⁴ California Geological Survey. 2012. *Aggregate sustainability in California*. Available at: http://www.conservation.ca.gov/cgs/information/publications/ms/Documents/MS_52_2012.pdf

Government Code Section 65302(d)

Government Code Section 65302(d) states that a conservation element of the general plan shall address minerals and other natural resources.

Local

County and City General Plans

For the most part, local planning guidelines have been developed in county and city general plans to identify and encourage the utilization and conservation of mineral and energy resources, encourage sustainable management of resources, prevent or minimize adverse effects to the environment, and protect public health and safety. Pursuant to Government Code Section 65302, a general plan must include “A conservation element for the conservation, development, and utilization of natural resources including water and its hydraulic force, forests, soils, rivers and other waters, harbors, fisheries, wildlife, *minerals*, and other natural resources” (emphasis added). As discussed in **Section 3.11, *Land Use and Planning***, zoning codes implement the goals and objectives of General Plans.

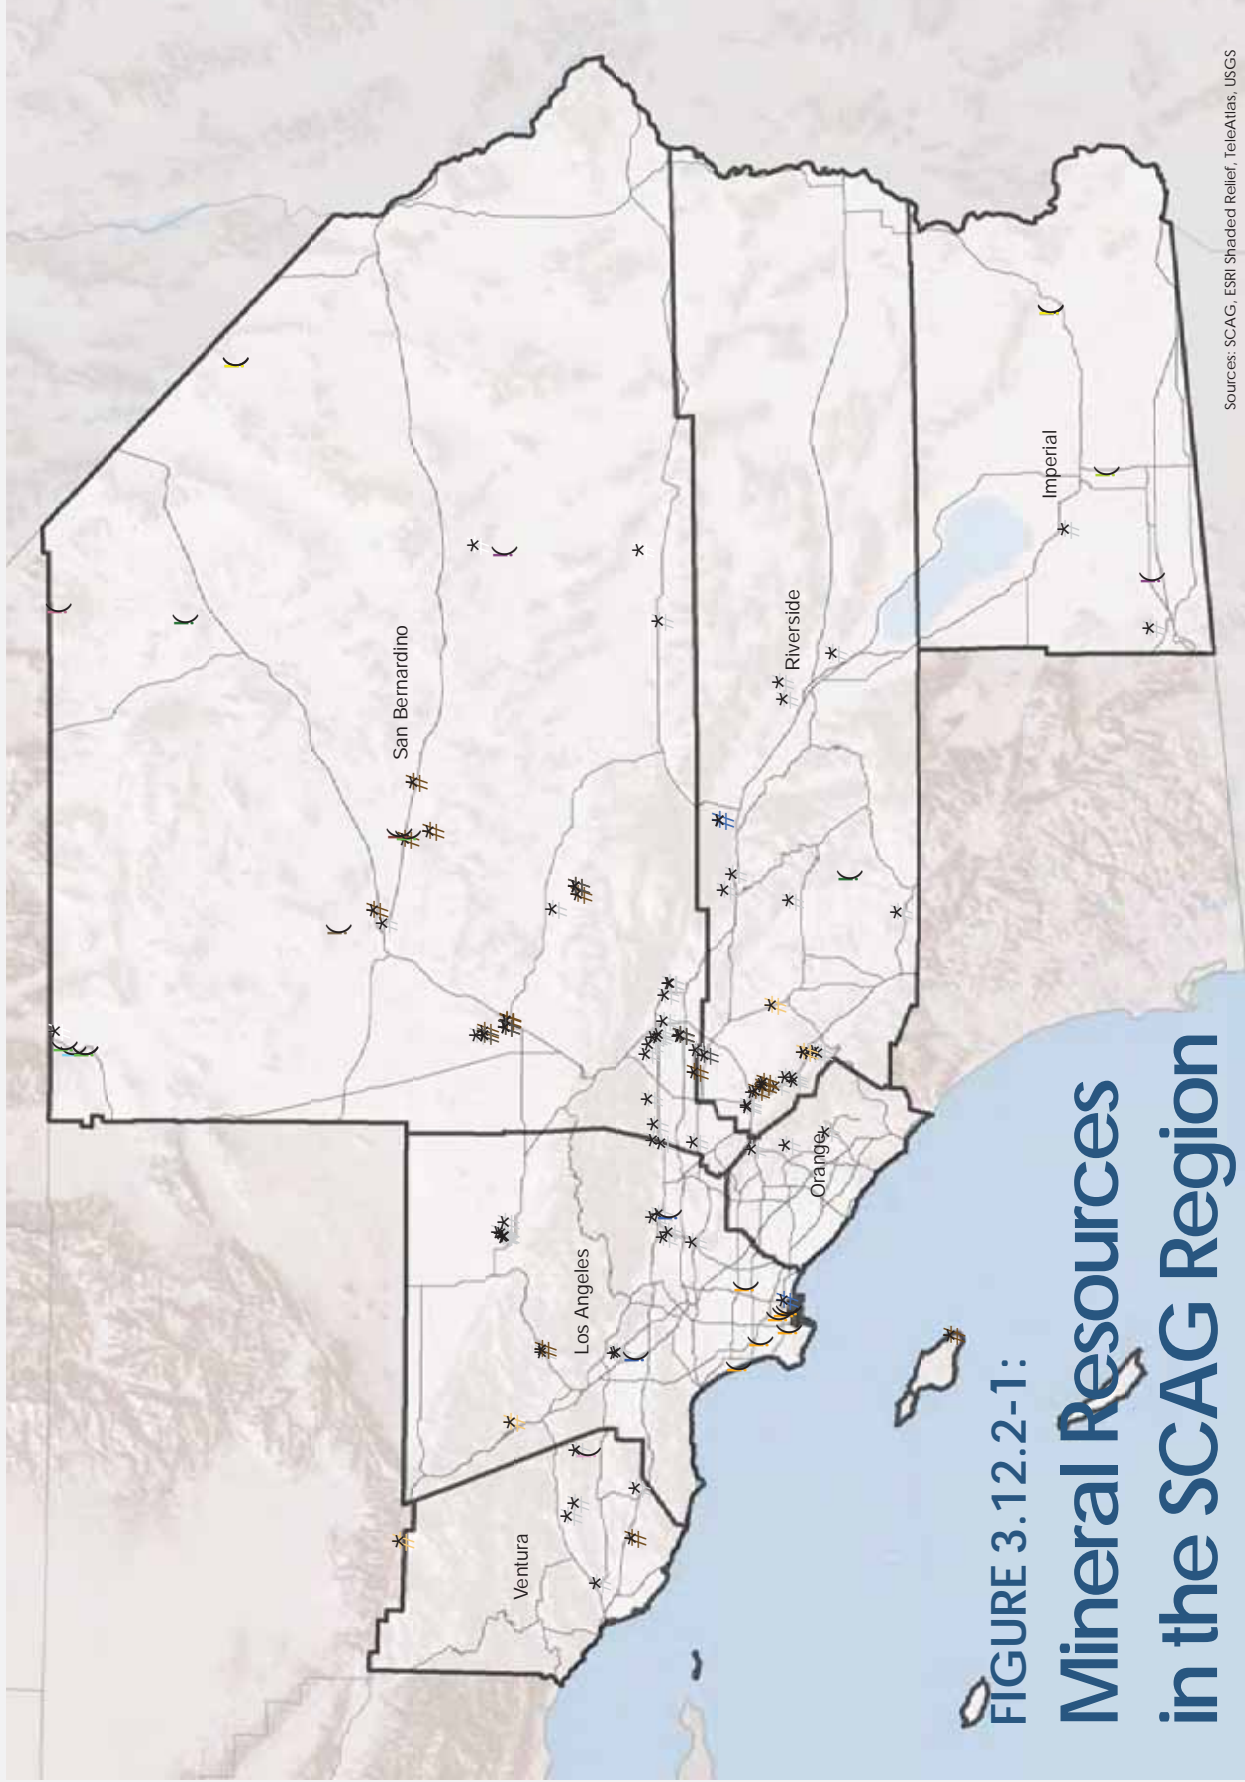

3.12.2 EXISTING CONDITIONS

Regionally Important Mineral Resources

County and city general plans are required to identify significant mineral resource areas and apply appropriate land use designations to ensure their future availability. Many city and county general plans in the SCAG region reference and map local mineral resources. Most of the comprehensive mineral resource mapping in California has been completed for urban areas where there is a high probability that converted land uses would be incompatible with mining. Gold, sand, and gravel are the primary mineral resources still extracted throughout the SCAG region (**Figure 3.12.2-1, *Mineral Resources in the SCAG Region***).

Construction aggregate refers to sand and gravel (natural aggregates) and crushed stone (rock) that are used as Portland-cement-concrete aggregate, asphaltic-concrete aggregate, road base, railroad ballast, riprap, and fill for the production of other construction materials. According to the CGS, the state currently has approximately 4.3 billion tons of permitted resources, and the CGS estimates the state would need approximately 13.5 billion tons of aggregate in the next 50 years.⁵ California’s construction industry is greatly dependent on readily available aggregate deposits that are within a reasonable distance to market regions. Aggregate is a low-unit-value, high-bulk-weight commodity; therefore, aggregate for construction must be obtained from nearby sources in order to minimize costs to the consumer. If nearby aggregate sources do not exist, then transportation costs can quickly exceed the value of the aggregate. The CGS prepares information regarding aggregate resources in the state (**Figure 3.12.2-2, *Aggregate Supply in the SCAG Region***).

Map Usage and Limitations
 This map is intended to provide general information about the current availability of California's permitted construction aggregate reserves to state, regional, and local land-use planners and decision makers. It is designed to assist planning agencies in considering construction aggregate needs in the regional planning process. However the map is not intended to be used as the sole source of information about construction aggregate availability, or as the basis for site-specific land-use decisions. Although the statewide and regional information on this map be useful to local decision makers, the more detailed information contained in the referenced aggregate studies should be used for local land-use decision making purposes.

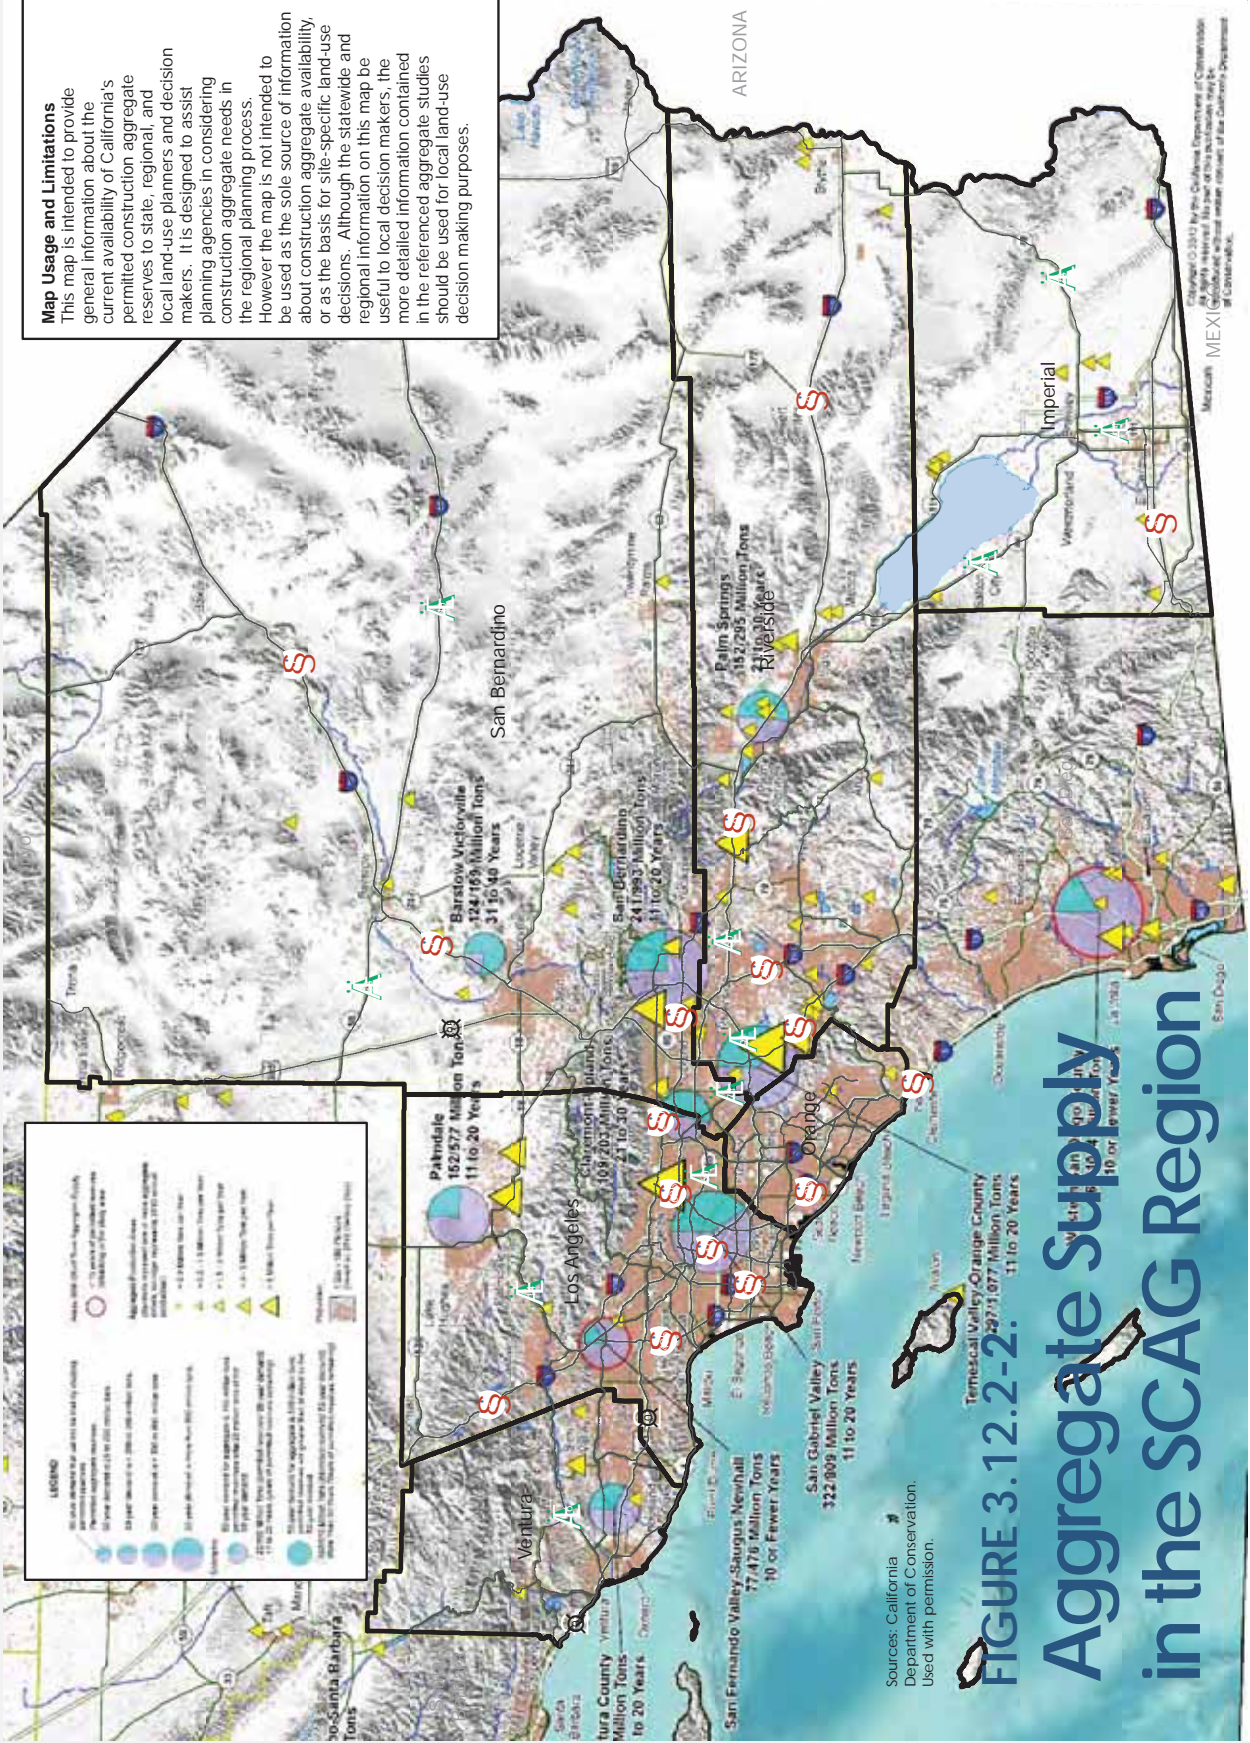

FIGURE 3.12.2-2: Aggregate Supply in the SCAG Region

Sources: California Department of Conservation. Used with permission.

The 50-year demand is based on a per capita consumption forecast, developed from historic data (Table 3.12.2-1, *Permitted Aggregate Resources and 50-Year Demand in the SCAG Region*). This method has been shown to be reasonably accurate in forecasting demand; it tends to smooth out spikes in demand that occur as a result of large-scale projects in a particular area. (It should be noted that although there are aggregate mines in Imperial County, the CGS does not provide permit and demand data for Imperial County.)

**TABLE 3.12.2-1
PERMITTED AGGREGATE RESOURCES AND 50-YEAR DEMAND IN THE SCAG REGION**

	County*	50-Year Demand (million tons)	Permitted Aggregate Reserves (million tons)	Permitted Aggregate Reserves Compared to 50-Year Demand (percent)	Projected Years Remaining
Claremont-Upland P-C Region	San Bernardino	203	109	54	21 to 30
Palmdale P-C Region	Los Angeles	577	152	26	11 to 20
Palm Springs P-C Region	Riverside	295	152	52	21 to 30
San Bernardino P-C Region	San Bernardino	993	241	24	11 to 20
San Fernando Valley/Saugus-Newhall	Los Angeles	476	77	16	10 or fewer
San Gabriel Valley P-C Region	Los Angeles	809	322	40	11 to 20
Temescal Valley-Orange County	Orange	1,077	297	28	11 to 20
Ventura County	Ventura	298	96	32	11 to 20
Total SCAG Region		4,728	1,446	N/A	N/A

NOTE:

*Aggregate reserves not analyzed for Imperial County.

SOURCE:

California Department of Conservation, California Geological Survey. Accessed 11 September 2015. *Aggregate Sustainability in California*. Available at: http://www.conservation.ca.gov/cgs/information/publications/ms/Documents/MS_52.pdf

Just under one-third of the projected 50-year demand is currently permitted in the SCAG region, exclusive of mines in Imperial County (Table 3.12.2-1). The CGS estimates that there are up to 74 billion tons of nonpermitted resources state-wide. Nonpermitted aggregate resources are deposits that may meet specifications for construction aggregate, are recoverable with existing technology, have no land overlying them that is incompatible with mining, and currently are not permitted for mining. Resource areas include areas that are known to contain aggregate resources and have compatible land uses such as agricultural land, open space lands (not designated as parks), and forest lands. Uses that are considered incompatible with mining include urban areas, county and state parks, national parks, and golf courses.

The estimated nonpermitted resources in the region are in excess of 37 million tons. While the estimated amount of nonpermitted resources is large, it is unlikely that all of these resources would ever be mined because of social, environmental, or economic factors. Aggregate resources located too close to urban or environmentally sensitive areas can limit or stop their development. These resources may also be located too far from a potential market to be economically viable. In spite of such possible

constraints, current nonpermitted aggregate resources are the most likely future sources of construction aggregate potentially available to meet California's continuing demand.

3.12.3 THRESHOLDS OF SIGNIFICANCE

The 2016 RTP/SCS would have a significant impact related to mineral resources if it would have the potential to:

- Result in the loss of availability of a known mineral resource that would be of value to the region and the residents of the state.
- Result in the loss of availability of a locally important mineral resource recovery site delineated on a local general plan, specific plan or other land use plan.

Methodology

The methodology for determining the significance of impacts on mineral resources impacts compares the existing conditions (2015) to the future 2040 conditions under the Plan, as required by CEQA Guidelines Section 15126.2(a). Specifically, the volume of aggregate material likely to be required to support the transportation projects and urban development encouraged by land use strategies in the 2016 RTP/SCS was evaluated in relation to availability of permitted mineral resources, and other potential mineral resource recovery sites in the SCAG region.

3.12.4 IMPACT ANALYSIS

IMPACT MIN-1: Potential to result in the loss of availability of a known mineral resource that would be of value to the region and the residents of the state.

Significant Impact

Transportation projects as well as development patterns influenced by land use strategies identified in the 2016 RTP/SCS would require substantial amounts of aggregate resources to construct, constituting a significant impact. The six-county and 191-city SCAG region has approximately 1,446 million tons of permitted aggregate reserves (Table 3.12.2-1). The CGS estimates that the SCAG region would need approximately 4,728 million tons of aggregate over the next 50 years.⁶ The difference of 3,282 million tons would need to be permitted over the next 50 years to meet the projected demand. Table 3.12.2-1 indicates that, of the eight areas of permitted aggregate resources, six have a minimum of 10 to 11 projected years remaining, and two have a minimum of 21 projected years remaining. The SCAG region's construction industry is greatly dependent on readily available aggregate deposits that are within a reasonable distance to market regions. Aggregate is a low-unit-value, high-bulk-weight commodity or material required for construction of most transportation projects and development projects that must be obtained from nearby sources in order to minimize costs to the consumer. If nearby sources do not exist, then transportation costs quickly could exceed the value of the aggregate.

⁶ California Department of Conservation, California Geological Survey. Accessed 11 September 2015. *Aggregate Sustainability in California*. Available at: http://www.conservation.ca.gov/cgs/information/publications/ms/Documents/MS_52.pdf

Figure 3.12.2-1 shows the 50-year demand that would not be met in aggregate production areas in and around the SCAG region. Additionally, Table 3.12.2-1 shows that just under one-third of the projected 50-year demand is currently permitted in the SCAG region (excluding mines in Imperial County). The 2016 RTP/SCS includes transportation system improvements, such as new or expanded highway/arterials, high-occupancy vehicle (HOV) lanes and connectors, new light and heavy rail, goods movement projects, and infrastructure that would require substantial amounts of aggregate resources. In addition, the regional land use strategies identified in the 2016 RTP/SCS could influence population distribution by focusing growth in HQTAs, existing suburban town centers, and more walkable, mixed-use communities. The development projects encouraged by these land use strategies included in the 2016 RTP/SCS could also result in a demand for aggregate resources for construction.

