PM Conformity Hot Spot Analysis
Project Summary Form for Interagency Consultation

The purpose of this form is to provide sufficient information to allow the Transportation Conformity Working Group (TCWG) to determine if a project requires a project-level PM hot spot analysis pursuant to Federal Conformity Regulations.

The form is not required under the following circumstances:

1. The project sponsor determines that a project-level PM hot spot analysis is required or otherwise elects to perform the analysis; or
2. The project does not require a project-level PM hot spot analysis since it:
   a. Is exempt pursuant to 40 CFR 93.126; or
   b. Is a traffic signal synchronization project under 40 CFR 93.128; or
   c. Uses no Federal funds AND requires no Federal approval; or
   d. Is located in a Federal PM attainment area (note: PM10 and PM2.5 areas differ).

Projects other than those listed above may or may not need a project-level PM hot spot analysis depending on whether it is considered a "Project of Air Quality Concern" (POAQC), and should be brought before the TCWG for a determination.

It is the responsibility of the project sponsor to ensure that the form is filled out completely and provides a sufficient level of detail for the TCWG to make an informed decision on whether or not a project requires a project-level PM hot spot analysis. For example, the TCWG will be reviewing the effects of the project, and thus part of the required information includes build/no build traffic data. It is also the responsibility of the project sponsor to ensure a representative is available to discuss the project at the TCWG meeting if necessary.

Instructions:
1) Fill out form in its entirety. Enter information in gray input fields.
2) Be sure to include FTIP ID#. See http://www.scaq.ca.gov/ftip/index.htm if necessary.
3) Submit completed form to your local Transportation Commission who will submit it to the MPO. Caltrans projects can be submitted by Caltrans District representatives.

The TCWG meets the fourth Tuesday of each month at SCAG Headquarters, 818 W. 7th Street, 12th Floor, Los Angeles, CA 90017. Participation is also available via teleconference. Call (213) 236-1800 prior to meeting to get the call-in number and pass-code.

Forms must be submitted by the second Tuesday of the month to be considered at that month’s TCWG meeting.
REFERENCE

Criteria for Projects of Air Quality Concern (40 CFR 93.123(b)) – PM_{10} and PM_{2.5} Hot Spots

(i) New highway projects that have a significant number of diesel vehicles, and expanded highway projects that have a significant increase in the number of diesel vehicles;

(ii) Projects affecting intersections that are at Level-of-Service D, E, or F with a significant number of diesel vehicles, or those that will change to Level-of-Service D, E, or F because of increased traffic volumes from a significant number of diesel vehicles related to the project;

(iii) New bus and rail terminals and transfer points that have a significant number of diesel vehicles congregating at a single location;

(iv) Expanded bus and rail terminals and transfer points that significantly increase the number of diesel vehicles congregating at a single location; and

(v) Projects in or affecting locations, areas, or categories of sites which are identified in the PM10 or PM2.5 applicable implementation plan or implementation plan submission, as appropriate, as sites of violation or possible violation.

TABLE 1
Type of Project

- New state highway
- Change to existing state highway
- New regionally significant street
- Change to existing regionally significant street
- New interchange
- Reconfigure existing interchange
- Intersection channelization
- Intersection signalization
- Roadway realignment
- Bus, rail, or inter-modal facility/terminal/transfer point
- Truck weight/inspection station
- At or affects location identified in the SIP as a site of actual or possible violation of NAAQS
Project Description (clearly describe project)

The project consists of widening the segment of Foothill Boulevard between Hemlock Avenue on the west and Almeria Avenue on the east from four lanes to six lanes, plus adding a median, sidewalks, buffered bicycle lanes, new street lights and a traffic signal at a currently unsignalized intersection. The Malaga Bridge over Foothill Boulevard – which historically carried a Pacific Electric (PE) interurban railway line and now is a pedestrian and bicycle bridge – may be relocated within the project limits. Malaga Bridge would be replaced over the widened Foothill Boulevard by a new single-span steel truss bridge to accommodate the six-lane facility.

**Project Purpose and Need (Summary):** *(attach additional sheets as necessary)*

**Project Purpose**

The purpose of the proposed project is to accomplish the following specific objectives:

- To enhance the safety and operations of Foothill Boulevard (reduce accidents).
- Eliminate roadway deficiencies (eliminate nonstandard roadway sections).
- Provide transportation improvements and bike lanes consistent with the City of Fontana’s General Plan Community Mobility and Circulation Element (close the gap).

These objectives would be accomplished by adding one lane in each direction from Hemlock Avenue to Almeria Avenue, providing a continuous six-lane facility to match the existing cross sections at Hemlock Avenue and Almeria Avenue. The project would provide bike lanes, sidewalks and a raised median as required by the City’s general plan for a modified major highway with a 120-foot section. To accommodate this section, the historic Malaga Bridge would need to be replaced with a longer span structure.