As a programmatic, long-range planning document, the 2016 RTP/SCS does not include specific construction information related to large transportation projects. However, it is anticipated that the transportation projects included in the 2016 RTP/SCS and anticipated development could require substantial amounts of aggregate resources to construct. Therefore, impacts would be significant, requiring the consideration of mitigation measures.

IMPACT MIN-2: Potential to result in the loss of availability of a locally important mineral resource recovery site delineated on a local general plan, specific plan or other land use plan.

Significant Impact

The 2016 RTP/SCS includes transportation projects that have the potential to impact mineral resources because they could take place in previously undisturbed areas, and development patterns encouraged by land use strategies identified in the 2016 RTP/SCS have the potential to occur in mineral resource zones, constituting a potentially significant impact. Improvements and modifications to existing rights-of-way, such as HOV lanes, high-occupancy toll (HOT) lanes, new bus-ways and capacity enhancement facilities, mixed flow lanes, and right-of-way maintenance would have less potential to impact mineral resources because these transportation project locations have previously been disturbed. Construction of new transportation projects, like additional lanes and right-of-way maintenance, have the potential to impact aggregate and mineral resources.

As this PEIR analyzes impacts to mineral resources on a programmatic level only, it is anticipated that as individual projects are evaluated, the scope of analysis would require a determination regarding the potential for a project to result in the loss of availability of a locally important mineral resource recovery site delineated on a local general plan, specific plan, or other land use plan. Construction of transportation projects and new development influenced and encouraged by land use strategies (e.g., focusing new growth in the region's high-quality transit areas, or HQTAs) included in the 2016 RTP/SCS would result in a potentially significant impacts, requiring the consideration of mitigation measures.

3.12.5 CUMULATIVE IMPACTS

IMPACT MIN-1: Potential to result in the loss of availability of a known mineral resource that would be of value to the region and the residents of the state.

Significant Cumulative Impact

Implementation of the transportation projects included in the 2016 RTP/SCS, when taken into consideration with related development and infrastructure projects within the SCAG region and surrounding areas, and anticipated growth and land use development pattern, would contribute to significant cumulative impacts with regard to the potential to result in the loss of availability of a known mineral resource that would be of value to the region and the residents of the state. Similarly, the 2016 RTP/SCS includes a set of regional land use strategies that are intended to guide future land development patterns to focus new growth in HQTAs, existing suburban town centers, and walkable mixed-use communities. While the specific impact of this pattern of development relative to the loss of a known mineral resource is unknown, it could result in cumulative significant impacts. As a programmatic, long-range planning document, the 2016 RTP/SCS does not include specific construction information related to major transportation projects. However, it is anticipated that the transportation projects included in the 2016 RTP/SCS and anticipated development could require substantial amounts of aggregate resources to construct.

Figure 3.12.2-1 shows the 50-year demand that would not be met in aggregate production areas in and around the SCAG region. Additionally, Table 3.12.2-1 shows that just under one-third of the projected 50-year demand is currently permitted in the SCAG region (excluding mines in Imperial County). The 2016 RTP/SCS includes transportation system improvements, such as new or expanded highway/arterials, HOV lanes and connectors, new light and heavy rail, goods movement projects, and infrastructure associated with these projects that would require substantial amounts of aggregate resources. In addition, the mobility and regional land use policies identified in the 2016 RTP/SCS would influence population distribution by focusing growth in HQTAs, existing suburban town centers, and more walkable, mixed-use communities. The development projects encouraged by these land use strategies included in the 2016 RTP/SCS as well as anticipated development would also result in a demand for aggregate resources for construction. Construction of the 2016 RTP/SCS transportation projects and development patterns influenced by land use strategies, when considered with other anticipated infrastructure, residential, and commercial development in the SCAG region, would contribute to cumulative impacts to mineral resources of statewide and local importance in the region, constituting a significant cumulative impact requiring the consideration of mitigation measures.

IMPACT MIN-2: Potential to result in the loss of availability of a locally important mineral resource recovery site delineated on a local general plan, specific plan or other land use plan.

Significant Cumulative Impact

Implementation of the transportation projects included in the 2016 RTP/SCS, when taken into consideration with related development and infrastructure projects within the SCAG region and surrounding areas, and anticipated growth and land use development patterns, would contribute to

cumulative significant impacts with regard to the potential to result in the loss of availability of a locally important mineral resource recovery site delineated on a local general plan, specific plan, or other land use plan. The 2016 RTP/SCS transportation projects and associated development patterns influenced by land use strategies could be constructed atop mineral resources, impeding access to these resources, exacerbating the availability of regional and locally important mineral resource recovery sites. Given the potential for permitted resources to not meet demand both inside and outside the SCAG region, the 2016 RTP/SCS would contribute to a cumulatively significant impact, requiring the consideration of mitigation measures.

3.12.6 MITIGATION MEASURES

Mitigation measures as they pertain to each CEQA question related to mineral resources are described below. Mitigation measures are categorized into two categories: SCAG mitigation and project-level mitigation measures. SCAG mitigation measures shall be implemented by SCAG over the lifetime of the 2016 RTP/SCS. Project-level mitigation measures can and should be implemented by Lead Agencies for transportation and development projects, as applicable and feasible.

IMPACT MIN-1: Potential to result in the loss of availability of a known mineral resource that would be of value to the region and the residents of the state.

SCAG Mitigation Measures

MM-MIN-1(a)(1): SCAG shall coordinate with the Department of Conservation, California Geological Survey to maintain a database of (1) available mineral resources in the SCAG region including permitted and unpermitted aggregate resources and (2) the anticipated 50-year demand for aggregate and other mineral resources. Based on the results of this survey, SCAG shall work with local agencies on strategies to address anticipated demand, including identifying future sites that may seek permitting and working with industry experts to identify ways to encourage and increase recycling to reduce the demand for aggregate.

MM-MIN-1(a)(2): SCAG shall facilitate, encourage, and coordinate with local jurisdictions to review, identify, and update aggregate and mineral resources in their jurisdictions through cooperation, information sharing, and regional program development as part of SCAG's ongoing regional planning efforts, such as web-based planning tools for local government including CA Lots, and other GIS tools and data services, including, but not limited to, Map Gallery, GIS library, and GIS applications, and direct technical assistance efforts such as Compass Blueprint's Toolbox Tuesday Training series and sharing of associated online training materials. Resource agencies, such as the California Department of Conservation and the U.S. Geology Survey shall be consulted during this update process. Using the above tools, SCAG shall assist local jurisdictions with developing long range plans and strategies to meet projected demand and ensure that transportation projects and associated development do not preclude the ability to recover known aggregate resources that would be of value to the region and the residents of the state.

Project-Level Mitigation Measures

MM-MIN-1(b): Consistent with the provisions of Section 15091 of the State CEQA Guidelines, SCAG has identified mitigation measures capable of avoiding or reducing the significant effects on the loss of availability of a known mineral resource that would be of value to the region and the residents of the state or a locally important mineral resource recovery site delineated on a local general plan, specific plan or other land use plan that are within the jurisdiction and responsibility of the California Department of Conservation, and/or Lead Agencies.

Where the Lead Agency has identified that a project has the potential for significant effects, the Lead Agency can and should consider mitigation measures to ensure compliance with SMARA, California Department of Conservation regulations, local general plans, specific plans, and other laws and regulation governing mineral or aggregate resources, as applicable and feasible. Such measures may include the following, other comparable measures identified by the Lead Agency:

- Provide for the efficient use of known aggregate and mineral resources or locally important mineral resource recovery sites, by ensuring that the consumptive use of aggregate resources is minimized and that access to recoverable sources of aggregate is not precluded, as a result of construction, operation and maintenance of projects.
- Where avoidance is infeasible, minimize impacts to the efficient and effective use of recoverable sources of aggregate through measures that have been identified in county and city general plans, or other comparable measures:
 - Recycle and reuse building materials resulting from demolition, particularly aggregate resources, to the maximum extent practicable.
 - Identify and use building materials, particularly aggregate materials, resulting from demolition at other construction sites in the SCAG region, or within a reasonable hauling distance of the project site.
 - Design transportation network improvements in a manner (such as buffer zones or the use of screening) that does not preclude adjacent or nearby extraction of known mineral and aggregate resources following completion of the improvement and during long-term operations.
 - Avoid or reduce impacts on known aggregate and mineral resources and mineral resource recovery sites through the evaluation and selection of project sites and design features (e.g., buffers) that minimize impacts on land suitable for aggregate and mineral resource extraction by maintaining portions of MRZ-2 areas in open space or other general plan land use categories and zoning that allow for mining of mineral resources.

IMPACT MIN-2: Potential to result in the loss of availability of a locally important mineral resource recovery site delineated on a local general plan, specific plan or other land use plan.

SCAG Mitigation Measures

MM-MIN-1(a)(1) and MM-MIN-1(a)(2).

Project-Level Mitigation Measures

MM-MIN-1(b).

3.12.7 LEVEL OF SIGNIFICANCE AFTER MITIGATION

IMPACT MIN-1: Potential to result in the loss of availability of a known mineral resource that would be of value to the region and the residents of the state.

Implementation of Mitigation Measures MM-MIN-1(a)(1), MM-MIN-1(a)(2), and MM-MIN-1(b) would reduce potential impacts related to the loss of availability of a known mineral resource that would be of value to the region and the residents of the state. However, due to the substantial growth and large number of transportation and development projects anticipated direct, indirect, and cumulative impact would remain significant and unavoidable.

IMPACT MIN-2: Potential to result in the loss of availability of a locally important mineral resource recovery site delineated on a local general plan, specific plan or other land use plan.

Implementation of Mitigation Measures MM-MIN-1(a)(1), MM-MIN-1(a)(2), and MM-MIN-1(b) would reduce potential impacts related to the loss of availability of a locally important mineral resource recovery site delineated on a local general plan, specific plan, or other land use plan. However, due to the substantial growth and large number of transportation and development projects anticipated, direct, indirect, and cumulative impacts would remain significant and unavoidable.

3.13 NOISE

This section of the Program Environmental Impact Report (PEIR) describes the ambient noise characteristics of the SCAG region, discusses the potential impacts of the proposed 2016 Regional Transportation Plan/Sustainable Communities Strategy (2016 RTP/SCS, “Plan,” or “Project”) on ambient noise levels, identifies mitigation measures for the impacts, and evaluates the residual impacts. Noise was evaluated in accordance with Appendix G of the 2015 State California Environmental Quality Act (CEQA) Guidelines. Noise within the SCAG region was evaluated at the programmatic level of detail, in relation to federal noise and vibration impacts guidelines; *State of California General Plan Guidelines for Noise Elements*; California Department of Transportation guidance documents; the general plans of the six counties and 191 cities within the SCAG region; and a review of related literature germane to the SCAG region, as well as a review of SCAG’s 2012 RTP/SCS PEIR.^{1,2,3,4,5,6,7,8,9}

Ambient noise levels in the SCAG region vary widely as a function of the dramatic physical environment, land use, and density of people. Noise levels for various areas are identified according to the use of the area. Maximum allowable noise levels associated with various sensitive land uses are provided. Exposure of people to noise levels and ground borne vibration from transportation and transit infrastructure varies in relation to noise level at the source, density of the source, distance from the source, and sound modulating or attenuating structures between the source and the receptor.

Definitions

The definitions for noise and ground-borne vibration are discussed in this section to provide context for the evaluation of noise.

Noise and Vibration Terminology

A list of noise terminology is included to facilitate the discussion of noise and its impacts.

A-weighting: This is the method commonly used to quantify environmental noise that involves evaluation of all frequencies of sound, with an adjustment to reflect the constraints of human hearing. Because the human ear is less sensitive to low and high frequencies than to midrange frequencies, noise measurements are weighted more heavily within those frequencies of maximum human sensitivity in a process called A-weighting (dBA).

Ambient: Ambient is the total noise in the environment, excluding noise from the source of interest.

Community noise equivalent level (CNEL): CNEL represents the average daytime noise level during a 24-hour day, adjusted to an equivalent level to account for people's lower tolerance of noise during the evening and nighttime hours. Because community receptors are more sensitive to unwanted noise intrusion during the evening and night, an artificial decibel increment is added to quiet-time noise levels. Sound levels are increased by 5 dBA during the evening, from 7:00 p.m. to 10:00 p.m. and by 10 dBA during the nighttime, from 10:00 p.m. to 7:00 a.m. during this quiet time period.

Day-night equivalent level (L_{dn}): L_{dn} is a measure of the 24-hour average noise level at a given location. It is based on a measure of the L_{eq} noise level over a given time period. The L_{dn} is calculated by averaging the L_{eq} for each hour of the day at a given location after penalizing the "sleeping hours" (defined as 10:00 p.m. to 7:00 a.m.), by 10 dBA to account for the increased sensitivity of people to noises that occur at night. L_{dn} is also referred to as day-night average (DNL) sound level in some cases.

Decibel (dB): dB is a unitless measure of sound on a logarithmic scale that indicates the squared ratio of sound pressure amplitude to a reference sound pressure amplitude. The reference pressure is 20 micropascals.

Equivalent sound level (L_{eq}): L_{eq} is a term typically used to express time averages. It is a steady-state energy level that is equivalent to the energy content of a varying sound level over a stated period of time, which means that the L_{eq} represents the noise level experienced over a stated period of time averaged as a single noise level.

Frequency: Frequency is the number of cycles per unit of time (seconds), expressed in hertz (Hz).

Noise: Noise is any sound that annoys or disturbs humans or that causes or tends to cause an adverse psychological or physiological effect on humans. Any unwanted sound.

Noise level (L_N): Another measure used to characterize noise exposure, L_N is the variation in sound levels over time, measured by the percentage exceedance level. L_{10} is the A-weighted sound level that is exceeded for 10 percent of the measurement period, and L_{90} is the level that is exceeded for 90 percent of the measurement period. L_{50} is the median sound level. Additional statistical measures include L_{min} and L_{max} , the minimum and maximum sound levels, respectively, measured during a stated measurement period.

Peak Particle Velocity (PPV): Defined as the maximum instantaneous positive or negative peak of the vibration signal, usually measured in inches per second (in/sec).

Sound: A vibratory disturbance created by vibrating objects, which, when transmitted by pressure waves through a medium such as air, is capable of being detected by a receiving mechanism, such as the human ear or a microphone.

Vibration: Vibration is the mechanical motion of earth or ground, building, or other type of structure, induced by the operation of any mechanical device or equipment located upon or affixed thereto. For purposes of this report, the magnitude of the vibration shall be stated as the acceleration in “g” units (1 g is equal to 32.2 feet/second², or 9.81 meters/second²).

Noise Measurement

Noise is defined as unwanted sound. The human response to environmental noise is subjective and varies considerably from individual to individual. Sensitive receptors, such as residential areas, convalescent homes, schools, auditoriums, and other similar land uses, may be affected to a greater degree by increased noise levels than industrial, manufacturing, or commercial facilities. The effects of noise can range from interference with sleep, concentration, and communication, to the causation of physiological and psychological stress, and at the highest intensity levels, hearing loss.¹⁰

The method commonly used to quantify environmental noise involves evaluation of all frequencies of sound, with an adjustment to reflect the constraints of human hearing. Since the human ear is less sensitive to low and high frequencies than to midrange frequencies, noise measurements are weighted more heavily within those frequencies of maximum human sensitivity in a process called “A-weighting,” written as dBA. In practice, environmental noise is measured using a sound level meter that includes an electronic filter corresponding to the A-weighted frequency spectrum. Typical examples can be used to illustrate sound sources that correlate to measure A-weighted sound levels and the subjective loudness to a person (Table 3.13-1, *Common Sound Levels and Loudness*).

¹⁰ U.S. Environmental Protection Agency, Office of Noise Abatement and Control. August 1978. *Noise: A Health Problem*. Washington, DC.

**TABLE 3.13-1
COMMON SOUND LEVELS AND LOUDNESS**

Decibel (dB)	Subjective Loudness	Source of Sound
130	Threshold of pain	Military jet aircraft take-off from aircraft carrier with afterburner at 50 feet
120	Uncomfortably loud	Turbo-fan aircraft at takeoff power at 200 feet; rock band
110		
100	Very loud	Boeing 707 or DC-8 aircraft at 1 nautical mile (6,080 feet) before landing; jet flyover at 1,000 feet; Bell J-2A helicopter at 100 feet
90		Boeing 737 or DC-9 aircraft at 1 nautical mile before landing; power mower; motorcycle at 25 feet; car wash at 20 feet
80		High urban ambient sound; diesel truck at 40 mph at 50 feet; diesel train at 45 mph at 100 feet; passenger car at 65 mph at 25 feet; food blender; garbage disposal
70	Moderately loud	Living room music; radio or TV audio; vacuum cleaner
60		Air conditioning unit at 100 feet; dishwasher (rinse) at 10 feet; conversation
50	Quiet	Large transformers at 100 feet
40		Bird calls; lowest limit of urban ambient sound
30		
20		Quiet living room
10	Just audible	Average whisper
0	Threshold of hearing

Vibration Measurement

Vibration is an oscillatory motion in terms of displacement, velocity, or acceleration. Vibration is typically measured as peak particle velocity (PPV) in inches per second. In this context, vibration refers to the minimum ground- or structure-borne motion that causes a normal person to be aware of the vibration by means such as, but not limited to, sensation by touch or visual observation of moving objects. The effects of ground-borne vibration include movements of the building floors that can be felt, rattling of windows, and shaking of items on shelves or hangings on the walls. In extreme cases, vibration can cause damage to buildings. The noise radiated from the motion of the room surfaces is called ground-borne noise (Table 3.13-2, *Typical Levels of Ground-Borne Vibration*). The vibration motion normally does not provoke the same adverse human reactions as the noise unless there is an effect associated with the shaking of the building. In addition, the vibration noise can only occur inside buildings. Similar to the propagation of noise, vibration propagated from the source to the receptor depends on the receiving building (i.e., the weight of the building), soil conditions, layering of the soils, the depth of groundwater table, and so forth.

**TABLE 3.13-2
TYPICAL LEVELS OF GROUND-BORNE VIBRATION**

Response	Velocity Level*	Typical Sources (at 50 feet)
Minor cosmetic damage of fragile buildings	100	Blasting from construction projects
Difficulty with tasks such as reading a video display terminal (VDT) screen	90	Bulldozers and other heavy tracked construction equipment
Residential annoyance, infrequent events	80	Rapid transit, upper range
Residential annoyance, frequent events	70	High speed rail, typical
Approximate threshold for human perception	60	Bus or truck, typical
	50	Typical background vibration

NOTE:

* Root mean square (RMS) vibration velocity level in VdB relative to 10⁻⁶ inches/second

Nelson, J.T., and H.J. Saurenman. December 1983. *State-of-the-Art Review: Prediction and Control of Ground-Borne Noise and Vibration from Rail Transit Trains*. U.S. Department of Transportation, Urban Mass Transportation Administration, Report Number UMTA-MA-06-0049-83-4, DOT-TSC-UMTA-83-3.

3.13.1 REGULATORY FRAMEWORK

The federal government sets noise standards for transportation-related noise sources that are closely linked to interstate commerce, such as aircraft, locomotives, and trucks; and, for those noise sources, the state government is preempted from establishing more stringent standards. The state sets noise standards for those transportation noise sources that are not preempted from regulation, such as automobiles, light trucks, and motorcycles. Noise sources associated with industrial, commercial, and construction activities are generally subject to local control through noise ordinances and general plan policies.

Federal

Noise Control Act of 1972

The Noise Control Act of 1972, as codified in 42 U.S. Code §4901 et seq., establishes a means for effective coordination of federal research and activities in noise control, authorizes the establishment of federal noise emission standards for products distributed in commerce, and provides information to the public with respect to the noise emission and noise reduction characteristics of such products.

Title 40 of the Code of Federal Regulations (40 CFR 201, 40 CFR 205, 49 CFR 210)

The Federal Highway Administration sets federal regulations related to noise limits for aircraft, locomotives, and medium and heavy trucks, and standards for noise studies and studies for federal and federal-aid highway projects.

Parts 201 and 210

Federal regulations for railroad noise are contained in Title 40 of the Code of Federal Regulations (CFR) Part 201 and 49 CFR Part 210. The regulations set noise limits for locomotives and are implemented through regulatory controls on locomotive manufacturers.

Part 205

Federal regulations also establish noise limits for medium and heavy trucks (more than 4.5 tons, gross vehicle weight rating) under 40 CFR Part 205, Subpart B. The federal truck pass-by noise standard is 80 decibels (dB) at 15 meters from the vehicle pathway centerline. These controls are implemented through regulatory controls on truck manufacturers. The Federal Highway Administration (FHWA) regulations for noise abatement must be considered for federal or federally funded projects involving the construction of a new highway or significant modification of an existing freeway when the project would result in a substantial noise increase or when the predicted noise levels approach or exceed the Noise Abatement Criteria (NAC).

Title 23 of the Code of Federal Regulations

Title 23 CFR § 772 provides procedures for preparing operational and construction noise studies and evaluating noise abatement considered for federal and federal-aid highway projects. Under 23 CFR §

772.7, projects are categorized as Type I or Type II projects. FHWA defines a Type I project as a proposed federal or federal-aid highway project for the construction of a highway on a new location, or the physical alteration of an existing highway that significantly changes either the horizontal or vertical alignment, or increases the number of through-traffic lanes. A Type II project is a noise barrier retrofit project that involves no changes to highway capacity or alignment.

Type I projects include those that create a completely new noise source, as well as those that increase the volume or speed of traffic or move the traffic closer to a receiver. Type I projects include the addition of an interchange, ramp, auxiliary lane, or truck-climbing lane to an existing highway, or the widening an existing ramp by a full lane width for its entire length. Projects unrelated to increased noise levels such as striping, lighting, signing, and landscaping projects are not considered Type I projects.

Under Title 23 CFR § 772.11, noise abatement must be considered for Type I projects if the project is predicted to result in a traffic noise impact. In such cases, 23 CFR § 772 requires that the project sponsor consider noise abatement before adoption of the environmental document. This process involves identification of noise abatement measures that are reasonable, feasible, and likely to be incorporated into the project, and of noise impacts for which no apparent solution is available.

Traffic noise impacts, as defined in 23 CFR § 772.5, occur when the predicted noise level in the design year approaches or exceeds the NAC specified in 23 CFR § 772, or a predicted noise level substantially exceeds the existing noise level (a substantial noise increase). Under these regulations, an impact could result unrelated to the plan if existing noise levels already exceed the NAC. A *substantial increase* is defined as when an increase in L_{eq} of 12 dB during the peak hour of traffic noise occurs. For sensitive uses, such as residences, schools, churches, parks, and playgrounds, the NAC for interior and exterior spaces is L_{eq} 57 and 66 dB, respectively, during the peak hour of traffic noise.

Title 14 Code of Federal Regulations, Part 36

The Federal Aviation Administration (FAA) has federal regulatory authority over noise emissions levels by aircraft operated in the United States. These requirements are set forth in Title 14 CFR, Part 36. Part 36 establishes maximum acceptable noise levels for specific aircraft types, taking into account the model year, aircraft weight, and number of engines. Pursuant to the federal Airport Noise and Capacity Act of 1990, the FAA established a schedule for complete transition to Part 36 “Stage 3” standards by year 2000. This transition schedule applies to jet aircraft with a maximum takeoff weight in excess of 75,000 pounds, and thus applies to passenger and cargo airlines, but not to operators of business jets or other general aviation aircraft.

Title 14 Code of Federal Regulations, Part 150

Part 150 applies to airport noise compatibility planning and provides the procedures, standards, and methodology governing the development, submission, and review of airport noise exposure maps and airport noise compatibility programs, including the process for evaluating and approving or disapproving those programs. It provides guidance for measuring noise at airports and surrounding areas and for determining exposure of individuals to noise from the operations of an airport. Part 150 also identifies land uses that are normally compatible with various levels of exposure to noise by individuals. It provides guidance on the preparation and execution of noise compatibility planning and implementation programs.

Noise Abatement and Control, Title 24 Code of Federal Regulations, Part 51, Subpart B

The mission of Department of Housing and Urban Development (HUD) includes fostering “a decent, safe, and sanitary home and suitable living environment for every American.” Accounting for acoustics is intrinsic to this mission, as an environment’s safety and comfort can be compromised by excessive noise. In order to facilitate the creation of suitable living environments, HUD has developed a standard for noise criteria. The basic foundation of the HUD noise program is set out in the noise regulation 24 CFR Part 51 Subpart B, Noise Abatement and Control.

HUD’s noise policy clearly requires noise attenuation measures be provided when proposed projects are to be located in high noise areas. Within the HUD Noise Assessment Guidelines, potential noise sources are examined for projects located within 15 miles of a military or civilian airport, 1,000 feet from a road, or 3,000 feet from a railroad.

HUD exterior noise regulations state that 65 dBA DNL noise levels or less are acceptable for residential land uses and noise levels exceeding 75 dBA DNL are unacceptable. HUD’s regulations do not contain standards for interior noise levels. Rather, a goal of 45 dBA is set forth, and the attenuation requirements are geared toward achieving that goal. It is assumed that, with standard construction, any building will provide sufficient attenuation so that if the exterior level is 65 dBA DNL or less, the interior level will be 45 dBA DNL or less.

Federal Transit Administration Noise and Vibration Guidance

The Federal Transit Administration (FTA) has published the *Transit Noise and Vibration Impact Assessment*¹¹ report to provide guidance on procedures for assessing impacts at different stages of transit project development. The report covers both construction and operational noise impacts, and describes a range of measures for controlling excessive noise and vibration. The specified noise criteria are an earlier version of the criteria provided by the Federal Railroad Administration’s High-Speed Ground Transportation Noise and Vibration Impact Assessment (Table 3.13.1-1). In general, the primary concern regarding vibration relates to potential damage from construction. The guidance document establishes criteria for evaluating the potential for damage for various structural categories from vibration (Table 3.13-3, *Construction Vibration Damage Criteria*).

**TABLE 3.13-3
CONSTRUCTION VIBRATION DAMAGE CRITERIA**

Building Category	PPV (in/sec)
I. Reinforced-concrete, steel or timber (no plaster)	0.5
II. Engineered concrete and masonry (no plaster)	0.3
III. Non-engineered timber and masonry buildings	0.2
IV. Buildings extremely susceptible to vibration damage	0.12

Railroad Noise Guidance

The Federal Railroad Administration provides implementation procedures for predicting and assessing noise and vibration impacts of high-speed trains within their *High-Speed Ground Transportation Noise and Vibration Impact Assessment*.¹² The document provides three levels of analysis, including a preliminary impact screening, a general assessment, and a detailed analysis, as well as a range of mitigation measures for dealing with adverse noise and vibration impacts. The report also includes noise criteria for potential impacts (Table 3.13.1-1, *Noise Levels Defining Impact for High-Speed Train Projects*, and Table 3.13.1-2, *Land Use Categories and Metrics for High-Speed Train Noise Impact Criteria*).

**TABLE 3.13.1-1

Federal Railroad Administration. September 2012. *High-Speed Ground Transportation Noise and Vibration Impact Assessment*. Final Report. Table 3-1. Washington, DC.

**TABLE 3.13.1-2
LAND USE CATEGORIES AND METRICS FOR HIGH-SPEED TRAIN NOISE IMPACT CRITERIA**

Land-Use Category	Noise Metric (dBA)	Description of Land-Use Category
1	Outdoor L _{eq} (h)*	Tracts of land where quiet is an essential element in their intended purpose. This category includes lands set aside for serenity and quiet, and such land uses as outdoor amphitheaters and concert pavilions, as well as national historic landmarks with significant outdoor use. Also included are recording studios and concert halls.
2	Outdoor L _{dn}	Residences and buildings where people normally sleep. This category includes homes, hospitals, and hotels where a nighttime sensitivity to noise is assumed to be of utmost importance.
3	Outdoor Leq(h)*	Institutional land uses with primarily daytime and evening use. This category includes schools, libraries, theaters, and churches, where it is important to avoid interference with such activities as speech, meditation, and concentration on reading material. Places for meditation or study associated with cemeteries, monuments, and museums can also be considered to be in this category. Certain historical sites, parks, campgrounds, and recreational facilities are also included.

NOTE:

* L_{eq} for the noisiest hour of transit-related activity during hours of noise sensitivity.

Federal Railroad Administration. September 2012. *High-Speed Ground Transportation Noise and Vibration Impact Assessment*. Final Report. Table 3-2. Washington, DC.

State

California Government Code Section 65302

Section 65302 of California Government Code provides a framework for general plans and their content. It requires that the noise element include implementation measures and possible solutions that address existing and foreseeable noise problems, if any. The adopted noise element shall serve as a guideline for compliance with the state's noise insulation standards. The noise element shall also identify and appraise noise problems in the community, analyze and quantify current and projected noise levels for (a) highways and freeways; (b) primary arterials and major local streets; (c) passenger and freight online railroad operations and ground rapid transit systems; (d) commercial, general aviation, heliport, helistop, and military airport operations, aircraft overflights, jet engine test stands, and all other ground facilities and maintenance functions related to airport operation; (e) local industrial plants, including, but not limited to, railroad classification yards; and (f) other ground stationary noise sources, including, but not limited to, military installations, identified by local agencies as contributing to the community noise environment.

Section 65302 also specifies that noise contours be shown for all of the above listed sources and be stated in terms of community noise equivalent level (CNEL) or day-night average level (L_{dn}). The noise contours shall be prepared on the basis of noise monitoring or following generally accepted noise modeling techniques for the various sources identified above. The noise contours shall be used as a guide for establishing a pattern of land uses in the land use element that minimizes the exposure of community residents to excessive noise.

California Noise Control Act of 1973

The California Noise Control Act (California Health and Safety Code, Division 28, § 46000 et seq), as found in the California Health and Safety Code, Division 28, § 46000 et seq., declares that excessive noise is a serious hazard to public health and welfare, and establishes the Office of Noise Control with responsibility to set standards for noise exposure in cooperation with local governments or the state legislature.

Airport Noise Standards (Title 21, CCR Section 5000 et seq.)

The State of California has the authority to establish regulations requiring airports to address aircraft noise impacts on land uses in their vicinities. The State of California's Airport Noise Standards, found in Title 21 of the California Code of Regulations, identify a noise exposure level of CNEL 65 dB as the noise impact boundary around airports. Within the noise impact boundary, airport proprietors are required to ensure that all land uses are compatible with the aircraft noise environment or the airport proprietor must secure a variance from the California Department of Transportation (Caltrans).

Noise Insulation Standards

The California Noise Insulation Standards found in Title 24 of the California Code of Regulations, California Health and Safety Code § 17922.6, set requirements for new multi-family residential units, hotels, and motels that may be subject to relatively high levels of transportation-related noise. For

exterior noise, the noise insulation standard is DNL 45 dB in any habitable room and requires an acoustical analysis demonstrating how dwelling units have been designed to meet this interior standard where such units are proposed in areas subject to noise levels greater than DNL 60 dB.

California Streets and Highways Code

The State of California establishes noise limits for vehicles licensed to operate on public roads. For heavy trucks, the state pass-by standard is consistent with the federal limit of 80 dB. The state pass-by standard for light trucks and passenger cars (less than 4.5 tons gross vehicle rating) is also 80 dB at 15 meters from the centerline. For new roadway projects, Caltrans employs the NAC, promulgated by Title 40 of the Code of Federal Regulations (CFR), as administered by the FHWA.

Section 216

Section 216 of the California Streets and Highways Code relates to the noise effects of a proposed freeway project on public and private elementary and secondary schools. Under this code, a noise impact occurs if, as a result of a proposed freeway project, noise levels exceed 52 dBA L_{eq} in the interior of public or private elementary or secondary classrooms, libraries, multipurpose rooms, or spaces. If a project results in a noise impact under this code, noise abatement must be provided to reduce classroom noise to a level that is at or below 52 dBA L_{eq} . If the noise levels generated from freeway and non-freeway sources exceed 52 dBA L_{eq} prior to the construction of the proposed freeway project, then noise abatement must be provided to reduce the noise to the level that existed prior to construction of the project.

California Department of Health Services Land Use Guidelines for Community Noise Exposure

The state has published guidance for locating land uses in areas compatible with the existing noise environment (Table 3.13.1-3, *Land Use Guidelines*).¹³ For example, it would normally be acceptable for a single-family residence to be located in an area with an existing noise level of 60 dBA CNEL or less.

¹³ Governor's Office of Planning and Research. 2003. *State of California General Plan Guidelines*. Sacramento, CA.

**TABLE 3.13.1-3
LAND USE GUIDELINES**

Land Use Category	Community Noise Exposure (L _{dn} or CNEL, dB)					
	55	60	65	70	75	80
Residential - Low Density Single-Family, Duplex, Mobile Homes	Green	Green	Green	Yellow	Yellow	Yellow
Residential - Multi-Family	Green	Green	Green	Yellow	Yellow	Yellow
Transient Lodging - Motels Hotels	Green	Green	Green	Yellow	Yellow	Yellow
Schools, Libraries, Churches, Hospitals, Nursing Homes	Green	Green	Green	Yellow	Yellow	Yellow
Auditoriums, Concert Halls, Amphitheatres	Green	Green	Green	Yellow	Yellow	Yellow
Sports Arena, Outdoor Spectator Sports	Green	Green	Green	Yellow	Yellow	Yellow
Playgrounds, Neighborhood Parks	Green	Green	Green	Yellow	Yellow	Yellow
Golf Courses, Riding Stables, Water Recreation, Cemeteries	Green	Green	Green	Yellow	Yellow	Yellow
Office Buildings, Business Commercial and Professional	Green	Green	Green	Yellow	Yellow	Yellow
Industrial, Manufacturing, Utilities, Agriculture	Green	Green	Green	Yellow	Yellow	Yellow
 Normally Acceptable - Specified land use is satisfactory, based upon the assumption that any buildings involved are of normal conventional construction, without any special noise insulation requirements.						
 Conditionally Acceptable - New construction or development should be undertaken only after a detailed analysis of the noise reduction requirements is made and needed noise insulation features included in the design. Conventional construction, but with closed windows and fresh air supply system or air conditioning will normally suffice.						
 Normally Unacceptable - New construction or development should generally be discouraged. If new construction or development does proceed, a detailed analysis of the noise reduction requirements must be made and needed noise insulation features included in the design.						
 Clearly Unacceptable - New construction or development should generally not be undertaken.

Caltrans Guidance

Traffic Noise. Chapter 30 of the Caltrans *Project Development Procedures Manual*¹⁴ offers guidance on highway traffic noise abatement criteria (NAC), corresponding to various land use activity categories. However, the NAC in Chapter 30 has been superseded by the Caltrans *Traffic Noise Analysis Protocol for New Highway Construction, Reconstruction, and Retrofit Barrier Projects* (Table 3.13.1-4, Activity

¹⁴ California Department of Transportation. 18 June 2009. *Project Development Procedures Manual*. Chapter 30.

Categories and Noise Abatement Criteria).¹⁵ Activity categories and related traffic noise impacts are determined based on the actual land use in a given area. The Caltrans *Technical Noise Supplement to the Traffic Noise Analysis Protocol*¹⁶ provides additional details on noise analysis procedures, practices, and other useful technical background information related to the analysis and reporting of highway and construction noise impacts and abatement. It supplements and expands on concepts and procedures referred to in the *Traffic Noise Analysis Protocol for New Highway Construction, Reconstruction, and Retrofit Barrier Projects*.

**TABLE 3.13.1-4
ACTIVITY CATEGORIES AND NOISE ABATEMENT CRITERIA**

Activity	L _{eq} (h)*	Evaluation Location	Description of Activities
A	57	Exterior	Lands on which serenity and quiet are of extraordinary significance and serve an important public need and where the preservation of those qualities is essential if the area is to continue to serve its intended purpose.
B**	67	Exterior	Residential.
C**	67	Exterior	Active sport areas, amphitheatres, auditoriums, campgrounds, cemeteries, day care centers, hospitals, libraries, medical facilities, parks, picnic areas, places of worship, playgrounds, public meeting rooms, public or nonprofit institutional structures, radio studios, recording studios, recreation areas, Section 4(f) sites, schools, television studios, trails, and trail crossings.
D	52	Interior	Auditoriums, day care centers, hospitals, libraries, medical facilities, places of worship, public meeting rooms, public or nonprofit institutional structures, radio studios, recording studios, schools, and television studios.
E	72	Exterior	Hotels, motels, offices, restaurants/bars, and other developed lands, properties, or activities not included in A–D or F.
F			Agriculture, airports, bus yards, emergency services, industrial, logging, maintenance facilities, manufacturing, mining, rail yards, retail facilities, shipyards, utilities (water resources, water treatment, electrical), and warehousing.
G			Undeveloped lands that are not permitted.

NOTES:

* The L_{eq}(h) activity criteria values are for impact determination only and are not design standards for noise abatement measures. All values are A-weighted decibels (dBA).

** Includes undeveloped lands permitted for this activity category.

Airport Noise. The Caltrans Division of Aeronautics *California Airport Land Use Planning Handbook*¹⁸ offers guidance on airport planning and developing compatible land use policies. It also provides suggested criteria for the CNEL values commonly used as the limit for acceptable residential noise exposure (Table 3.13.1-5, *Noise Compatibility Criteria*).

**TABLE 3.13.1-5
NOISE COMPATIBILITY CRITERIA**

CNEL (dB)	Criteria	Suggested Applicability
65	Set by the FAA and other federal agencies as the level above which residential land uses may be incompatible if not acoustically treated. Established by California state regulations as the maximum normally acceptable noise level for residential and certain other land uses at county-designated noise-problem airports.	Generally not appropriate for most new development. May be acceptable in noisy urban locations and/or in hot climates where most buildings are air conditioned.
60	The contour within which California Building Code (Section 1207.11) requires an acoustical analysis of proposed residential structures, other than detached single-family dwellings. Suggested by the California Governor’s Office of Planning and Research General Plan Guidelines as the maximum “normally acceptable” noise exposure for residential areas. [Note: Individual noise events will occasionally cause significant interference with residential land use activities, particularly outdoor activities, in quiet suburban/rural communities.]	Suitable for new development around most airports. Particularly appropriate in mild climates where windows are often open.
55	Identified by the EPA as the level below which “undue interference with activity and annoyance” will not occur. [Note: Individual noise events will seldom significantly interfere with residential land use activities (e.g., interference with speech). In urban areas, aircraft contribution to this noise level may be less than that of other noise sources.]	Suitable for airports in quiet, rural locations.

NOTE:

When setting criteria for a specific airport, other characteristics of the airport and its environs also need to be considered.

SOURCE:

California Department of Transportation. October 2011. *California Airport Land Use Planning Handbook*. Table 4B. Sacramento, CA.

Construction Noise. Section 14-8.02, Noise Control, of Caltrans standard specifications provides guidance on preventing construction noise impacts. The specification states:

- Do not exceed 86 dBA at 50 feet from the job site activities from 9 p.m. to 6 a.m.
- Equip an internal combustion engine with the manufacturer recommended muffler. Do not operate an internal combustion engine on the job site without the appropriate muffler.

¹⁸ California Department of Transportation. October 2011. *California Airport Land Use Planning Handbook*. Sacramento, CA.

If adverse construction noise impacts are anticipated, project plans and specifications must identify abatement measures that would minimize or eliminate adverse construction noise impacts on the community.

Construction Vibration. The *Transportation and Construction Vibration Guidance Manual* presents a variety of criteria for vibration impacts based on previously completed studies.¹⁹ Caltrans recommends that extreme care be taken when sustained pile driving occurs within 7.5 meters (25 feet) of any building and 15 to 30 meters (50 to 100 feet) of a historic building or a building in poor condition.

Local

To identify, appraise, and remedy noise problems in local communities, each county and city in the SCAG region is required to adopt a noise element as part of its General Plan. Each noise element is required to analyze and quantify current and projected noise levels associated with local noise sources, including, but not limited to, highways and freeways, primary arterials and major local streets, rail operations, air traffic associated with the airports, local industrial plants, and other ground stationary sources that contribute to the community noise environment. Beyond statutory requirements, local jurisdictions are free to adopt their own goals and policies in their noise elements, although most jurisdictions have chosen to adopt noise/land use compatibility guidelines that are similar to those recommended by the state. The overlapping DNL ranges indicate that local conditions (existing noise levels and community attitudes toward dominant noise sources) should be considered in evaluating land use compatibility at specific locations.

In addition to regulating noise through noise element policies, local jurisdictions regulate noise through enforcement of local ordinance standards. These standards generally relate to noisy activities (e.g., use of loudspeakers and construction) and stationary noise sources and facilities (e.g., air conditioning units and industrial activities). Three cities in the SCAG region, Los Angeles, Long Beach, and Port Hueneme, operate port facilities. Noise from the Ports of Los Angeles, Long Beach, and Hueneme are regulated by the noise ordinances and noise elements of the Los Angeles, Long Beach, and Port Hueneme General Plans.

In terms of airport noise, some of the actions that airport proprietors have been allowed to take to address local community noise concerns include runway use and flight routing changes, aircraft operational procedure changes, and engine run-up restrictions. These actions generally are subject to approval by the FAA, which has the authority and responsibility to control aircraft noise sources, implement and enforce flight operational procedures, and manage the air traffic control system. Airport proprietors may also consider limitations on airport use, but such restrictions can be overridden by the Federal Aviation Administration if it is determined that they unjustly discriminate against any user, impede the federal interest in safety and management of the air navigation system, or unreasonably interfere with interstate commerce.

Some local jurisdictions regulate vibration through enforcement of local ordinance standards. These standards generally relate to preventing perceptible vibration from being generated past the property line of the source location.

3.13.2 EXISTING CONDITIONS

Ambient Noise Levels

The 38,000-square-mile SCAG region includes 6 counties and 191 cities. It covers a diverse array of land uses that range from quiet, undeveloped rural areas to loud, dense, urban areas. Ambient noise levels for areas where sensitive receptors may be located can range from 46 dBA for a small town or quiet suburban area to greater than 87 dBA for an urban area next to a freeway.²⁰ Given the size of the SCAG region and the variation in sources, it is not useful to complete a detailed noise monitoring study for this PEIR. Rather, this PEIR presents a discussion of noise levels associated with different noise sources, thereby allowing the reader to infer the noise level at different locations depending on the proximity of a location to a noise source. Since the range of ambient noise levels is so vast, a variety of land uses and locations was sampled in order to characterize their ambient noise levels. Six locations were selected within the SCAG region to represent the range of ambient noise conditions by land use types (Table 3.13.2-1, *Ambient Noise Sampling Data*).

**TABLE 3.13.2-1
AMBIENT NOISE SAMPLING DATA**

Location	Land Use	Peak Hour Noise Level (dBA, L _{eq})
City of Los Angeles	Recreation (Elysian Reservoir)	42
City of Los Angeles	Residential Area	51
City of Los Angeles	Industrial Area (Port)	67
City of Redlands	Freeway	65
City of Santa Monica	Residential Area	50
City of West Covina	Commercial Area	60

SOURCE:

Southern California Association of Governments. March 2012. *Program Environmental Impact for the 2012–2035 RTP/SCS*.

The most common noise sources within the SCAG region are motor vehicles traveling on highways and on arterial roadways. Higher levels of noise from motor vehicles are generally due to higher traffic volumes and faster travel speeds. Aircraft noise is also present in many areas of the SCAG region, with higher noise levels generated during takeoff and landing. Rail traffic and industrial and commercial activities also contribute to the noise level. Other contributors may also include construction, garbage collecting trucks, and sporting/special events.

Transportation

Many principal noise generators within the SCAG region are associated with transportation (i.e., airports, freeways, arterial roadways, seaports, and railroads). However, local collector streets are not considered to be a significant source of noise since traffic volumes and travel speeds are generally much lower than for freeways and arterial roadways.

Prepared by the U.S. Environmental Protection Agency Office of Noise Abatement and Control. Available at: http://www.fican.org/pdf/EPA_Noise_Levels_Safety_1974.pdf

Airports

The SCAG region contains 57 airports, with 12 major commercial airports serving the region²¹ (Table 3.13.2-2, *Major Commercial Airports within the SCAG Region*).

**TABLE 3.13.2-2
MAJOR COMMERCIAL AIRPORTS WITHIN THE SCAG REGION**

Southern California Association of Governments. December 2011. *2012–2035 Regional Transportation Plan / Sustainable Communities Strategy: Aviation and Airport Ground Access*. Los Angeles, CA.