**Project Need**

**Safety and Operations:** Foothill Boulevard within the Malaga Bridge vicinity has a higher-than-average history of collisions due to the lack of horizontal clearance and limited sight distance. According to the collision data provided by the City of Fontana, between January 1, 2009 and October 2019, there were 253 collisions; 66 of those included injuries and nine included fatalities; total deaths were 13.

**Roadway Deficiencies:** The existing section of Foothill Boulevard within the project limits is a four-lane facility with no median, shoulders or sidewalks. The roadway is further reduced at the Malaga Bridge abutments; this is inconsistent with the City’s general plan and standards.

**Consistency with the General Plan:** Based on the general plan, Foothill Boulevard is required to accommodate a modified major highway with a 120-foot section. However, within the project limits, the average road width is only about 48 feet. In addition, Foothill Boulevard is designated as a truck route and the reduced section is not appropriate for truck traffic.

**Surrounding Land Use/Traffic Generators** *(especially effect on diesel traffic)*

The land uses within and surrounding the project study area consist primarily of residential and commercial operations along both sides of the highway.

**Describe potential traffic redistribution effects of congestion relief** *(impact on other facilities)*

The widening is intended to remove an existing bottleneck and improve safety along the segment of roadway from Hemlock Avenue to Almeria Avenue. As a result of the widening, the volume of traffic on segments of Foothill Boulevard on either side of Malaga Bridge will increase. LOS inside the project area will remain at B, whereas under the no-build case, it would remain at D. LOS east of the project boundary (Almeria to Citrus) will decline from A to C.
**Comments/Explanation/Details (attach additional sheets as necessary)**

Under 40 CFR 93.123(b)—PM10 and PM2.5 Hot Spots—the following criteria are utilized to determine the potential for a proposed project to qualify as a Project of Air Quality Concern (POAQC).

(i) **New or expanded highway projects that have a significant number of or significant increase in diesel vehicles, and expanded highway projects that have a significant increase in the number of diesel vehicles.** A significant number is defined as greater than 125,000 ADT and 8% or more of such ADT is diesel truck traffic, or in practice 10,000 truck ADT or more regardless of total ADT; a significant increase is defined in practice as a 10% increase in heavy duty truck traffic.

The proposed project is an expanded highway project. Total ADT will be less than 125,000 and truck ADT will be less than 10,000. In the opening year (2025), the project would increase the total truck ADT by up to 108 over the No-build Alternative. In the horizon year (2040), the project would increase the total truck ADT by up to 287 over the No-build Alternative. Therefore, the proposed project would not result in a significant increase in the number of diesel vehicles and would not be considered a Project of Air Quality Concern (POAQC) under this criterion.

(ii) **Projects affecting intersections that are at Level-of-Service D, E, or F with a significant number of diesel vehicles, or those that will change to Level-of-Service D, E, or F because of increased traffic volumes from a significant number of diesel vehicles related to the project.**

According to the traffic study for this project, five of the 10 intersections in the traffic study area currently have peak-hour LOS of D, E or F. None of these intersections has a significant number of diesel vehicles, as defined above. In the opening year without the project, six intersections would have a peak-hour LOS of D or E; with the project, the LOS would stay the same or improve (E to D). Finally, in the horizon year, five intersections in the traffic study area would have a peak-hour LOS of D or E; with the project, at one intersection, the AM peak-hour LOS would drop from C to D and at two intersections, the AM peak-hour LOS would improve from C to B and from D to C. At two intersections, the PM peak-hour LOS would improve from D to C. However, despite the one drop from C to D, the number of diesel trucks would not be significant. These traffic projections indicate that the project would not be considered a Project of Air Quality Concern under this criterion.

(iii) **New bus and rail terminals and transfer points that have a significant number of diesel vehicles congregating at a single location.**

The proposed project would not implement a new bus or retail terminal or transfer point at which diesel vehicles would be congregating. Therefore, the proposed project would not be considered a Project of Air Quality Concern under this criterion.

(iv) **Expanded bus and rail terminals and transfer points that significantly increase the number of diesel vehicles congregating at a single location.**

The proposed project does not involve expansion of a bus or rail terminal or transfer point. Therefore, the proposed project would not be considered a Project of Air Quality Concern under this criterion.

(iv) **Projects in or affecting locations, areas, or categories of sites which are identified in the PM10 or PM2.5 applicable implementation plan or implementation plan submission, as appropriate, as sites of violation or possible violation.**

The proposed project is not in or affecting a site of possible PM10 or PM2.5 air quality standard violation that is identified in the 2022 Air Quality Management Plan. Therefore, the proposed project would not be considered a Project of Air Quality Concern under this criterion.