Southern California Association of Governments. 7 January 2008. SCAG Commercial Airport System Map. Available at: <http://www.scag.ca.gov/programs/Pages/ASA.aspx>

Airport noise is generated primarily by aircraft takeoffs and landings, which will vary depending on the aircraft's weight and the number, type, and location of the engines. Typically, most major public airports will have an airport land use plan that provides guidance on noise levels and land use in adjacent areas. The FAA measures airport-related noise in communities in terms of overall exposure rather than single events such as takeoffs and landings since overall exposure would account for the overall number of noise events and the time when these events occur. The day night average sound level (L_{dn}) is the standard federal (FAA and EPA) metric for this measurement; however, the FAA also accepts the CNEL when a state requires that metric to assess noise effects. The State of California Department of Transportation Division of Aeronautics adopted the CNEL as their methodology for describing airport noise exposure. Noise levels computed by these two methods typically differ by less

²¹ Southern California Association of Governments. 7 January 2008. *SCAG Commercial Airport System Map*. Available at: <http://www.scag.ca.gov/programs/Pages/ASA.aspx>

than 1 dBA. The resulting noise contour map identifies geographic areas that are exposed to various levels of impacts from airport noise. Areas that are within the noise contours of 65 dBA CNEL and above, associated with airport activities, are considered to be incompatible with certain land uses,²² including residences, schools, hospitals, and childcare facilities.

Freeways, Highways, and Arterial Roadways

The SCAG region has nearly 21,000 centerline (route) miles and more than 65,000 lane-miles of roadways.²³ Regionally significant arterials provide access to the freeway system and often serve as parallel alternate routes; in some cases, they are the only major system of transportation available to travelers. Typical arterial roadways have one or two lanes of traffic in each direction, with some containing as many as four lanes in each direction. Traffic noise is generated primarily from vehicles and dominated by trucks. In general, higher traffic volumes, higher speeds, and greater numbers of trucks will increase the noise level. Vehicle noise comes from noises generated by the engine, exhaust, and tires, and is often exacerbated by vehicles in a state of disrepair, such as defective mufflers or struts.

There are also environmental factors that affect noise from highway and roads. The level of traffic noise can be reduced by distance, terrain, vegetation, and intervening obstructions. However, unlike construction noise, traffic noise is a line source, not a point source. Therefore, the attenuation with distance is not as great as for traffic noise. In comparison, a point source such as stationary construction equipment attenuates by 6 dB with every doubling of the distance, whereas a line source such as traffic attenuates only by 3 dB with every doubling of the distance.

Traffic noise can therefore be a significant environmental concern where buffers (e.g., buildings, landscaping, etc.) are inadequate or where the distance to sensitive receptors is relatively short. Given typical daily traffic volumes of 10,000 to 40,000 vehicle trips, noise levels along arterial roadways typically range from L_{dn} 65 to 70 dB at a distance of 50 feet from the roadway centerlines.

In addition to distance, the line of sight also affects the extent to which traffic noise can affect sensitive receptors. Line of sight can be interrupted by roadways that are elevated above grade or depressed below grade; by intervening structures such as buildings, landscaping, and sound walls; or by terrain such as hills. For example, measurements show that depressing a freeway by approximately 12 feet yields a reduction in traffic noise relative to an at-grade freeway of 7 to 10 dB at all distances from the freeway due to the interrupted line of sight. Traffic noise from an elevated freeway is typically 2 to 10 dB less than the noise from an equivalent at-grade facility within 300 feet of the freeway, but beyond 300 feet, the noise radiated by an elevated and at-grade freeway (assuming equal traffic volumes, fleet mix, and vehicle speed) is the same because at short distances, the elevated structure of the freeway itself interrupts the line of sight between the traffic and the sensitive receptor, but that line of sight is reestablished at greater distances. Caltrans also has an extensive sound wall program for areas with residential property built prior to the freeway or prior to a major widening and has hourly noise levels that exceed the 67-dB (L_{eq}) threshold, and where the wall would be able to achieve at least a 5-dB

²² Federal Aviation Administration. October 2007. *Environmental Desk Reference for Airport Actions*. Chapter 17, Noise. Washington, DC.

²³ Southern California Association of Governments. April 2012. *2012–2035 Regional Transportation Plan*. Los Angeles, CA.

reduction and the cost would not exceed \$35,000 per residential unit (1987 dollars).²⁴ A typical wall that interrupts the line of sight is capable of reducing noise levels by 10 dB.

Railroad Operations

Railroad operations generate high, relatively brief, intermittent noise events. These noise events are an environmental concern for sensitive receptors located along rail lines and in the vicinities of switching yards. Locomotive engines; the interaction of steel wheels and rails from rolling noise, impact noise when a wheel encounters a rail joint, turnout, or crossover, and squeal generated by friction on tight curves; and warning devices such as air horns and crossing bell gates are the primary sources of rail noise. Noise levels vary widely for different types of rail operations (Table 3.13.2-3, *Reference Noise Levels for Various Rail Operations*).

**TABLE 3.13.2-3
REFERENCE NOISE LEVELS FOR VARIOUS RAIL OPERATIONS**

Source/Type		Reference Condition	Reference Noise Level (SEL, dBA)
Commuter rail, at-grade	Locomotives	Diesel-electric, 3,000 horsepower	92
		Electric	90
	Diesel multiple unit	Diesel-powered, 1,200 horsepower	85
	Horns	Within one-quarter mile of grade crossing	110
	Cars	Ballast, welded rail	82
Rail transit		At-grade, ballast, welded rail	82
Transit whistles/warning devices		Within one-eighth mile of grade crossing	93
Automated guideway transit	Steel wheel	Aerial, concrete, welded rail	80
	Rubber tire	Aerial, concrete, guideway	78
Monorail		Aerial, straddle beam	82
Maglev		Aerial, open guideway	72

SOURCE:

Federal Transit Administration. May 2006. *Transit Noise and Vibration Impact Assessment*. Washington, DC.

Freight Trains

Locomotive engine noise and wheel-to-rail interactions are the primary source of noise generated by freight train pass-by events. Engine noise increases when the train is being pulled uphill. Wheel noise increases approximately 6 dB for each doubling of train velocity. A rail line supporting 40 freight trains per day generates approximately L_{dn} 75 dB at 200 feet from the tracks. Freight trains also generate substantial amounts of ground-borne noise and vibration in the vicinity of the tracks. Ground-borne noise and vibration is a function of both the quality of the track and the operating speed of the train.

²⁴ California Department of Transportation. Updated 13 October 2010. Soundwalls. Website. Available at: <http://www.dot.ca.gov/dist07/resources/soundwalls/>

The SCAG region is served by two Class I railroads: Union Pacific Railroad (UP) and Burlington Northern/Santa Fe Railway (BNSF).²⁵ BNSF rail lines extend south from switching yards in eastern Los Angeles to the Los Angeles and Long Beach ports complex and east to Arizona and points beyond via San Bernardino County. In 2010, UP and BNSF handled more than 4 million international and domestic containers and truck trailers. The SCAG Inland Empire Railroad Main Line Study suggest that the number of freight trains on most BNSF and UP lines will more than double between 2000 and 2025 in response to a tripling of container volume at the San Pedro Bay Ports. In addition, there are three Class III railroads (short lines) serving the region, the Pacific Harbor Line (which handles all rail coordination in the Ports of Los Angeles and Long Beach), the Los Angeles Junction Railway (which provides switching service in the Vernon area for the two main line railroads), and the Ventura County Railroad (which serves the Port of Hueneme).

Completed in 2002, the Alameda Corridor provides a substantial long-term reduction in noise and vibration associated with rail operations in the vicinities of the Ports of Long Beach and Los Angeles by eliminating 209 grade-level street/rail crossings. The Alameda Corridor consolidates the operations of UP and BNSF on 90 miles of existing branch line tracks into one 20-mile corridor along Alameda Street. This corridor provides a direct connection between the ports of Long Beach and Los Angeles and the UP and BSNF switching yards in eastern Los Angeles. The project includes four overpasses and three underpasses at intersections south of SR-91 that allow vehicles to pass above the trains. North of SR-91, trains pass through a 10-mile, 33-foot-deep trench. The construction of tracks in a below-grade trench, track construction on new base materials, and the use of continuous welded track reduce noise impacts on adjacent uses from trains associated with the ports. The project also includes sound walls in certain locations to mitigate vehicle noise along Alameda Street in residential neighborhoods and other sensitive areas.

Commuter Rail

In general, the noise generated by commuter rail facilities (powered by either diesel or electric locomotives) is from the locomotives themselves. In the SCAG region, there are two commuter and intercity passenger train operators: Amtrak and the Southern California Regional Rail Authority (SCRRA).

Amtrak operates five routes that travel through the SCAG region: Texas Eagle, Coast Starlight, Pacific Surfliner, Southwest Chief, and Sunset Limited. These routes serve Chicago, St. Louis, Dallas, San Antonio, Los Angeles, Portland, Seattle, San Luis Obispo, Santa Barbara, San Diego, Albuquerque, and New Orleans.²⁶ A typical Amtrak pass-by event generates SEL 107 dB at 50 feet; two such events during the daytime or evening periods generate approximately L_{dn} 61 dB at 50 feet and approximately L_{dn} 52 dB at 200 feet. Nine such events generate approximately L_{dn} 67 dB at 50 feet and 58 L_{dn} dB at 200 feet.

The SCRRA operates the Metrolink commuter rail system. This system currently includes 57 stations and 7 rail lines: Antelope Valley, Inland Empire–Orange County, Orange County, Riverside, San Bernardino, Ventura, and 91.²⁷ Noise levels generated by Metrolink are similar to those associated with Amtrak.

²⁷ Metrolink. Accessed 25 August 2015. *Stations*. Available at: <http://www.metrolinktrains.com/stations/>

Urban Rail Transit

This category includes both heavy and light rail transit. Heavy rail is generally defined as electrified rapid transit trains with dedicated guideways, and light rail as electrified transit trains that do not require dedicated guideways. In general, noise increases with speed and train length. Sensitivity to rail noise generally arises when there is less than 50 feet between the rail and sensitive receptors. Individual urban rail transit pass-by events generate substantially less noise than commuter rail events, but the aggregate noise impact for sensitive uses along the line can be similar or greater due to the much higher frequency of pass-by events. Complaints about ground-borne vibration from surface track are more common than complaints about ground-borne noise. A significant percentage of complaints about noise can be attributed to the proximity of switches, rough or corrugated track, or wheel flats.

In the SCAG region, the Los Angeles County Metropolitan Transportation Authority (Metro) provides urban rail transit for their 1,447-square-mile service area. Metro operates 86.1 miles of rail service on two subway lines (Purple and Red) and four light rail lines (Blue, Expo, Gold, and Green). The Purple Line extends from downtown Los Angeles west to the Koreatown neighborhood with 8 existing stations. The Red Line extends from downtown Los Angeles west to the Koreatown neighborhood and then north to North Hollywood with 14 existing stations. The Blue Line extends from Long Beach to downtown Los Angeles with 22 existing stations. The Expo Line extends from downtown Los Angeles to Culver City with 12 existing stations. The Gold Line extends from East Los Angeles to Pasadena with 21 existing stations. The Green Line extends from Norwalk west to El Segundo and south to Redondo Beach with 14 existing stations. In addition, Metro has two (Orange and Silver) bus rapid transit ways (BRTs). The Orange Line extends from North Hollywood, travels west to Woodland Hills, and then north to Chatsworth, with 18 existing stations. The Silver Line extends from El Monte west to downtown Los Angeles and then south to Gardena with 10 existing stations.

Port Operations

The three major ports in the SCAG region, Port of Los Angeles, Port of Long Beach, and Port of Hueneme in Ventura County, provide a major link between the United States and the Pacific Rim countries. At the ports, noise is generated from three sources: ships using the port facilities, equipment associated with cargo activity within the port, and truck and rail traffic that move cargo to and from the ports. All sources affect the ambient noise levels in the port areas. Residential areas in San Pedro and West Long Beach are affected most by truck and rail traffic related to the ports.

Since 2000, the Port of Los Angeles has handled more container volume of cargo than any other port in the United States. In fiscal year 2014, the Port of Los Angeles handled 176.4 million metric revenue tons (MMRT) of cargo,²⁸ Port of Long Beach handled 165.5 MMRT,²⁹ and Port of Hueneme handled 1.4 MMRT.³⁰ When combined together, the Port of Los Angeles and the Port of Long Beach rank ninth in the world for container volume. The Ports of Los Angeles, Long Beach, and Hueneme are major regional economic development centers. The San Pedro Bay Ports, which include the Los Angeles and Long Beach Ports, currently handle almost 40 percent of the cargo volume in the country; the Port of Hueneme in Ventura County is a major shipping point for automobiles, fresh fruit, and produce.

Industrial and Manufacturing Noise

Noise from industrial complexes and manufacturing plants are characterized as stationary point sources of noise even though they may include mobile sources such as forklifts. Local governments typically regulate noise from industrial and manufacturing equipment and activities through enforcement of noise ordinance standards and implementation of general plan policies. Industrial complexes and manufacturing plants are generally located away from sensitive land uses, and, as such, noise generated from these sources generally have less effect on the local community.

Construction Noise

Noise from construction sites are characterized as stationary point sources of even though they may include mobile sources, such as graders. Local governments typically regulate noise from construction equipment and activities through enforcement of noise ordinance standards and imposition of conditions of approval for building or grading permits.

Construction noise related to transportation projects is typically addressed in each project's noise analysis report and related environmental document. Most projects will not require modeling or any form of analysis associated with construction-related noise. Some projects may require basic noise calculations. For projects that require compliance with local ordinances, more detailed analysis techniques may be required.

Construction-related noise levels generally fluctuate depending on the construction phase, equipment type and duration of use, distance between noise source and receptor, and line of sight between the noise source and the receptor (temporary barriers can block the line of sight to reduce noise levels). The Federal Transit Administration has established typical noise levels associated with various types of construction-related machinery (*Table 3.13.2-4, Construction Equipment Noise Levels*). In contrast to industrial and manufacturing plants, construction sites are located throughout the region and are often located within, or adjacent to, residential districts and other sensitive receptors. In general, construction activities generate high noise levels intermittently on and adjacent to the construction sites, and the related noise impacts are short-term in nature. The dominant source of noise from most construction equipment is the engine, usually a diesel engine, with inadequate muffling. In a few cases, however, such as impact pile driving or pavement breaking, noise generated by the process dominates. Construction equipment can be considered to operate in two modes, stationary and mobile. Stationary equipment operates in one location for one or more days at a time, with either a fixed-power operation (pumps, generators, compressors) or a variable noise operation (pile drivers, pavement breakers). Mobile equipment moves around the construction site with power applied in cyclic fashion (bulldozers, loaders), or movement to and from the site (trucks). The noise levels of these point sources decrease by approximately 6 dB with each doubling of distance from the noise source (e.g., noise levels from excavation might be approximately 83 dB at 100 feet from the site, and about 77 dB at 200 feet from the site). Interior noise levels from construction are approximately 10 dB (open windows) to 20 dB (closed windows) less than exterior noise levels due to the attenuation provided by building walls.

Sensitive Receptors

Some land uses are considered more sensitive to ambient noise levels than others due to noise exposure (in terms of both exposure time and “insulation” from noise) and the types of activities typically involved. Residences, motels, and hotels; schools; libraries; churches; hospitals; nursing homes and senior centers; and natural areas, parks, and outdoor recreation areas are generally more sensitive to noise than are commercial and industrial land uses. The 38,000-square-mile SCAG region contains a large number of these sensitive land uses (Table 3.13.2-5, *Existing Noise Sensitive Land Uses*).

**TABLE 3.13.2-5
EXISTING NOISE SENSITIVE LAND USES**

Land Use	Acceptable Upper Noise Limit (CNEL, dB)	Number of Locations within SCAG Region
Residential	60 for single-family residential; 65 for multi-family residential and transient lodging	3,762,256
Schools	70	9,865
Libraries	70	520
Churches	70	8,118
Hospitals and Nursing Homes	70	2,590
Natural Areas, Parks, and Playgrounds	70	2,805

SOURCE:

SCAG data, 2015.

Sensitive land uses within the SCAG region were determined using two sources of data from SCAG. The first source of data was TomTom GIS points of particular feature types that fell into a sensitive land use category. The TomTom GIS points were reviewed for accuracy, and duplicate points and points that were not sensitive locations/land uses were removed to the greatest extent practicable. The second source of data was existing land use parcel data in the SCAG region. Because the TomTom data lacked residential locations, the existing land use parcel data where the land use was categorized as residential (i.e., single family residential, multi-family residential, mobile homes and trailer parks, mixed residential, or rural residential) was used to locate sensitive land uses within the SCAG region.

The noise standards for sensitive land uses are more stringent than those for less sensitive uses, such as commercial and industrial. To protect various human activities and sensitive land uses (e.g., residences, schools, and hospitals) lower noise levels are needed. A noise level of L_{dn} 55 to 60 dB outdoors is the upper limit for intelligible speech communication inside a typical home. In addition, social surveys and case studies have shown that complaints and community annoyance in residential areas begin to occur at L_{dn} 55 dB. Sporadic complaints associated with the L_{dn} 55 to 60 dB range give way to widespread complaints and individual threats of legal action within the L_{dn} 60 to 70 dB range. At L_{dn} 70 dB and above, residential community reaction typically involves threats of legal action and strong appeals to local officials to stop the noise.

Sensitive receptors for vibration are the same as for noise, with one exception. Historic structures are potentially sensitive to excessive vibration because ground vibration will excite building structures, and if the vibration levels are high, there is a potential for structural damage. The Caltrans *Transportation and Construction Vibration Manual* references the National Cooperative Highway Research Program report published in September 2012 for a summary of construction effects on historic buildings. Using the most conservative values in that report, historic buildings may be damaged when a single vibration event exceeds 0.20 ppv or frequent vibration events exceed 0.13 ppv, whereas extremely fragile historic buildings may be damaged when a single vibration event exceeds 0.12 ppv or frequent vibration events exceed 0.08 ppv.³¹

³¹ National Cooperative Highway Research Program. September 2012. *Current Practices to Address Construction Vibration and Potential Effects to Historic Buildings Adjacent to Transportation Projects*. Table 1. Washington, DC.

3.13.3 THRESHOLDS OF SIGNIFICANCE

The potential for the 2016 RTP/SCS to result in impacts related to noise was analyzed in relation to the six questions contained in Appendix G of the State CEQA Guidelines. The Plan would result in a significant impact related to noise if it would result in:

- Exposure of persons to or generation of noise levels in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies.
- Exposure of persons to or generation of excessive groundborne vibration or groundborne noise levels.
- A substantial permanent increase in ambient noise levels in the project vicinity above levels existing without the project.
- A substantial temporary or periodic increase in ambient noise levels in the project vicinity above levels existing without the project.
- For a project located within an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project expose people residing or working in the project area to excessive noise levels.
- For a project within the vicinity of a private airstrip, would the project expose people residing or working in the project area to excessive noise levels.

Implementation of the 2016 RTP/SCS would result in temporary increases in noise levels during the construction of transportation projects and permanent increases in noise levels in areas where the traffic capacity has been increased. The analysis of these impacts is programmatic at the regional level. Project-specific impacts vary and appropriate mitigation measures would need to be developed on a project-by-project basis, as appropriate.

Methodology

This section summarizes the methodology used to evaluate the potential anticipated impacts from noise and vibration as a result of implementing the transportation projects and anticipated pattern of land use considered in the 2016 RTP/SCS.

Permanent increases in operational noise associated with highway traffic is dependent on a number of variables:

- Traffic volume (the greater the number of vehicles passing through an area within a specified period results in greater noise)
- Vehicle speed (greater speed results in greater noise from tire noise and aerodynamic noise)
- Vehicle types such as cars, trucks, and motorcycles (different engine and exhaust combinations, different tires, and different aerodynamic profiles result in different noise levels)
- Location of the roadway with respect to sensitive receptors (distance and intervening objects or topography will reduce noise levels)

3.13.4 IMPACT ANALYSIS

The analysis of significant impacts from noise and vibration resulting from the 2016 RTP/SCS was based on the provided list of transportation projects located throughout the six counties and 38,000 square miles of the SCAG region. Project types range from projects with substantial ground disturbance such as rail projects, mixed flow lane projects, and grade separation projects, to operations and maintenance projects with minimal ground disturbance such as traffic signal synchronization or lane-restripping projects. Locations of major projects were analyzed in conjunction with sensitive land uses within 500 feet (Table 3.13.4-1, *Noise Sensitive Land Uses within 500 Feet of Major Transportation Projects*).

**TABLE 3.13.4-1
NOISE SENSITIVE LAND USES WITHIN 500 FEET OF MAJOR TRANSPORTATION PROJECTS**

Land Use	Acceptable Upper Noise Limit (CNEL, dB)	Number of Locations within SCAG Region
Residential	60 for single-family residential; 65 for multi-family residential and transient lodging	152,671
Schools	70	857
Libraries	70	61
Churches	70	912
Hospitals and Nursing Homes	70	368
Natural Areas, Parks, and Playgrounds	70	129

SOURCE:

SCAG GIS analysis and data, 2015.

Sensitive land uses within 500 feet of major projects were determined by using a combination of the TomTom GIS points and the existing land use data from SCAG. A 500-foot buffer was placed on the major SCAG future projects (mixed flow lane, toll lane, HOT lane, HOV lane, freight corridor, bus rapid transit, and rail line) GIS line files to obtain an impact buffer for the analysis. The number of TomTom point data and existing land use residential parcels that fell within the impact buffer per sensitive land use category are included in Table 3.13.4-1.

IMPACT NOISE-1. Result in exposure of persons to or generation of noise levels in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies.

Significant Impact

Implementation of transportation projects and land use strategies in the 2016 RTP/SCS would result in exposure of persons to or generation of noise levels in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies, constituting a significant impact. Grading and construction activities would generate temporary increases in noise levels, and operational activities would generate permanent increases in noise levels in excess of standards established in the local general plan or noise ordinance, constituting a potentially significant impact, requiring the consideration of mitigation measures.

Construction. There are 154,998 existing sensitive land uses within 500 feet of major transportation projects (Table 3.13.4-1). Impacts to sensitive receptors resulting from the construction of these major transportation improvement projects would depend on several factors, such as the type of project, adjacent land use, and duration and intensity of the construction activities. Construction noise levels would fluctuate depending on how the construction is phased, the equipment mix, the distance between the construction and the nearest sensitive receptor, and the presence of intervening objects. Furthermore, anticipated development to accommodate the policy forecast population, household, and employment would take a variety of forms, with a substantial fraction focused in and around high quality transit areas (HQTAs), existing urbanized areas, and opportunity areas. Because development would be focused in HQTAs and urbanized areas, residents in and around those areas would be subject to increased frequency of construction noise.

Operations. There are 154,998 existing sensitive land uses within 500 feet of major transportation projects (Table 3.13.4-1). Impacts to sensitive receptors resulting from the operation of these major transportation improvement projects would depend on several factors, such as the type of project and adjacent land use. Operational noise levels would fluctuate depending on traffic volume, vehicle speed, vehicle mix, location and distance of the roadway with respect to sensitive receptors, and the presence of intervening objects. Similar to construction impacts, anticipated development to accommodate the policy forecast population, household, and employment would take a variety of forms, with a substantial fraction focused in and around HQTAs, existing urbanized areas, and opportunity areas. Operation of transportation and transit projects in these HQTAs, existing urbanized areas, and opportunity areas would have the potential to increase noise level in excess of standards established in county and city general plans and noise ordinances.

Implementation of transportation projects and land use strategies in the 2016 RTP/SCS would result in exposure of persons to or generation of noise levels in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies, which constitutes a significant impact requiring the consideration of mitigation measures.

IMPACT NOISE-2. Result in the exposure of persons to or generation of excessive groundborne vibration or groundborne noise levels.

Significant Impact

Implementation of transportation projects and land use strategies in the 2016 RTP/SCS would result in the exposure of persons to or generation of excessive groundborne vibration or groundborne noise levels, which constitutes a significant impact. Both construction and operation activities would expose people to excessive groundborne vibration or groundborne noise levels, constituting a potentially significant impact, thus requiring the consideration of mitigation measures.

Construction. Construction of transportation projects and development projects arising from the land use strategies in the 2016 RTP/SCS would result in the exposure of persons to or generation of excessive groundborne vibration or groundborne noise levels. Construction-related vibration has the potential to damage structures and be a source of annoyance to individuals who live or work near these construction activities (Tables 3.13-2 and 3.13-3). Pile drivers can generate vibrations in excess of 0.5 PPV at a distance of 25 feet (Table 3.13.4-2, *Construction Equipment Vibration Levels*), which, as noted in Table 3.13-3, can result in damage to even reinforced concrete. Vibration levels generated by pile driving vary

depending soil conditions, construction methods, and equipment used. Depending on the proximity of existing structures to the pile driving, the structural condition of the existing structures, and the methods of construction used, vibration levels caused by pile driving or other foundation work with a substantial impact component such as blasting, rock or caisson drilling, and site excavation or compaction may be high enough to damage existing structures. A vibration analysis completed by Caltrans indicated that “extreme care must be taken when sustained pile driving occurs within 7.5 m (25 ft) of any building, and 15–30 m (50–100 ft) of a historical building, or building in poor condition.”³²

**TABLE 3.13.4-2
CONSTRUCTION EQUIPMENT VIBRATION LEVELS**

Equipment		PPV at 25 feet
Pile Driver (impact)	Upper Range	1.518
	Typical	0.644

Operation. Operation of transportation projects in the 2016 RTP/SCS would result in the exposure of persons to or generation of excessive groundborne vibration or groundborne noise levels, constituting a significant impact. Operation-related vibration would be a source of annoyance to individuals who live or work near new infrastructure associated with heavy truck and bus traffic along roadways and train traffic along rail lines. The amplitude of vibration generated by heavy trucks, buses, or trains has the potential to result in structural or cosmetic damage if the route is adjacent or in close proximity to fragile older buildings.

Based on vibration measurements throughout California, Caltrans determined that maximum traffic vibration levels from truck traffic drop below the threshold of perception at a distance of 42.5 meters or 140 feet from the source and that vibration levels from truck traffic are unlikely to cause architectural damage to fragile historic buildings unless the building was adjacent or within 5 meters or 17 feet from the source.³³ There are 28,300 sensitive land uses located within 140 feet of new transportation infrastructure; therefore, it is anticipated that the operation activities would result in a significant impact related to the exposure of people to excess groundborne vibration or groundborne noise levels.

³² California Department of Transportation. 20 February 2002. *Transportation Related Earthborne Vibrations*. Technical Advisory, Vibration: TAV-02-01-R9601. Sacramento, CA.

³³ California Department of Transportation. 20 February 2002. *Transportation Related Earthborne Vibrations*. Technical Advisory, Vibration: TAV-02-01-R9601. Sacramento, CA.

A Caltrans study conducted throughout California measured a peak train vibration level of 0.36 in/sec PPV at 3 meters or 10 feet.³⁴ A vibration level of 0.36 in/sec PPV at 3 meters or 10 feet would fall below the threshold of perception at a distance of 80 meters or 263 feet from the source. There are 13,088 sensitive land uses located within 263 feet of new transportation infrastructure; therefore, it is anticipated that the operation activities would result in a significant impact related to the exposure of people to excess groundborne vibration or groundborne noise levels. Furthermore, a vibration level of 0.36 in/sec PPV at 3 meters or 10 feet would potentially result in damage to historic buildings at a distance of 25 meters or 82 feet from the source.

Implementation of transportation projects in the 2016 RTP/SCS would result in the exposure of persons to or generation of excessive groundborne vibration or groundborne noise levels, which constitutes a significant impact requiring the consideration of mitigation measures.

IMPACT NOISE-3. Result in a substantial permanent increase in ambient noise levels in the project vicinity above levels existing without the project.

Significant Impact

Operational activities associated with transportation projects and land use strategies in the 2016 RTP/SCS would generate permanent increases in ambient noise levels in the project vicinity above levels existing without the project (2016 RTP/SCS), constituting a significant impact.

There are 154,998 noise-sensitive land uses located near these projects, including hospitals schools, nursing homes and senior centers (Table 3.13.4-1). At the regional scale, the noise impacts of new highways, highway widening, new HOV lanes, new transit corridors, and increased frequency along existing transit corridors are anticipated to exceed the significance criteria when they occur near sensitive receptors.

Highways. Noise would increase adjacent to major highway project. There are approximately 1,781 miles of major highway, mixed flow, and freight corridor projects.³⁵ The increase in traffic volume anticipated as a result of these projects would result in a permanent increase in ambient noise levels in the project vicinity above levels existing without the project.

Transit. Noise would increase adjacent to new bus and rail corridors. There are approximately 1,169 miles of new bus and rail corridors.³⁶ Crossings that use audible warning signals could also affect nearby residents. Increases in bus and rail traffic could also lead to more horns and/or whistles at crossings near residential areas, which is a source of annoyance, especially at night or in early morning or evening. The increase in noise anticipated as a result of these projects would result in a permanent increase in ambient noise levels in the project vicinity above levels existing without the project.

Freight and Passenger Rail. The 2016 RTP/SCS includes facilities and actions that encourage more efficient intermodal transportation of goods including roadways and train facilities. The number of

³⁴ California Department of Transportation. 20 February 2002. *Transportation Related Earthborne Vibrations*. Technical Advisory, Vibration: TAV-02-01-R9601. Sacramento, CA.

³⁵ SCAG GIS data, 2015.

³⁶ SCAG GIS data, 2015.

freight trains currently operating each day in the SCAG region is dependent on the demands of the industries using rail services and can vary greatly from day to day. The 2016 RTP/SCS includes proposed rail capacity improvements to reduce current passenger/freight rail bottlenecks and increase capacity for existing freight. The number of daily events might increase, and highest peak noise level would likely be increased relative to the existing condition and may expose people adjacent to rail corridors to higher noise levels relative to the existing condition. While increases in rail freight transport would increase the frequency of freight trains, these trains would likely operate on an as-needed basis and would not have a fixed schedule. Therefore, the noise levels and frequency of these trains would continue to vary from day to day. On some days, there may be no increase in freight train activity. However, an increase in train traffic would yield a consequent increase in noise in areas adjacent to rail corridors. The increase in noise anticipated as a result of the greater frequency in train traffic would result in a permanent increase in ambient noise levels in the project vicinity above levels existing without the project.

Land Use. Similarly, anticipated development projects influenced by land use strategies in the 2016 RTP/SCS have a potential to result in more compact and densified infill or mixed-used development in HQTAs and urbanized areas. As described in **Section 3.11, *Land Use and Planning***, the 2016 RTP/SCS would have the potential to change land use patterns in the region in order to accommodate the projected new growth that the region would experience in the next 25 years. The increase in noise anticipated as a result of the change in land use patterns would result in a permanent increase in ambient noise levels in the project vicinity above levels existing without the project.

Operational activities associated with transportation projects in the 2016 RTP/SCS would result in permanent increases in ambient noise levels in the project vicinity above levels existing without the project, which would constitute a significant impact requiring the consideration of mitigation measures.

IMPACT NOISE-4. Result in a substantial temporary or periodic increase in ambient noise levels in the project vicinity above levels existing without the project.

Significant Impact

Both construction and operation of transportation projects in the 2016 RTP/SCS and the associated changes in development patterns influenced by land use strategies would result in a substantial temporary or periodic increase in ambient noise levels in the project above levels existing without the project (2016 RTP/SCS), which constitutes a significant impact requiring the consideration of mitigation measures.

There are 154,998 existing sensitive land uses within 500 feet of major transportation projects (**Table 3.13.4-1**). Impacts to sensitive receptors resulting from the construction of these major transportation improvement projects would depend on several factors, such as the type of project, adjacent land use, and duration and intensity of the construction activities. Construction noise levels would fluctuate depending on how the construction is phased, the equipment mix, the distance between the construction and the nearest sensitive receptor, and the presence of intervening objects. Additionally, construction noise of these major transportation projects, although they are temporary or periodic in nature, would depend on when these projects would be implemented. These transportation projects are within the responsibility and implementing authority of county transportation commissions. SCAG does not implement or build these transportation projects. Subject to subsequent environmental

reviews and decision of their respective lead agencies, major transportation projects may be implemented periodically at any point in time during the next 25 years. Hence, transportation projects included in the 2016 RTP/SCS would have a potential to result in a substantial temporary or periodic increase in ambient noise levels in the vicinity above levels existing without it.

Anticipated development from the land use strategies of the 2016 RTP/SCS may also have a potential to result in a substantial temporary or periodic increase in ambient noise levels in the vicinity above levels existing. As more compact development is anticipated to accommodate the region's new population growth, there would be higher densified development in HQTAs and urbanized areas. Similar to the transportation projects, SCAG does not implement or build development projects. Development projects are within jurisdiction of local governments. Subject to their environmental review process and decision by their respective decision-makers, anticipated development projects may be built at any point in time during the lifetime of the 2016 RTP/SCS. Hence, land use strategies included in the 2016 RTP/SCS would have a potential to result in a substantial temporary or periodic increase in ambient noise levels in the vicinity above levels existing without it.

IMPACT NOISE-5. For a project located within an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, result in the exposure of people residing or working in the project area to excessive noise levels.

Less than Significant Impact

Implementation of transportation projects in the 2016 RTP/SCS would result in less than significant impacts related to projects located within an airport land use plan or, where such a plan has not been adopted, within 2 miles of a public airport or public use airport, that would expose people residing or working in the project area to excessive noise levels.

The SCAG region contains 57 airports, with 12 major commercial airports serving the region (Table 3.13.2-2).^{37,38} There are approximately 41 linear miles of major projects and 10,785 acres of HQTAs within the 65 dBA CNEL of the 12 major airports.³⁹ According to the 2012 RTP/SCS, the regional passenger demand forecast is 145.9 million annual passengers (MAP) in 2035.⁴⁰ According to the August 6, 2015, Staff Report to SCAG Transportation Committee, the 2016 RTP/SCS has a regional passenger demand forecast of 136.2 MAP in 2040, which is a decrease of approximately 7 percent at the regional level.⁴¹ Furthermore, major public airports have an airport land use plan that provides guidance on noise levels and land use in adjacent areas. Therefore, impacts would be less than significant, and the consideration of mitigation measures is not required.

³⁹ SCAG GIS data, 2015.

⁴⁰ Southern California Association of Governments. April 2012. *2012–2035 Regional Transportation Plan / Sustainable Communities Strategy*. Los Angeles, CA.

⁴¹ Southern California Association of Governments. 6 August 2015. Staff Report to Transportation Committee. Los Angeles, CA. Available at: <http://www.scag.ca.gov/programs/Pages/ASA.aspx>

IMPACT NOISE-6. For a project within the vicinity of a private airstrip, result in the exposure of people residing or working in the project area to excessive noise levels.

Less than Significant Impact

Implementation of transportation projects in the 2016 RTP/SCS would result in less than significant impacts related to projects within the vicinity of a private airstrip that would expose people residing or working in the project area to excessive noise levels.

The SCAG region includes 14 private airstrips, 3 of which are within 1 mile of an HQTA.⁴² As described above, the 2012 RTP/SCS had forecasted the regional passenger demand forecast of 145.9 MAP in 2035.⁴³ According to the August 6, 2015, Staff Report to SCAG Transportation Committee, the 2016 RTP/SCS has a regional passenger demand forecast of 136.2 MAP in 2040, which is a decrease of approximately 7 percent.⁴⁴ Therefore, at the regional level, impacts would be less than significant, and the consideration of mitigation measures is not required.

3.13.5 CUMULATIVE IMPACTS

IMPACT NOISE-1. Result in exposure of persons to or generation of noise levels in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies.

Significant Impact

Implementation of the 2016 RTP/SCS would result in significant cumulative impacts from the exposure of persons to or generation of noise levels in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies. Grading and construction activities would generate temporary increases in noise levels, and operational activities resulted from implementation of transportation projects and anticipated land use development would generate permanent increases in noise levels in excess of standards established in the local general plan or noise ordinance, constituting a significant impact requiring the consideration of mitigation measures.

⁴² SCAG GIS data, 2015.

⁴³ Southern California Association of Governments. April 2012. 2012–2035 Regional Transportation Plan / Sustainable Communities Strategy. Los Angeles, CA.

⁴⁴ Southern California Association of Governments. 6 August 2015. Staff Report to Transportation Committee. Los Angeles, CA. Available at: <http://www.scag.ca.gov/programs/Pages/ASA.aspx>

IMPACT NOISE-2. Result in the exposure of persons to or generation of excessive groundborne vibration or groundborne noise levels.

Significant Cumulative Impact

Implementation of the 2016 RTP/SCS , when taken into consideration with all other infrastructure and development project that may occur in the region between 2016 and 2040, would result in significant cumulative impacts from the exposure of persons to or generation of excessive groundborne vibration or groundborne noise levels. Both construction and operation activities would expose people to excessive groundborne vibration or groundborne noise levels, constituting a significant impact, requiring the consideration of mitigation measures.

IMPACT NOISE-3. Result in a substantial permanent increase in ambient noise levels in the project vicinity above levels existing without the project.

Significant Cumulative Impact

Operational activities associated with the implementation of the 2016 RTP/SCS would result in significant cumulative impacts from the generation of permanent increases in ambient noise levels, when taken into consideration with all other transportation infrastructure and development projects that may occur in the region between 2016 and 2040, in the vicinity above levels existing without the Plan due to the presence of 154,998 noise-sensitive land uses located near these projects (Table 3.13.4-1), constituting a significant impact requiring the consideration of mitigation measures.

IMPACT NOISE-4. Result in a substantial temporary or periodic increase in ambient noise levels in the project vicinity above levels existing without the project.

Significant Cumulative Impact

Implementation of the 2016 RTP/SCS would result in significant cumulative impacts from the generation of a substantial temporary or periodic increase in ambient noise levels in the vicinity above levels existing without the Plan), when taken into consideration with all other transportation and ancillary infrastructure and development projects that may occur in the region between 2016 and 2040, due to the presence of 154,998 noise-sensitive land uses located near these projects (Table 3.13.4-1), constituting a significant impact requiring the consideration of mitigation measures.

IMPACT NOISE-5. For a project located within an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, result in the exposure of people residing or working in the project area to excessive noise levels.

Less than Significant Cumulative Impact

Implementation of the 2016 RTP/SCS would result in significant cumulative impacts related to projects located within an airport land use plan or, where such a plan has not been adopted, within 2 miles of a public airport or public use airport, which would expose people residing or working in the project area to excessive noise levels. Areas that are within the noise contours of 65 dBA CNEL and above, associated with airport activities, are considered to be incompatible with certain land uses, including residences, schools, hospitals, and childcare facilities.⁴⁵ There are approximately 23,082 locations of incompatible land uses and approximately 41 linear miles of major projects within the 65 dBA CNEL of the 12 major airports.⁴⁶ The implementation of the 2016 RTP/SCS would add both construction and operation noise to an area that is already at the threshold for significant impact. Implementation of mitigation measures, as described below, would reduce impacts, but may not reduce impacts to below the level of significance in all instances. Therefore, cumulative impacts would remain significant and unavoidable.

IMPACT NOISE-6. For a project within the vicinity of a private airstrip, result in the exposure of people residing or working in the project area to excessive noise levels.

Less than Significant Impact

Implementation of the 2016 RTP/SCS would be anticipated to result in less than significant cumulative impacts related to projects within the vicinity of a private airstrip that would expose people residing or working in the project area to excessive noise levels. Airport noise is generated primarily by aircraft takeoffs and landings, which will vary depending on the aircraft's weight and the number, type, and location of the engines. Typically, most private airstrips will have a lower volume of air traffic and smaller planes that result in a lower noise level than major airports. Furthermore, in the SCAG region, there are only 3 private airstrips within a 1-mile radius of major transportation projects.⁴⁷ The consideration of mitigation measures is not required.

3.13.6 MITIGATION MEASURES

Mitigation measures as they pertain to each CEQA question related to noise are described below. Mitigation measures are categorized into two categories: SCAG mitigation and project-level mitigation measures. SCAG mitigation measures shall be implemented by SCAG over the lifetime of the 2016

⁴⁵ Federal Aviation Administration. October 2007. *Environmental Desk Reference for Airport Actions*. Chapter 17, Noise. Washington, DC.

⁴⁶ SCAG GIS data, 2015.

⁴⁷ SCAG GIS data, 2015.

RTP/SCS. Project-level mitigation measures can and should be implemented by the Lead Agencies for transportation and development projects, as applicable and feasible.

IMPACT NOISE-1. Result in exposure of persons to or generation of noise levels in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies.

SCAG Mitigation Measures

MM-NOISE-1(a): SCAG shall coordinate with member agencies as part of SCAG's outreach and technical assistance to local governments under Toolbox Tuesday Training series to encourage projects involving residential and commercial land uses to be developed in areas that are normally acceptable or conditionally acceptable, consistent with the Governor's Office of Planning and Research Noise Element Guidelines.

Project-Level Mitigation Measures

MM-NOISE-1(b): Consistent with the provisions of Section 15091 of the State CEQA Guidelines, SCAG has identified mitigation measures capable of avoiding or reducing the significant effects of noise impacts that are in the jurisdiction and responsibility of public agencies and/or Lead Agencies. Where the Lead Agency has identified that a project has the potential for significant effects, the Lead Agency can and should consider mitigation measures to ensure consistency with the Federal Noise Control Act, California Government Code Section 65302, the Governor's Office of Planning and Research Noise Element Guidelines, and the noise ordinances and general plan noise elements for the counties or cities where projects are undertaken, Federal Highway Administration and Caltrans guidance documents and other health and safety standards set forth by federal, state, and local authorities that regulate noise levels, as applicable and feasible. Such measures may include the following or other comparable measures identified by the Lead Agency:

- Install temporary noise barriers during construction.
- Include permanent noise barriers and sound-attenuating features as part of the project design.
- Schedule construction activities consistent with the allowable hours pursuant to applicable general plan noise element or noise ordinance. Where construction activities are authorized outside the limits established by the noise element of the general plan or noise ordinance; notify affected sensitive noise receptors and all parties who will experience noise levels in excess of the allowable limits for the specified land use, of the level of exceedance and duration of exceedance; and provide a list of protective measures that can be undertaken by the individual, including temporary relocation or use of hearing protective devices.
- Limit speed and/or hours of operation of rail and transit systems during the selected periods of time to reduce duration and frequency of conflict with adopted limits on noise levels.
- Post procedures and phone numbers at the construction site for notifying the Lead Agency staff, local Police Department, and construction contractor (during regular construction hours and off-hours), along with permitted construction days and hours,

complaint procedures, and who to notify in the event of a problem.

- Notify neighbors and occupants within 300 feet of the project construction area at least 30 days in advance of anticipated times when noise levels are expected to exceed limits established in the noise element of the general plan or noise ordinance.
- Hold a preconstruction meeting with the job inspectors and the general contractor/on-site project manager to confirm that noise measures and practices (including construction hours, neighborhood notification, posted signs, etc.) are completed.
- Designate an on-site construction complaint and enforcement manager for the project.
- Ensure that construction equipment are properly maintained per manufacturers' specifications and fitted with the best available noise suppression devices (e.g., mufflers, silencers, wraps). All intake and exhaust ports on power equipment shall be muffled or shielded.
- Ensure that impact tools (e.g., jack hammers, pavement breakers, and rock drills) used for project construction are hydraulically or electrically powered to avoid noise associated with compressed air exhaust from pneumatically powered tools. However, where use of pneumatic tools is unavoidable, an exhaust muffler on the compressed air exhaust can and should be used. External jackets on the tools themselves can and should be used, if such jackets are commercially available and this could achieve a reduction of 5 dBA. Quieter procedures can and should be used, such as drills rather than impact equipment, whenever such procedures are available and consistent with construction procedures.
- Ensure that construction equipment are not idle for an extended time in the vicinity of noise-sensitive receptors.
- Locate fixed/stationary equipment (such as generators, compressors, rock crushers, and cement mixers) as far as possible from noise-sensitive receptors.
- Locate new roadway lanes, roadways, rail lines, transit-related passenger station and related facilities, park-and-ride lots, and other new noise-generating facilities away from sensitive receptors to the maximum extent feasible.
- Where feasible, eliminate noise-sensitive receptors by acquiring freeway and rail rights-of-way.
- Use noise barriers to protect sensitive receptors from excessive noise levels during construction.
- Construct sound-reducing barriers between noise sources and noise-sensitive receptors to minimize exposure to excessive noise during operation of transportation improvement projects, including but not limited to earth-berms or sound walls.
- Where feasible, design projects so that they are depressed below the grade of the existing noise-sensitive receptor, creating an effective barrier between the roadway and sensitive receptors.
- Where feasible, improve the acoustical insulation of dwelling units where setbacks and sound barriers do not provide sufficient noise reduction.
- Monitor the effectiveness of noise reduction measures by taking noise measurements and installing adaptive mitigation measures to achieve the standards for ambient noise levels established by the noise element of the general plan or noise ordinance.

IMPACT NOISE-2. Result in the exposure of persons to or generation of excessive groundborne vibration or groundborne noise levels.

SCAG Mitigation Measures

MM-NOISE-1(a).

Project-Level Mitigation Measures

MM-NOISE-1(b).

MM-NOISE-2(b): Consistent with the provisions of Section 15091 of the State CEQA Guidelines, SCAG has identified mitigation measures capable of avoiding or reducing the significant effects of vibration impacts that are in the jurisdiction and responsibility of public agencies and/or Lead Agencies. Where the Lead Agency has identified that a project has the potential for significant effects, the Lead Agency can and should consider mitigation measures to ensure compliance with the Federal Transportation Authority and Caltrans guidance documents, county or city transportation commission, noise and vibration ordinances and general plan noise elements for the counties and cities where projects are undertaken and other health and safety regulations set forth by federal state, and local authorities that regulate vibration levels, as applicable and feasible. Such measures may include the following or other comparable measures identified by the Lead Agency:

- For projects that require pile driving or other construction techniques that result in excessive vibration, such as blasting, determine the potential vibration impacts to the structural integrity of the adjacent buildings within 50 feet of pile driving locations.
- For projects that require pile driving or other construction techniques that result in excessive vibration, such as blasting, determine the threshold levels of vibration and cracking that could damage adjacent historic or other structure, and design means and construction methods to not exceed the thresholds.
- For projects where pile driving would be necessary for construction due to geological conditions, utilize quiet pile driving techniques such as predrilling the piles to the maximum feasible depth, where feasible. Predrilling pile holes will reduce the number of blows required to completely seat the pile and will concentrate the pile driving activity closer to the ground where pile driving noise can be shielded more effectively by a noise barrier/curtain.
- For projects where pile driving would be necessary for construction due to geological conditions, utilize quiet pile driving techniques such as the use of more than one pile driver to shorten the total pile driving duration.

IMPACT NOISE-3. Result in a substantial permanent increase in ambient noise levels in the project vicinity above levels existing without the project.

SCAG Mitigation Measures

See MM-NOISE-1(a).

Project-Level Mitigation Measures

MM-NOISE-1(b).

IMPACT NOISE-4. Result in a substantial temporary or periodic increase in ambient noise levels in the project vicinity above levels existing without the project.

SCAG Mitigation Measures

MM-NOISE-1(a).

Project-Level Mitigation Measures

MM-NOISE-1(b).

3.13.7 Level of Significance after Mitigation

IMPACT NOISE-1. Result in exposure of persons to or generation of noise levels in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies.

Implementation of Mitigation Measures MM-NOISE-1(a) and MM-NOISE-1(b) may not reduce noise levels to below the level established in the local general plan or noise ordinance, or applicable standards of other agencies in all cases; therefore, direct, indirect, and cumulative impacts would remain significant and unavoidable.

IMPACT NOISE-2. Result in the exposure of persons to or generation of excessive groundborne vibration or groundborne noise levels.

Implementation of Mitigation Measures MM-NOISE-1(a), MM-NOISE-1(b), and MM-NOISE-2(a) may not reduce vibration levels to below the level of significance in all cases; therefore, direct, indirect, and cumulative impacts would remain significant and unavoidable.

IMPACT NOISE-3. Result in a substantial permanent increase in ambient noise levels in the project vicinity above levels existing without the project.

Implementation of Mitigation Measures MM-NOISE-1(a) and MM-NOISE-1(b) may not reduce noise levels to below the level of significance in all cases; therefore, direct, indirect, and cumulative impacts would remain significant and unavoidable.

IMPACT NOISE-4. Result in a substantial temporary or periodic increase in ambient noise levels in the project vicinity above levels existing without the project.

Implementation of Mitigation Measures **MM-NOISE-1(a)** and **MM-NOISE-2(b)** may not reduce noise levels to below the level of significance in all cases; therefore, direct, indirect, and cumulative impacts would remain significant and unavoidable.

POPULATION, HOUSING, AND EMPLOYMENT

This section of the Program Environmental Impact Report (PEIR) describes population, housing, and employment in the Southern California Association of Governments (SCAG) region; discusses the potential impacts of the proposed 2016 Regional Transportation Plan/Sustainable Communities Strategy (“2016 RTP/SCS,” “Plan,” or “Project”) on population, housing, and employment; identifies mitigation measures for the impacts; and evaluates the residual impacts. The effects on population, housing, and employment were evaluated in accordance with Appendix G of the 2015 California Environmental Quality Act Guidelines (State CEQA Guidelines). Population, housing, and employment within the SCAG region were evaluated at the programmatic level of detail, in relation to the general plans of the six counties and the 191 cities within the SCAG region; a review of demographic data available from the U.S. Census, the California Department of Finance, and SCAG; a review of related literature germane to the SCAG region; as well as a review of SCAG’s 2012 RTP/SCS PEIR.¹

The SCAG region is composed of six counties and totals approximately 38,000 square miles in area (almost 25 million acres). The SCAG region is home to approximately 19 million people in 2015, and is one of the most racially and ethnically diverse regions in the United States. The SCAG region contributes \$1,005 billion of gross regional product (GRP) and supports approximately 8 million jobs, thus making it the 16th largest economy in the world.^{2,3} Two factors account for population change: natural increase and net migration. Through 1990, net migration was a substantial contributor to net growth in the SCAG region; however, since that time net migration has slowed, contributing to an overall slowing of growth in the SCAG region to levels that are comparable to other areas of California and the United States as a whole. The availability of jobs attracts people to the region, whereas in times of recession, the reverse is true. The most recent recession of the 2000s (2007–2009) had a negative effect on the region’s population growth. As a result, the annual average growth rate of population in the region during those periods was 0.9 percent.⁴ The growth of the motion picture, petroleum, and aircraft industries and the region’s reputation as the land of opportunity explain the tremendous growth in the region during the 1980s. The recession in the 1990s was the result of major cuts in the national defense budget, which affected the region much more severely than the rest of the nation. In the 2000 to 2010 time period, households in the SCAG region were generally aging, with the percent of households in the 15–24 and 35–54 age brackets declining and the 24–34 and 55–75 age brackets increasing. In this same period, Hispanic and Asian householders increased, and average household size remained stable or decreased in all categories. California’s homeownership rate in 2010 was the third lowest in the nation at 56 percent, while Southern California’s homeownership rate was even lower at 54 percent.⁵

Definitions

Definitions of terms used in the regulatory framework, characterization of baseline conditions, and impact analysis for population, housing, and employment are provided.

Employment: Paid employment consists of full- and part-time employees, including salaried officers and executives of corporations, who were on the payroll in the pay period. Included are employees on sick leave, holidays, and vacations; not included are proprietors and partners of unincorporated businesses.

Household: A household consists of all the people who occupy a housing unit. A house, an apartment or other group of rooms, or a single room are regarded as housing units when occupied or intended for occupancy as separate living quarters, that is, when the occupants do not live with any other persons in the structure and there is direct access from the outside or through a common hall. A household includes the related family members and all the unrelated people, if any, such as lodgers, foster children, wards, or employees who share the housing unit. A person living alone in a housing unit, or a group of unrelated people sharing a housing unit such as partners or roomers, is also counted as a household. The count of households excludes group quarters.

Householder: The householder refers to the person (or one of the people) in whose name the housing unit is owned or rented (maintained) or, if there is no such person, any adult member, excluding roomers, boarders, or paid employees. If the house is owned or rented jointly by a married couple, the householder may be either the husband or the wife. The person designated as the householder is the “reference person” to whom the relationship of all other household members, if any, is recorded.

Housing: As used in this analysis, *housing* is data available from the U.S. Census for the SCAG region for the period of 2000 through 2035.

Population: As used in this analysis, *population* is data available from the U.S. Census for the SCAG region for the period of 1900 through 2010, with population projections available from SCAG in 2014 for the projected population growth period of 2008 through 2035.

Regional Housing Needs Assessment (RHNA): The RHNA quantifies the need for housing within each jurisdiction during specified planning periods. The RHNA is mandated by state housing law as part of the periodic process of updating local housing elements of the General Plan. State law requires SCAG to determine the existing and projected housing need for its region. SCAG’s region encompasses Imperial, Los Angeles, Orange, Riverside, San Bernardino, and Ventura Counties and 191 cities. The intention of the RHNA process is to create a better balance of jobs and housing in communities, ensure the availability of decent affordable housing for all income groups, and achieve sustainability through long-term strategic land use planning. The RHNA consists of two measurements:

- 1) Existing need for housing: The existing need assessment examines key variables from Census data in order to measure ways in which the housing market is not meeting the needs of current residents. This includes the number of low-income households paying more than 30 percent of their income for housing, as well as how many people occupy overcrowded housing units.

- 2) Future need for housing: The future need assessment is determined by SCAG's growth forecast and public participation process. Each new household (created by a young adult moving out of a parent's home or a family moving into a community for employment) creates the need for more housing. The anticipated need is then adjusted to account for an ideal level of vacant units.

3.14.1 REGULATORY FRAMEWORK

Federal

Federal Uniform Act (URA) (1970)

The Federal Uniform Act (Uniform Relocation Assistance and Real Property Acquisition Policies Act; 42 U.S. Code [USC] 61), passed by Congress in 1970, is a federal law that establishes minimum standards for federally funded programs and projects that require the acquisition of real property (real estate) or displace persons from their homes, businesses, or farms. The Uniform Act's protections and assistance apply to the acquisition, rehabilitation, or demolition of real property for federal or federally funded projects.

Moving Ahead for Progress in the 21st Century (MAP-21)

MAP-21 (23 USC 134(a), (h), and (E)) replaces the Safe, Accountable, Flexible, Efficient Transportation Equity Act: A Legacy for Users (SAFETEA-LU; Public Law 109-59) as the nation's surface transportation program and extended the provisions for fiscal year (FY) 12 with new provisions for FY 13. MAP-21 funds surface transportation programs at over \$105 billion for FY 2013 and FY 2014. It is intended to create a streamlined, performance-based, and multimodal program to address challenges facing the U.S. transportation system. These challenges include improving safety, maintaining infrastructure condition, reducing traffic congestion, improving efficiency of the system and freight movement, protecting the environment, and reducing delays in project delivery. MAP-21 builds on and refines many of the highway, transit, bike, and pedestrian programs and policies first established under the Intermodal Surface Transportation Efficiency Act of 1991 (ISTEA; Public Law 102-240). One of most significant changes from MAP-21 affecting metropolitan planning organizations (MPOs), states, and transit operators is the new requirement for performance-based planning that involves use of performance measures and target setting. The U.S. Department of Transportation (U.S. DOT) is in the process of the rulemaking effort to implement these MAP-21 requirements.

Section 134(a) of MAP-21 encourages and promotes the safe and efficient management, operation, and development of surface transportation systems that will serve the mobility needs of people and freight that will encourage economic growth and development within and between states and urbanized areas, while minimizing transportation-related fuel consumption and air pollution through metropolitan and statewide transportation planning processes. Section 134(a) also encourages the continued improvement and evolution of the metropolitan and statewide transportation planning processes by metropolitan planning organizations, state departments of transportation, and public transit operators as guided by the planning factors identified in Subsection (h) and Section 135 (d). Subsection (h) describes the scope of the planning process.

(1) In general. The metropolitan planning process for a metropolitan planning area under this section shall provide for consideration of projects and strategies that will:

- (A) support the economic vitality of the metropolitan area, especially by enabling global competitiveness, productivity, and efficiency;
- (B) increase the safety of the transportation system for motorized and nonmotorized users;
- (C) increase the security of the transportation system for motorized and nonmotorized users;
- (D) increase the accessibility and mobility of people and for freight;
- (E) protect and enhance the environment, promote energy conservation, improve the quality of life, and promote consistency between transportation improvements and state and local planned growth and economic development patterns;
- (F) enhance the integration and connectivity of the transportation system, across and between modes, for people and freight;
- (G) promote efficient system management and
- (H) emphasize the preservation of the existing transportation system.

Federal Planning Regulations

Title 23 Code of Federal Regulations (CFR) 450.322(e) requires in the development of the regional transportation plan that the MPO validate data utilized in preparing other existing modal plans for providing input to the regional transportation plan. In updating the plan, the MPO shall base the update on the latest available estimates and assumptions for population, land use, travel, employment, congestion, and economic activity. The MPO is required to prepare and approve the regional transportation plan.

State

1969 California Housing Element Law

The California Housing Element Law (California Government Code §65300) requires SCAG and other regional councils of government in California to determine the existing and projected regional housing needs for persons at all income levels. According to California Government Code §65300, each governing body of a local government in California is required to adopt a comprehensive, long-term general plan for the physical development of the city, city and county, or county. The California Housing Element Law, enacted in 1969, mandates that local governments adequately plan to meet the existing and projected housing needs of all economic segments of the community as part of the housing element, one of the seven mandated elements of the local general plan. The California Housing Element Law is implemented by the California Department of Housing and Community Development (HCD), which is responsible for reviewing local governments' housing elements for compliance with state law and providing written comments to the local governments. Using the information provided by local governments in its Housing Element, the HCD determines the regional housing need for each county and allocates funding to meet this need to the council of governments for distribution to its jurisdictions. The HCD also oversees distribution of funding related to the regional housing need by the council of governments to the local governments to ensure that funds are appropriately allocated. The

requirements for the Housing Element are delineated in California Government Code Section 65580–65589.9.

Regional Housing Needs Assessment

California Government Code §65583(a)(1) and §65584 require that each Council of Governments consult with the California Division of Housing Policy Development (HPD) and shall determine each region's existing and projected housing need through preparation of an RHNA that allocates a share of the regional housing need to each city, county, or city and county based on an analysis of population and employment trends and documentation of projections and a quantification of the locality's existing and projected housing needs for all income levels, including extremely low income households, as defined in subdivision (b) of Section 50105 and Section 50106 of the Health and Safety Code. The RHNA is a key tool for SCAG and its member governments to plan for this growth. The RHNA quantifies the regional need for housing that is allocated to each jurisdiction for a certain planning period (e.g., in the next RHNA cycle, the period is from 2014 to 2021).

This region's RHNA is produced periodically by SCAG, as mandated by state law, to coincide with the region's schedule for preparing Housing Elements. It consists of two measurements of housing need: (1) existing need and (2) future need for very-low income, low-income, moderate, and above-moderate income categories.

The existing need assessment is based on data from the most recent U.S. Census to measure ways in which the housing market is not meeting the needs of current residents. These variables include the number of low-income households paying more than 30 percent of their income for housing, as well as severe overcrowding.

The future need for housing is determined primarily by the forecasted growth in households in a community, based on historical growth patterns, job creation, household formation rates, and other factors to estimate how many households will be added to each community over the projection period. The housing need for new households is then adjusted to account for an ideal level of vacancy needed to promote housing choice, maintain price competition, and encourage acceptable levels of housing upkeep and repair. The RHNA also accounts for units expected to be lost due to demolition, natural disaster, or conversion to nonhousing uses. The sum of these factors—household growth, vacancy need, and replacement need—form the “construction need” assigned to each community.

Finally, the RHNA considers how each jurisdiction might grow in ways that will decrease the concentration of low-income households in certain communities. The need for new housing is distributed among income groups so that each community moves closer to the regional average income distribution.

Sustainable Communities and Climate Protection Act of 2008

Senate Bill 375 (SB 375; Chapter 728, Statutes of 2008) focuses on aligning transportation, housing, and other land uses to achieve regional greenhouse gas (GHG) emission reduction targets established under the California Global Warming Solutions Act, also known as Assembly Bill 32 (AB 32). SB 375 requires California Metropolitan Planning Organizations to develop an SCS as part of the RTP, with the purposes of identifying policies and strategies to reduce per capita passenger vehicle-generated GHG emissions.

The SCS must identify the general location of land uses, residential densities, and building intensities within the region; identify areas within the region sufficient to house all the population of the region; identify areas within the region sufficient to house an eight-year projection of the regional housing need; identify a transportation network to service the regional transportation needs; gather and consider the best practically available scientific information regarding resources areas and farmland in the region; consider the state housing goals; set forth a forecasted development pattern for the region; and allow the regional transportation plan to comply with the federal Clean Air Act (CAA) of 1970 (42 USC § 7401 et seq.). The development pattern in the SCS, when integrated with the transportation network and other transportation measures and policies, must reduce the GHG from automobiles and light duty trucks to achieve the GHG emission reduction targets approved by the California Air Resources Board (CARB). If the SCS does not achieve the GHG emission targets set by CARB, an Alternative Planning Strategy (APS) must be developed to demonstrate how the targets could be achieved.

SB 375 also imposes a number of new requirements on the regional housing needs process. Prior to SB 375, the regional transportation plan and regional housing needs processes were not required to be coordinated. SB 375 now synchronizes the schedules of the RHNA and regional transportation plan processes. The RHNA, which is developed after the regional transportation plan, must also allocate housing units within the region consistent with the development pattern included in the SCS. Previously, the RHNA determination was based on population projections produced by the Department of Finance. SB 375 requires the determination to be based upon population projections by the Department of Finance and regional population forecasts used in preparing the regional transportation plan. If the total regional population forecasted and used in the regional transportation plan is within a range of 3 percent of the regional population forecast completed by the Department of Finance for the same planning period, then the population forecast developed by the regional agency and used in the regional transportation plan shall be the basis for the determination. If the difference is greater than 3 percent, then the two agencies shall meet to discuss variances in methodology and seek agreement on a population projection for the region to use as the basis for the RHNA determination. If no agreement is reached, then the basis for the RHNA determination shall be the regional population projection created by the Department of Finance.

Existing law requires local governments to adopt a housing element as part of their general plan. Unlike the rest of the general plan, where updates sometimes occur at intervals of 20 years or longer, under previous law the housing element was required to be updated as frequently as needed and no less than every five years. Under SB 375, this period has been lengthened to eight years and timed so that the housing element period begins no less than 18 months after adoption of the regional transportation plan to encourage closer coordination between the housing and transportation planning. SB 375 also changes the implementation schedule required in each housing element. Previous law required the housing element to contain a program which set forth a five-year schedule of to implement the goals and objectives of the housing element. The new law instead requires this schedule of actions to occur during the eight-year housing element planning period, and requires each action have a timetable for implementation.

California Relocation Assistance Act

The California Relocation Assistance Act (Government Code Section 7260 et seq.) establishes uniform policies to provide for the fair and equitable treatment of people displaced from their homes or businesses as a direct result of state and/or local government projects or programs. The California

Relocation Assistance Act requires that comparable replacement housing be made available to displaced persons within a reasonable period of time prior to the displacement. Displaced persons or businesses are assured payment for their acquired property at fair market value. Relocation assistance in the form of advisory assistance and financial benefits would be provided at the local level. This includes aid in finding a new home location, payments to help cover moving costs, and additional payments for certain other costs.

Senate Bill 862 Greenhouse Gases Emission Reduction

In June 2014, new state law, SB 862, established long-term cap and trade funding programs for transit, sustainable communities and affordable housing, and high speed rail. SB 862 allocates 60 percent of ongoing cap and trade revenues, beginning in 2015–2016, to these programs. The remaining 40 percent is to be determined by future legislatures.⁶ A minimum of 25 percent of cap and trade dollars must go to projects that provide benefits to disadvantaged communities, and a minimum of 10 percent must go to projects located within those disadvantaged communities. In addition, this bill would establish the CalRecycle Greenhouse Gas Reduction Revolving Loan Program and Fund.

Senate Bill 535: California Global Warming Solutions Act of 2006: Greenhouse Gas Reduction Fund (GGRF)

SB 535 was signed into law by Governor Brown on September 30, 2012. This bill sets aside cap and trade revenues to mitigate climate change in disadvantaged communities. The California EPA is the responsible agency for identifying disadvantaged communities for potential investment. The California Department of Finance must allocate 25 percent of the available moneys in the GGRF to projects that benefit disadvantaged communities and a minimum of 10 percent to projects located within disadvantaged communities.

Homeowners and Private Property Protection Act

In 2008, California voters approved Proposition 99, the Homeowners and Private Property Protection Act, which amended Section 19 of Article 1 of the California Constitution so that local governments are prohibited from using eminent domain authority to acquire an owner-occupied residence for the purposes of conveying it to a private recipient, with limited exceptions. Proposition 99 applies only to owner-occupied residences. Cities may still use eminent domain authority to convey multifamily and nonresidential property to other private parties.

Local

Housing Elements of County and City General Plans

The most comprehensive and detailed land use planning, including that for population, housing, and employment in the SCAG region is provided by city and county General Plans, which local governments

⁶ California Transit Association. 17 June 2014. *Overview of 2014 Cap and Trade Legislation and Opportunities for Public Transit: Implementing 2014-15 Appropriations and a Long-Term Cap and Trade Funding Program*. Available at: <http://www.calcog.org/DocumentCenter/View/313>

are required by state law to prepare as a guide for future development. State law mandates that local governments adequately plan to meet the existing and projected housing needs of all economic segments of the community as discussed above. Housing policy in the state rests largely upon the effective implementation of local general plans and, in particular, local housing elements.

Local Coastal Programs

The three counties and 27 cities within the SCAG region with coastlines are mandated to prepare Local Coastal Programs (LCP) as a result of the California Coastal Act of 1976. The LCPs prepared by these local jurisdictions may contain goals and policies related to housing type, location, and affordability.

3.14.2 EXISTING CONDITIONS

SCAG is the nation's largest metropolitan planning organization, representing six counties, 191 cities, and approximately 19 million residents. The SCAG region is the second most populous metropolitan region in the nation. The California State Department of Finance estimates that the population of the region reached 18,545,063 in 2014.⁷ Approximately 6 percent of the national population lives in the SCAG region, and for over half a century the region has been home to approximately half the population of California.

The SCAG region contributes \$1,005 billion of GRP and supports approximately 8 million jobs, thus making it the 16th largest economy in the world, behind South Korea.^{8,9} However, in 2014, the U.S. Census Bureau reported that poverty levels in the region continued to rise despite economic recovery.

According to data from the six counties in the SCAG region, in 2014 there were approximately 18,545,063 people living in the region, comprising 6,029,326 households and 8,327,300 jobs (**Table 3.14.2-1, 2014–2040 Population, Households, and Employment Projections in the SCAG Region**). The highest population densities occur in Los Angeles County, and lowest densities occur in the unincorporated territories of the counties. Based on U.S. Census data from 2010, the average household size ranges from 3.0 in Los Angeles and Orange Counties to 3.5 in Imperial County. Employment ranges from a high of 76.5 percent of the 2014 population between the ages of 18 and 64 in Ventura County to a low of 57.6 in Imperial County.¹⁰

NOTE:
Projected numbers are rounded to the nearest 1,000.
SOURCE:
SCAG modeling, 2015.

In order to develop growth forecasts, SCAG encourages and utilizes the participation and cooperation of all local government partners within the SCAG region. SCAG uses a bottom-up planning process by which all local governments are informed of the 2016 RTP/SCS planning process and have clear and adequate opportunities to provide input. Growth forecasts and land use updates for development of the 2016 RTP/SCS have been developed through this bottom-up local input process, reflecting the following guiding principles approved SCAG's Community, Economic and Human Development Committee on October 8, 2015:¹¹

- Principle #1: The Draft PGF for the 2016 RTP/SCS shall be adopted by the Regional Council at the jurisdictional level, thus directly reflecting the population, household and employment growth projections derived from the local input and previously reviewed and approved by SCAG's local jurisdictions. The policy growth forecast (PGF) maintains these projected jurisdictional growth totals, meaning future growth is not reallocated from one local jurisdiction to another.
- Principle #2: The Draft PGF at the Transportation Analysis Zone (TAZ) level is controlled to be within the density ranges¹² of local general plans or input received from local jurisdictions in this most recent round of review.
- Principle #3: For the purpose of determining consistency for CEQA streamlining, lead agencies such as local jurisdictions have the sole discretion in determining a local project's consistency with the propose 2016 RTP/SCS.
- Principle #4: TAZ level data or any data at a geography smaller than the jurisdictional level is included in the Draft PGF only to conduct the required modeling analysis and is therefore, only advisory and non-binding because SCAG's sub-jurisdictional forecasts are not to be adopted as part of the 2016 RTP/SCS. After SCAG's adoption of the PGF at the jurisdictional level, the TAZ level data may be used by jurisdictions in local planning as it deems appropriate and there is no obligation by a jurisdiction to change its land use policies, General Plan, or regulations to be consistent with the RTP/SCS. SCAG staff plans to monitor the use of this data after the adoption of the RTP/SCS to encourage appropriate use.
- Principle #5: SCAG staff continues to communicate with other agencies who use SCAG sub-jurisdictional level data to ensure that the "advisory & non-binding" nature of the dataset is appropriately maintained.

Population Growth

The population in the SCAG region has changed drastically over the more than hundred-year period from 1900 to 2012 (Table 3.14.2-2, *SCAG Population and Percentage of U.S. and California Populations, 1900–2012*). Between 1900 and 1910, the SCAG region comprised less than 1 percent of the U.S. population and less than 30 percent of the state population. In the 1920s, population nearly doubled in the SCAG region and represented over 1 percent of the nation's population and over 30 percent of the state's population. Between 1930 and 1960, the SCAG region grew to represent 2 to nearly 5 percent of the national population, housing nearly half the state population. Since 1970, the

¹¹ Southern California Association of Governments. 5 November 2015. *Item No. 1 Staff Report: 2016-2040 Regional Transportation Plan/Sustainable Communities Strategy (2016 RTP/SCS) – Proposed Major Components*. Available at: <http://www.scag.ca.gov/committees/CommitteeDocLibrary/jointRCPC110515fullagn.pdf>

¹² With the exception of 6% of TAZs that have an average density below the density range of local general plans.

SCAG region has housed approximately half of the state population, representing 5 to 6 percent of the national population.

**TABLE 3.14.2-2
SCAG POPULATION AND PERCENTAGE OF U.S. AND CALIFORNIA POPULATIONS, 1900–2012**

Year	Population	Percentage of U.S. Population	Percentage of California Population
1900	250,187	0.3	16.9
1910	661,907	0.7	27.8
1920	1,193,705	1.1	34.8
1930	2,657,969	2.2	46.8
1940	3,312,460	2.5	48.0
1950	4,997,221	3.3	47.2
1960	7,823,721	4.4	49.8
1970	10,055,351	4.9	50.4
1980	11,589,678	5.1	49.0
1990	14,640,832	5.9	49.2
2000	16,516,006	5.9	48.8
2010	18,051,534	5.8	48.5
2012	18,322,197	5.8	48.1

SOURCE:

U.S. Census Bureau, Decennial Census. Accessed 29 June 2015. Website. Available at: <http://factfinder2.census.gov>

The population in the SCAG region increased by 2.0 million people between 2000 and 2014. This represents an increase of 12.3 percent (Table 3.14.2-3, *Population Growth in the SCAG Region for 2000 and 2014*). In descending order, Riverside County grew by 47.5 percent (734,580 persons), Imperial County grew by 26.9 percent (38,311 persons), San Bernardino County grew by 22.0 percent (376,235 persons), Ventura County grew by 11.9 percent (89,770 persons), Orange County grew by 9.4 percent (267,702 persons), and Los Angeles County grew by 5.5 percent (522,459 persons). Riverside County had the highest annual growth rate of 3.2 percent in the SCAG region. However, the rate of growth has decreased, bringing SCAG in alignment with rates of growth for the State of California and the United states (Table 3.14.2-4, *Average Annual Growth Rate of Population: 1850 to 2040*). During the 26th Annual SCAG-USC Demographic Workshop, data were presented to demonstrate that the population growth rate is decreasing (slowing down) due to five key factors: (1) lower birth rates (fewer children), (2) lower immigration rates (fewer immigrants), (3) aging population (fewer at childbearing age), (4) high housing costs (lack of housing), and (5) slow economic growth (lack of jobs).¹³

Households

Housing Characteristics

There were approximately 6.0 million households in the SCAG region in 2014 (Table 3.14.2-5, *2014 Housing Characteristics*). Los Angeles County accounts for over half of all households in the region.

**TABLE 3.14.2-5
2014 HOUSING CHARACTERISTICS**

County	Households	Median Household Income	Homeownership Rate
Imperial	49,766	\$39,039	56.1%
Los Angeles	3,268,347	\$53,125	47.5%
Orange	1,005,957	\$72,262	59.0%
Riverside	700,413	\$52,648	67.4%
San Bernardino	617,749	\$50,080	62.6%
Ventura	269,896	\$73,594	65.2%
SCAG region	6,029,326	\$56,737	54.5%

SOURCE:

Southern California Association of Governments. Accessed 11 September 2015. *Local Profiles of Imperial County, Los Angeles County, Orange County, Riverside County, San Bernardino County, and Ventura County*. Available at: <http://www.scag.ca.gov/DataAndTools/Pages/LocalProfiles.aspx>

Household Income

Median household income in the SCAG region varies widely, from \$39,039 in Imperial County to \$73,594 in Ventura County. The county with the second highest median income is Orange County (\$72,262). Across the SCAG region, the average median income is \$56,737. Homeownership rates also vary, from a low of 47.5 percent in Los Angeles County to a high of 67.4 percent in Riverside County. The average homeownership rate in the SCAG region is 54.5 percent (Table 3.14.2-5).

Poverty

Poverty levels in the SCAG region rose 69 percent between 1990 and 2012, with one in four children living in poverty.¹⁴ The U.S. Census Bureau reported 3.2 million people in the SCAG region were living in poverty in 2012 and 2013, up from 1.9 million in 1990 and from 2.8 million people in 2010 (Table 3.14.2-6, *Poverty Rates, 1990–2013*).¹⁵ That represents a 69 percent increase, roughly equivalent to three times the population. The average poverty rate in the SCAG region has remained above the state and national averages since 1990. Imperial County has the highest poverty rate, followed by San Bernardino County, Los Angeles County, and Riverside County, all of which are above the state and national averages. Orange County and Ventura County have consistently had poverty rates below state and national averages between 1990 and 2013. Using U.S. Census Bureau American Community Survey Data, SCAG has identified underserved communities in the SCAG region (Figure 3.14.2-1, *Environmental Justice Areas*) and disadvantaged communities in the SCAG region (Figure 3.14.2-2, *SB 535 Disadvantaged Communities in the SCAG Region* and Figure 3.14.2-3, *Environmental Justice Communities of Concern in the SCAG Region*).

The percentage of the population living in poverty in the SCAG region ranges from a low of 11 percent in Ventura County to a high of 23 percent in Imperial County (Table 3.14.2-7, *Percentage of the Population in the SCAG Region in Poverty—Individuals and Household*). The percentage of households living in poverty follows a comparable pattern with a low of 10 percent in Ventura County to a high of 25 percent in Imperial County. The data on poverty status of households were derived from answers to the income questions, as part of the outreach process undertaken by SCAG in preparation of the 2016 RTP/SCS. Since poverty is defined at the family level and not the household level, the poverty status of the household is determined by the poverty status of the householder. Households are classified as poor when the total income of the householder’s family is below the appropriate poverty threshold. The poverty thresholds vary depending on three criteria: size of family, number of related children, and, for one- and two-person families, age of householder. The Census Bureau uses a set of dollar value thresholds that vary by family size and composition to determine who is in poverty. If a family’s total income is less than the dollar value of the appropriate threshold, then that family and every individual in it are considered to be in poverty. Similarly, if an unrelated individual’s total income is less than the appropriate threshold, then that individual is considered to be in poverty.¹⁶

Household Size

Household size in the SCAG region increased slightly between 2000 and 2014, from 3.16 persons per household to 3.18 persons per household, or an increase of the equivalent of 0.02 persons per household (Table 3.14.2-8, *Household Size*). Average household size does not vary significantly from one county to another. In descending order, San Bernardino and Riverside Counties' household size grew, while Ventura, Orange, Imperial, and Los Angeles Counties' household size declined between 2000 and 2014.

“boom and bust” cycle. Much of the 2000s saw a boom of housing development, particularly in the Inland Empire, only to be followed by a bust starting in 2008 which affected employment, particularly in the housing construction and service sectors. As of 2013, there were approximately 8 million jobs in the SCAG region (Table 3.14.2-9, *2013 Employment by County—Incorporated Cities and Unincorporated Areas*). Based on the most recent available published data, the economy experienced a net increase in jobs, between 2000 and 2013, for three of the six counties in the SCAG region: Imperial, Orange, and Riverside (Table 3.14.2-10, *Employment Growth for 2000 to 2013*). The remaining counties in the SCAG region (Los Angeles, San Bernardino, and Ventura) all show a decline in jobs, as does the SCAG region as a whole. As of 2013, employment in Imperial County grew by 34.2 percent (15,854 jobs), employment in Orange County grew by 9.9 percent (141,630 jobs), and employment in Riverside County grew by 1.6 percent (10,236 jobs). The counties with the highest employment loss (in increasing order of percent of lost employment) are: Los Angeles County (1.2 percent loss), San Bernardino County (2.3 percent loss), and Ventura County (9.4 percent loss). Overall, the SCAG region gained approximately 37,089 jobs (or 0.5 percent) between 2000 and 2013.

Unemployment

Although unemployment rates declined between 2010 and 2014 for all counties in the SCAG region, rates of unemployment remain above 2000 unemployment rates in all counties (**Table 3.14.2-11, *Unemployment Rates***). The 2014 (the most recent full year data available) unemployment rates in the SCAG region are among the highest in the country, exceeding the national and state average (6.2 percent and 7.5 percent, respectively). In 2014, Imperial County had the highest unemployment rate in the SCAG region (almost 24 percent), while Orange County had the lowest in the SCAG region (5.5 percent, below the national average). In 2014, the average unemployment rate in the SCAG region was 10.7 percent. The U.S. Department of Labor and the State of California only report labor statistics by County.

**TABLE 3.14.2-11
UNEMPLOYMENT RATES**

County	2000 Unemployment Rate ¹	2010 Unemployment Rate ³	2014 Unemployment Rate ¹

3.14.3 THRESHOLDS OF SIGNIFICANCE

The potential for the 2016 RTP/SCS to result in impacts related to population and housing was analyzed in relation to the questions contained in Appendix G of the State CEQA Guidelines. The Plan would normally be considered to have a significant impact to population and housing if it would:

- Induce substantial population growth in an area, either directly (for example, by proposing new homes and businesses) or indirectly (for example, through extension of roads or other infrastructure).
- Displace substantial amounts of existing housing, necessitating the construction of replacement housing elsewhere.
- Displace substantial numbers of people, necessitating the construction of replacement housing elsewhere.

Methodology

The methodology for determining the significance of population, housing, and employment impacts compares the existing conditions to future (2040) conditions, as required in CEQA Section 15126.2(a). The CEQA Guidelines require “growth-inducing” impacts to be discussed. Such impacts occur when the proposed project could encourage economic or population growth, or remove obstacles to growth. Growth-inducing impacts include both changes in the amount and distribution of growth.

The 2016 RTP/SCS includes transportation projects and land use strategies to influence distribution patterns. These land use distribution patterns identify growth distribution and anticipated land use development to accommodate growth projections. The Regional Travel Demand Model (RTDM) used for this analysis captures pass-through traffic that does not have an origin or destination in the region, but does impact the region, so that too is included in the project analysis. Although a similar level of development is anticipated even without the Plan, the Plan would influence growth, including distribution patterns throughout the region, including targeting new growth in existing urbanized areas and high quality transit areas (HQTAs). To address this, the analysis in the PEIR covered overall impacts of transportation projects and anticipated land development patterns described in the 2016 RTP/SCS.

The 2016 RTP/SCS consists of a combination of vision, goals, guiding policies, performance measures, investments, and land use-transportation strategies (see **Section 2.0, *Project Description***). In addition, different growth patterns were developed for a range of feasible alternatives to the 2016 RTP/SCS (see **Chapter 4.0, *Alternatives***). Transportation projects in the 2016 RTP/SCS were reviewed to identify those that may involve right-of-way (ROW) acquisition and the potential for displacement of homes and businesses. These projects that might require acquisition of ROW were analyzed with a 500-foot buffer with a geographic information system (GIS) to generally identify locations within areas of residential land use that had the potential for large displacement of existing homes and businesses. **Table 3.14.3-1, *Potential Displacement of Existing Homes and Businesses (in Acres)***, shows the results of the analysis with the potential acreage of these affected areas by county.

The potential for community disruption was assessed by evaluating the location of major transportation projects in relation to surrounding land uses and community development. Highway and transit extensions and major interchange projects were assumed to have a higher potential to disrupt or divide existing communities since they would involve the creation of new roadways. Highway widening and other projects along established transportation rights-of-way were assumed to have a lower potential to divide or disrupt existing communities and neighborhoods.

The analysis is based on general descriptions of transportation projects listed in the Plan (see **Appendix B, *2016 RTP/SCS Project List***) and is regional and programmatic in nature.

**TABLE 3.14.3-1

3.14.4 IMPACT ANALYSIS

Implementation of the 2016 RTP/SCS would have a potential to influence the distribution of population, households, and employment. It is anticipated that significant impacts would include substantial induced population growth within urban areas that are adjacent to transit and new ROW acquisitions that could result in the displacement of a substantial number of existing businesses and homes, separation of residences from community facilities and services. While the 2016 RTP/SCS encourage growth in existing urbanized area, the proposed land use strategies would not accommodate all of the growth anticipated in the region. As exemplified in the PGF, some development would still be expected to occur in areas that would have the potential to convert open and natural land areas near the edge of existing urbanized areas to urban development.

Short-term construction-related impacts and long-term or permanent displacement, as well as off-site impacts from new facilities, would occur as a result of implementation of the 2016 RTP/SCS. Indirect impacts from the changes in population distribution expected to occur due to the 2016 RTP/SCS's transportation investments and land use policies are also identified.

IMPACT PHE-1: Potential to induce substantial population growth in an area, either directly (for example, by proposing new homes and businesses) or indirectly (for example, through extension of roads or other infrastructure).

Significant Impact

The 2016 RTP/SCS's land use strategies would accommodate new growth within existing urbanized areas, HQTAs, underutilized urban areas and existing suburban town centers. These areas have the potential to accommodate growth by integrating land use development patterns with transportation improvements that improve accessibility, increase mobility, and encourage the use of active transportation. However, these strategies might result in increased densities in some areas. Therefore, implementation of the 2016 RTP/SCS would have a potential to result in a significant impact requiring the consideration of mitigation measures.

As discussed in **Section 2.0, *Project Description***, as well as earlier in this section, the 2016 RTP/SCS PGF is based on local input with a distribution of growth within and around HQTAs and other minor modifications at a regional policy level. The PGF represents the projected increase and distribution of people that would occur in 2040 if the policies and investments included in the Plan were to be implemented. The total SCAG region population is expected to increase by approximately 3.8 million persons at the end of the 2016 RTP/SCS planning period (2040). The land use development pattern of the 2016 RTP/SCS assumes a significant increase in small-lot, single-family, and multi-family housing that is expected to mainly occur in infill locations near transit infrastructure within HQTAs, including livable corridors¹⁷ (Table 3.14.2-1) and neighborhood mobility areas.¹⁸ In some cases, anticipated land use patterns assume that more housing within HQTA and other mobility areas would be built than is currently anticipated in local general plans. However the shift in housing type from large-lot to small-lot single-family homes would likely occur naturally due to changes in the marketplace and as developers accommodating in response to this new demand. In 2012, 55 percent of total housing units were single-family units and 45 percent were multi-family units. The 2016 RTP/SCS projects that in 2040, 33 percent of new homes in the SCAG region will be single-family units and 67 percent multi-family units.¹⁹

Of the 1,521,000 new housing units expected in 2040, 14 percent are anticipated to be large-lot single-family units, 19 percent small-lot single-family units, 11 percent townhome units, and 56 percent multi-family units.²⁰ Government Code Section 65080(b)(2)(B)(ii) requires that the RTP/SCS must accommodate all the population of the region, including all economic segments of the population, over the course of the planning period of the regional transportation plan. In accordance with Government Code Section 65080(b)(2)(B)(ii), this projected housing mix would help the region accommodate the projected housing needs over the life of the 2016 RTP/SCS, especially housing at the lower income categories. SCAG is currently moving towards improving the current distribution of households by income category in the region through the RHNA. Mandated by State Housing Law as part of the periodic (every eight years) process of updating local housing elements of the General Plan, the RHNA

¹⁷ Most Livable Corridors would be located within HQTAs.

¹⁸ Neighborhood mobility areas are conducive to active transportation and include a "complete streets" approach to roadway improvements to encourage replacing single- and multi-occupant automobile use with biking, walking, skateboarding, neighborhood electric vehicles and senior mobility device.

¹⁹ SCAG modeling, 2015.

²⁰ SCAG modeling, 2015.

quantifies the need for housing within each jurisdiction during the planning periods. The most recent RHNA Allocation Plan, which covered the planning period from January 1, 2014 through October 1, 2021, was adopted by SCAG's governing body, Regional Council, in October 2012.²¹ The RHNA does not necessarily encourage or promote growth, but rather allows communities to anticipate growth. As such, communities may use the RHNA in land use planning; prioritizing local resource allocation; and in deciding how to address identified existing and future housing needs resulting from population, employment, and household growth.²²

The 2016 RTP/SCS land use development pattern would accommodate 46 percent of the region's future household growth and 50 percent of the future employment growth in HQTAs,²³ while keeping jurisdictional totals consistent with local input. It moves the region towards more compact, mixed-use development with a variety of housing types leading to more opportunities for walking and biking, more transit use, and shorter auto trips. As part of this regional transportation-planning process, SCAG has included an extensive public outreach effort with low-income and minority communities that is reflected in this 2016 RTP/SCS with the goal of providing an equitable distribution of benefits, including associated public health benefits, and not a disproportionate share of the burdens associated with the Plan. Additionally, the integrated transportation investments and land use strategies in the 2016 RTP/SCS would influence economic (jobs) and household growth in some areas such as the HQTAs, and could remove some obstacles to growth in other parts of the region. Specifically, improved accessibility and connectivity potentially gained from transportation investments in the Plan, the Plan could facilitate population and economic growth to areas of the region that are currently not developed or underdeveloped. Therefore, implementation of the Plan would have a potential to induce growth in some areas of the SCAG region, requiring the consideration of mitigation measures.

IMPACT PHE-2: Potential to displace substantial amounts of existing housing, necessitating the construction of replacement housing elsewhere.

Significant Impact

The construction of transportation projects that require the expansion of existing or designation of new ROWs have the potential to result in the displacement of existing housing, necessitating the construction of replacement housing, constituting a significant impact. In general, transportation projects included in the 2016 RTP/SCS would attempt to utilize existing ROWs to the maximum extent feasible. However, development of some highway, arterial, and transit projects included in the 2016 RTP/SCS would result in the disturbance and/or loss of residential and business uses. In particular, the 2016 RTP/SCS includes system expansion projects such as new freeway lane miles and new transit track miles that have the potential to result in the loss of land currently used for residential and business purposes. In past regional transportation plans, SCAG has envisioned a system of truck-only lanes extending from the San Pedro Bay Ports to downtown Los Angeles along the I-710, connecting to an

²¹ Southern California Association of Governments. Accessed 1 November 2015. *5th Cycle Regional Housing Needs Assessment Final Allocation, 1/1/2014-10/1-2021*. Available at: <http://www.scag.ca.gov/Documents/5thCyclePFinalRHNAplan.pdf>

²² Southern California Association of Governments. Accessed 1 November 2015. *RHNA & Housing*. Available at: www.scag.ca.gov/programs/Pages/Housing.aspx

²³ Southern California Association of Governments. 5 November 2015. *Item No. 1 Staff Report: 2016-2040 Regional Transportation Plan/Sustainable Communities Strategy (2016 RTP/SCS) – Proposed Major Components*. Available at: <http://www.scag.ca.gov/committees/CommitteeDocLibrary/jointRCPC110515fullagn.pdf>

east-west segment, and finally reaching the I-15 in San Bernardino County (the East-West Freight Corridor). Significant progress towards a regional freight corridor system has continued. As part of the 2016 RTP/SCS, SCAG includes a refined concept for the east-west corridor component of the system and connections to an initial segment of I-15.²⁴ After adoption of the 2016 RTP/SCS, it is anticipated that additional study of alignments will be conducted, including an alternatives analysis completed as part of a full environmental review at the subsequent project-level.

The East-West Freight Corridor would carry between 58,000 and 78,000 trucks per day.²⁵ These are trucks that would be removed from adjacent general-purpose lanes and local arterial roads. These facilities, depending on the alignment, potentially would traverse through lands currently used for residential and business purposes. The final alignment would likely be adjacent to or concurrent with existing alignments, so the adverse effects on displacing homes and businesses would be minimized. Additional goods movement projects included in the Plan such as grade separations also have the potential to displace homes or businesses as many of the areas where grade separations are proposed would be in developed urban areas.

Geographic information systems (GIS) was used to analyze where major freeway, rail, and transit projects, such as those described above, would intersect areas used for residential development and business uses. A 500-foot potential impact zone was drawn around the freeway, rail and transit projects in the 2016 RTP/SCS to compute the number of acres that could potentially be affected by the construction and operation of major transportation projects in the Plan. **Table 3.11.3-1, *Land Uses Located within 500 Feet of the Plan's Major Transportation Projects***, in Section 3.11, ***Land Use and Planning***, shows the current land uses that are located within 500 feet of either side of the Plan's major transportation projects.²⁶

As indicated in **Table 3.11.3-1**, many types of land uses would be impacted by the Plan's transportation projects including residential. In total, the 2016 RTP/SCS includes approximately over 78,800 lane miles including freeways, toll roads, major and minor arterials, collectors, high-occupancy toll (HOT), and high-occupancy vehicle (HOV) lanes.²⁷ These additional transportation facilities could displace homes and businesses in the region, constituting a significant impact requiring the consideration of mitigation measures.

Additionally, as previously analyzed, land use strategies included in the 2016 RTP/SCS would have a potential to displace substantial amounts of existing housing, necessitating the construction or replacement housing elsewhere. While this PEIR analyzes land use impacts on the communities at a regional level, it is possible that certain communities may be affected by the growth and land use strategies associated with the 2016 RTP/SCS, as well as potential displacement of substantial amounts of existing housing and construction or replacement housing elsewhere. The Plan includes land use

²⁴ Southern California Association of Governments. December 2015. *2016-2040 Regional Transportation Plan/Sustainable Communities Strategy*. Los Angeles, CA.

²⁵ Southern California Association of Governments. December 2015. *2016-2040 Regional Transportation Plan/Sustainable Communities Strategy: Goods Movement Appendix*. Los Angeles, CA.

²⁶ Major Transportation Projects include but are not limited to projects that involve ground disturbing activities and projects outside of existing rights-of-way such as projects that require new rights-of-way, adding traffic lanes, and grade separation.

²⁷ Southern California Association of Governments. December 2015. *2016-2040 Regional Transportation Plan/Sustainable Communities Strategy: Highways & Arterials Appendix*. Los Angeles, CA.

strategies that would target the region's growth in the next 25 years in HQTAs, existing suburban town centers, and more walkable, mixed-use communities. Supported by other public amenities and transit services, housing in these areas tends to command higher premiums and may be attractive to more affluent residents and unaffordable to current residents in these areas. Therefore, substantial amounts of existing housing for current residents in some communities in the region may be replaced. However, this analysis should be viewed together with the proposed land use strategies to accommodate 47 percent of the region's future household growth in HQTAs.²⁸

As the region's population is increasingly using transit and showing more interest in living and working in areas with active transportation opportunities or other transit-rich neighborhood and communities, it is anticipated that changes could occur in existing communities. As such, the potential for "gentrification," or the displacement of lower-income residents, could occur if new development brings higher-income residents into a neighborhood. Neighborhood residents in areas of low income and/or enclaves of marginalized minorities may not benefit from planned transit investment, stations, and other amenities (e.g., walkways and bikeways) that come with this new neighborhood revitalization. More affluent and less diverse residents have the potential to displace them because new development near transit areas could be popular and unaffordable. Hence, the potential to either indirectly or directly induce substantial population growth and displace a community in such an area could occur.

Despite the proposed land use strategies that could influence more housing developments in urbanized areas, the Plan would have the potential to displace substantial amounts of existing housing, necessitating the construction or replacement housing elsewhere, requiring the consideration of mitigation measures.

IMPACT PHE-3: Potential to displace substantial numbers of people, necessitating the construction of replacement housing elsewhere.

Significant Impact

As indicated in Table 3.11.3-1 and discussed above, all types of land uses, including residential uses, would be affected by Plan projects, resulting in the potential to displace substantial numbers of people, necessitating the construction of replacement housing elsewhere, constituting a significant impact. Additional residential land uses would be affected by the growth associated with the 2016 RTP/SCS. Displacement of affordable housing in some areas in the region could occur, and this could have an impact on communities as these types of units may not be replaced by affordable housing in the same areas. Therefore, the Plan would have the potential to displace substantial numbers of people, necessitating the construction of replacement housing elsewhere, constituting a potentially significant impact requiring the consideration of mitigation measures.

²⁸ Southern California Association of Governments. 5 November 2015. *Item No. 1 Staff Report: 2016-2040 Regional Transportation Plan/Sustainable Communities Strategy (2016 RTP/SCS) – Proposed Major Components*. Available at: <http://www.scag.ca.gov/committees/CommitteeDocLibrary/jointRCPC110515fullagn.pdf>

3.14.5 CUMULATIVE IMPACTS

IMPACT PHE-1: Potential to induce substantial population growth in an area, either directly (for example, by proposing new homes and businesses) or indirectly (for example, through extension of roads or other infrastructure).

Significant Cumulative Impact

Implementation of the transportation projects included in the 2016 RTP/SCS, when taken into consideration with related development and infrastructure projects within the SCAG region and surrounding areas, would have the potential to result in an increase in land use density and development over the next 25 years. When considered in combination with other land use changes and infrastructure development in the SCAG region and surrounding counties, the Plan would have the potential to influence substantial population growth in the SCAG region and in areas near the SCAG region, thus constituting a significant cumulative impact with regard to the potential for inducing substantial population growth in an area, either directly or indirectly.

IMPACT PHE-2: Potential to displace substantial amounts of existing housing, necessitating the construction of replacement housing elsewhere.

Significant Cumulative Impact

Although the 2016 RTP/SCS includes a set of regional land use strategies that are intended to guide future land development patterns to focus new growth in HQTAs, existing suburban town centers, and walkable mixed-use communities, population growth will take place regardless of whether the transportation projects included in the 2016 RTP/SCS are implemented. By 2040, the SCAG region is anticipated to add an additional 3.8 million people regardless of the 2016 RTP/SCS. Improved mobility and accessibility from implementation of the Plan's transportation investments and strategies, integrated with land use strategies, could result in a population increase in areas within and beyond the SCAG region. Therefore, the Plan would result in significant cumulative impacts with regard to the potential for inducing substantial population growth in an area, either directly or indirectly, requiring the consideration of mitigation measures.

IMPACT PHE-3: Potential to displace substantial numbers of people, necessitating the construction of replacement housing elsewhere.

Significant Cumulative Impact

Implementation of the Plan would also have the potential to displace substantial amounts of existing housing and substantial numbers of people, necessitating the construction of replacement housing elsewhere, including outside the region. The construction of transportation projects that require the expansion of existing or designation of new ROWs have the potential, when considered in combination with other land use changes and infrastructure development in the SCAG region and surrounding counties, to result in the displacement of existing housing, necessitating the construction of

replacement housing. These factors may cause people to move outside the region for both housing and/or employment needs. As indicated in the Table 3.11.3-1 and discussed above, all types of land uses, including residential uses, would be impacted by Plan projects. Therefore, the Plan would result in significant cumulative impacts with regard to the potential to displace substantial amounts of existing housing, necessitating the construction of replacement housing elsewhere, requiring the consideration of mitigation measures.

3.14.6 MITIGATION MEASURES

Mitigation measures as they pertain to each CEQA question related to population, housing, and employment are described below. Mitigation measures are categorized into two categories: SCAG mitigation and project-level mitigation measures. SCAG mitigation measures shall be implemented by SCAG over the lifetime of the 2016 RTP/SCS. Project-level mitigation measures can and should be implemented by Lead Agencies for transportation and development projects, as applicable and feasible.

IMPACT PHE-1: Potential to induce substantial population growth in an area, either directly (for example, by proposing new homes and businesses) or indirectly (for example, through extension of roads or other infrastructure).

SCAG Mitigation Measures

SCAG has no control over the amount of growth the region would experience during the implementation of the 2016 RTP/SCS. The regional growth and land use change forecasted in the 2016 RTP/SCS would be implemented by local jurisdictions through local plans and individual development projects. The 2016 RTP/SCS has been developed to accommodate forecasted regional growth, and failing to do so would be inconsistent with the applicable federal and state requirements for RTPs. In addition, precluding growth would conflict with the requirements to provide sufficient housing for the region's population contained in SB 375. As discussed above, Government Code Section 65080(b)(2)(B)(ii) requires that the RTP/SCS must accommodate all the population of the region, including all economic segments of the population, over the course of the planning period of the regional transportation plan. In order to avoid impacts from inducing substantial population growth in an area either directly or indirectly, SCAG shall implement the following mitigation measures:

MM-LU-1(a)(1) through MM-LU-1(a)(8).

MM-PHE-1(a)(1): SCAG shall work with local agencies to encourage and assist in implementation of growth strategies to create an urban form designed to focus development in HQTAs in accordance with the policies, strategies, and investments contained in the 2016 RTP/SCS, enhancing mobility and reducing land consumption.

MM-PHE-1(a)(2): SCAG's Sustainability Program shall be used to coordinate and provide information and resources to local agencies relating to changes in land use to accommodate future population growth while maintaining the quality of life in the region.

Project-Level Implementation Measures

MM-LU-1(b).

IMPACT PHE-2: Potential to displace substantial amounts of existing housing, necessitating the construction of replacement housing elsewhere.

SCAG Mitigation Measures

MM-PHE-2(a)(1): SCAG's Sustainability Program shall be used to build consensus in the region relating to changes in land use to accommodate future population growth while maintaining the quality of life in the region.

MM-PHE-2(a)(2): SCAG shall work with neighboring planning agencies and MPOs to ensure that plans and strategies can accommodate future population growth beyond SCAG's borders.

Project-Level Implementation Measures

MM-PHE-2(b). Consistent with the provisions of Section 15091 of the State CEQA Guidelines, SCAG has identified mitigation measures capable of avoiding or reducing the significant effects related to displacement that are within the jurisdiction and responsibility of Lead Agencies. Where the Lead Agency has identified that a project has the potential for significant effects, the Lead Agency can and should consider mitigation measures to minimize the displacement of existing housing and people and to ensure compliance with local jurisdiction's housing elements of their general plans, as applicable and feasible. Such measures may include the following, or other comparable measures identified by the Lead Agency:

- Evaluate alternate route alignments and transportation facilities that minimize the displacement of homes and businesses. Use an iterative design and impact analysis where impacts to homes or businesses are involved to minimize the potential of impacts on housing and displacement of people.
- Prioritize the use existing ROWs, wherever feasible.
- Develop a construction schedule that minimizes potential neighborhood deterioration from protracted waiting periods between right-of-way acquisition and construction.

IMPACT PHE-3: Potential to displace substantial numbers of people, necessitating the construction of replacement housing elsewhere.

SCAG Mitigation Measures

MM-PHE-2(a)(1) and MM-PHE-2(a)(2).

Project-Level Implementation Measures

MM-PHE-2(b).

3.14.7 LEVEL OF SIGNIFICANCE AFTER MITIGATION

IMPACT PHE-1: Potential to induce substantial population growth in an area, either directly (for example, by proposing new homes and businesses) or indirectly (for example, through extension of roads or other infrastructure).

Implementation of mitigation measures MM-LU-1(a)(1) through MM-LU-1(a)(8), MM-PHE-1(a)(1) and MM-PHE-1(a)(2), and MM-PHE-1(b) would reduce impacts related to inducing substantial increases in population under the 2016 RTP/SCS. However, direct, indirect, and cumulative impacts would remain significant and unavoidable.

IMPACT PHE-2: Potential to displace substantial amounts of existing housing, necessitating the construction of replacement housing elsewhere.

Implementation of Mitigation Measures MM PHE-2(a)(1), MM PHE-2(a)(2), and MM-PHE-2(b) would reduce potential impacts related to the displacement of existing housing. However, not all of the projects included in the 2016 RTP/SCS would be constructed in existing ROWs. As a result, a substantial amount of existing housing would likely be displaced due to development associated with projects in the 2016 RTP/SCS. Therefore, direct, indirect, and cumulative impacts would remain significant and unavoidable.

IMPACT PHE-3: Potential to displace substantial numbers of people, necessitating the construction of replacement housing elsewhere.

Implementation of Mitigation Measures MM-PHE-2(a)(1), MM-PHE-2(a)(2), and MM-PHE-2(b) would reduce potential impacts related to displacement of substantial numbers of people requiring the construction of replacement housing elsewhere. However, not all of the projects included in the 2016 RTP/SCS would be constructed in existing ROWs. A substantial number of people would likely be displaced due to development associated with projects in the 2016 RTP/SCS. Therefore, direct, indirect, and cumulative impact would remain significant and unavoidable.

3.15 PUBLIC SERVICES

This section of the Program Environmental Impact Report (PEIR) describes the public services in the Southern California Association of Governments (SCAG) region, discusses the potential impacts of the proposed 2016 Regional Transportation Plan/Sustainable Communities Strategy (“2016 RTP/SCS,” “Plan,” or “Project”) on public services, identifies mitigation measures for the impacts, and evaluates the residual impacts. Public services were evaluated in accordance with Appendix G of the 2015 State California Environmental Quality Act (CEQA) Guidelines. Public services within the SCAG region were evaluated at a programmatic level of detail in relation to the general plans of the six counties and the 191 cities within the SCAG region, a review of related literature germane to the SCAG region, as well as a review of SCAG’s 2012 RTP/SCS PEIR.¹

Southern California is home to significant natural disasters, including earthquakes, wildfires, flooding, and mudslides. Although natural disasters, such as earthquakes and hurricanes, have produced significant regional casualties and property damage, none had the serious disruption to national travel and the national economy as the September 11, 2001, terrorist attacks. The 9/11 attacks created a new awareness of the vulnerabilities of transportation fleets and facilities. As concern about the threat of terrorism and consequences of natural disasters has grown, government (at all levels) has taken new measures to secure the welfare of its citizens. Transportation and transit agencies throughout the United States are taking increasing steps to protect their facilities against the threats of crime, terrorist activity, and natural disasters. The complexity of the SCAG region, with a range of potential terrorism targets, presents significant challenges in coordinating and implementing effective homeland security programs. The unexpected and complex nature of these natural and human-caused incidents require extensive coordination, collaboration, and flexibility among all of the agencies and organizations involved in planning, mitigation, response, and recovery.

The provision of public services in the SCAG region is accomplished through cooperation among a range of federal, state, regional, and local government agencies and nongovernmental organizations. Given the focus of the RTP/SCS on transportation planning and sustainable community strategies, the evaluation of public services focuses here emergency preparedness, emergency response, and security related to major modes of travel and protection and support of the communities in the SCAG region. The Governor’s Office of Emergency Services (CalOES) is responsible for overall state agency response to disasters and ensuring the state’s readiness to respond to and recover from all hazards and to assist local governments in their emergency response preparedness, response, recovery, and mitigation. The provision of emergency preparedness, emergency response services is provided through federal, state, and local entities including the Transportation Security Administration (TSA), the Department of Homeland Security (DHS), Federal Emergency Management Agency (FEMA), the California Department of Forestry and Fire Protection (CAL FIRE), the California Highway Patrol (CHP), and County and City fire, emergency response, and security departments. Although the RTP/SCS does not include planning guidelines related to provision of schools, it does consider the relationship of transportation projects and goods movement in relation to schools; therefore this analysis describes the key regulations related to funding and siting of schools, and characterizes the distribution of schools in the SCAG region.

¹ Southern California Association of Governments. April 2012. *Final Program Environmental Report: 2012-2035 Regional Transportation Plan/Sustainable Communities Strategy*. Available at: <http://rtppscs.scag.ca.gov/Pages/Final-2012-PEIR.aspx>

Definitions

California Department of Forestry and Fire Protection (CAL FIRE): CAL FIRE is an emergency response and resource protection department that protects lives, property, and natural resources from fire; responds to emergencies of all types, and protects and preserves timberlands, wildlands, and urban forests throughout the State of California, through cooperative efforts via contracts and agreements between state, federal, and local agencies to respond to emergencies including wildland and structure fires, earthquakes, floods, hazardous material spills, medical aids, and terrorist attacks.²

California Emergency Management Agency (EMA): The EMA was established as part of the Governor's Office in 1950 as the State Office of Civil Defense. Then called the Governor's Office of Emergency Services, it coordinated overall state agency response to major disasters in support of local government. The EMA is responsible for assuring the state's readiness to respond to and recover from natural, human-made, and war-caused emergencies, and for assisting local governments in their emergency preparedness, response, and recovery efforts. The EMA serves as the central contact point in the state for any emergency or imminent disaster. It coordinates the notification of appropriate state administering agencies that may be required to respond, as well as the emergency activities of all state agencies in the event of an emergency. In doing so, the EMA does not focus on security specifically, but rather more broadly on addressing all potential incidents that could impact the state, such as earthquakes, fires, floods, and terrorist attacks. Furthermore, EMA coordinates with federal agencies, such as the DHS and FEMA, as well as other state and local agencies such as the CHP. California's vision, mission, and principles for emergency management, as well as goals and objectives are located in its publication "Strategic Plan 2010-2015 – Keeping California Safe."³

California Highway Patrol (CHP): The CHP was created in 1929 to provide uniform traffic law enforcement throughout the state.⁴ The primary purpose of the CHP is to assure the safe, convenient, and efficient transportation of people and goods on the state's highway system in accordance with CHP's mission to provide the highest level of safety, service, and security.

County Offices of Emergency Services (OES): The County OESs provide emergency management and preparedness services to the unincorporated areas of the six counties within the SCAG region. Each OES is responsible for alerting and notifying appropriate agencies when disaster strikes, coordinating all agencies that respond, ensuring resources are available and mobilized in times of disaster, developing plans and procedures for response to and recovery from disasters, and developing and providing preparedness materials for the public. These responders include fire departments, police and sheriff department, hospitals, ambulance services, and transportation agencies. Coordination among public and private agencies within various cities and counties make the most use of all available resources in the event of any emergency. While each city and county has its own security procedures, the policies are generally similar. Mutual Aid agreements between cities, counties, and private organizations help to maximize resources and reduce the human suffering associated with disaster situations.

² California Department of Forestry and Fire Protection (CAL FIRE). Accessed 21 September 2015. *What is CAL FIRE?* Available at: http://www.calfire.ca.gov/communications/downloads/fact_sheets/WhatisCALFIRE.pdf

³ California Emergency Management Agency. Accessed 21 September 2015. *Strategic Plan 2010-2015 – Keeping California Safe*. Available at: http://www.battle-creek.net/docs/fire/CalEMA_StrategicPlan_2010.pdf

⁴ State of California. Accessed 18 September 2015. *About Us: Welcome to the California Highway Patrol*. Available at: <https://www.chp.ca.gov/home/about-us>

Federal Emergency Management Agency (FEMA): FEMA is a federal agency that has served America since 1979 to support U.S. citizens and first responders to ensure that the nation works together to build, sustain, and improve its capacity to prepare for, protect against, respond to, recover from, and mitigate all hazards.⁵ FEMA coordinates the federal government's role in preparing for, preventing, mitigating the effects of, responding to, and recovering from all domestic disasters, whether natural or man-made, including acts of terror. FEMA is part of the DHS.

Governor's Office of Emergency Services (CalOES): CalOES is the state agency charged with the responsibility to assist local government in preparing for and responding to any type of natural or manmade disaster in California. CalOES protects the lives and property, build capabilities, and supports communities for a resilient California. CalOES has six goals relevant to public services: (1) anticipate and enhance prevention and detection capabilities to protect the state from all hazards and threats; (2) strengthen California's ability to plan, prepare for, and provide resources to mitigate the impacts of disasters, emergencies, crimes, and terrorist events; (3) effectively respond to and recover from both human-caused and natural disasters; (4) enhance the administration and delivery of all state and federal funding, and maintain fiscal and program integrity; (5) develop a united and innovative workforce that is trained, experienced, knowledgeable, and ready to adapt and respond; and (6) strengthen capabilities in public safety communication services and technology enhancements.

Master Mutual Aid Agreements: FEMA has encouraged federal, state, local, and tribal governments to enter into agreements to assist one another.

Mutual Aid Agreements (MAA): Immediately following the 1994 Northridge earthquake, city and county emergency managers in the CalOES coastal, southern, and inland regions developed a coordinated emergency management concept called the Emergency Managers Mutual Aid (EMMA) system. The purpose of EMMA is to support disaster operations in affected jurisdictions by providing professional emergency management personnel from unaffected areas to support local jurisdictions, Operational Areas, and regional emergency operations during proclaimed emergencies; providing a system, including an organization, information, and forms necessary to coordinate the formal request, reception, assignment, and training of assigned personnel; establishing a structure to maintain this document (the Emergency Managers Mutual Aid Plan) and its procedures; providing for the coordination of training for emergency managers, including Standardized Emergency Management System (SEMS/NIMS) training, emergency management course work, exercises, and disaster response procedures; and promoting professionalism in emergency management.

National Incident Management System/Standardized Emergency Management System (NIMS): The NIMS is a tool for states, counties and local jurisdictions to respond to catastrophic events through better communication and coordination. NIMS provides a consistent nationwide template to enable Federal, state, local, and tribal governments and private sector and nongovernmental organizations to work together effectively and efficiently to prepare for, prevent, respond to, and recover from domestic incidents, regardless of cause, size, or complexity, including acts of catastrophic terrorism.

National Preparedness System (NPS): The NPS, also a part of FEMA, is a part of NIM. The NPS is intended to be used by individuals, families, communities, the private and nonprofit sectors, faith-based

⁵ Federal Emergency Management Agency. Accessed 18 September 2015. *About the Agency*. Available at: <http://www.fema.gov/about-agency>

organizations, and local, state, tribal, territorial, insular area, and federal governments to achieve the National Preparedness Goal.

Transportation Management Centers (TMCs): The California Department of Transportation (Caltrans), in conjunction with the CHP, has created TMCs to rapidly detect and respond to incidents while managing the resulting congestion. For the SCAG region, Caltrans Districts 7, 8, 11, and 12 all have TMCs.

Security: the protection of persons or property from intentional damage or destruction caused by vandalism, criminal activity or terrorist attacks.

Transportation Security Administration (TSA): The TSA is a component of the DHS and is responsible for security of the nation's transportation systems. The TSA is responsible for security at airports in the SCAG region. With state, local, and regional partners, the TSA oversees security for highways, railroads, buses, mass transit systems, and ports. A vast majority of its resources are dedicated to aviation security and is primarily tasked with screening passengers and baggage.

Unified Coordination Group (UCG): Unified Coordination Group (UCG) is a temporary Federal multi-agency coordination center established locally to facilitate field-level domestic incident management activities related to prevention, preparedness, response and recovery when activated by the Secretary of Homeland Security. The JFO provides a central location for coordination of federal, state, local, tribal, nongovernmental and private-sector organizations with primary responsibility for activities associated with threat response and incident support.

United States Coast Guard: The Coast Guard is both a federal law enforcement agency and a military force that operates as part of the DHS in times of peace to enforce the nation's laws at sea, protecting the marine environment, guarding the nation's vast coastlines and ports, and performing vital lifesaving missions. In times of war, or at the direction of the president, the Coast Guard serves as part of the Navy Department, defending the nation against terrorism and foreign threats. Since September 2001, the United States Coast Guard has assumed a dynamic role in protecting major ports. In addition, over 3,500 volunteer Coast Guard Auxiliary members assist in many Coast Guard mission areas, including Boating Safety and Search and Rescue.

United States Department of Defense (DOD): In the case of a large-scale emergency, the DOD is authorized to provide resources when response and recovery requirements are beyond the capabilities of civilian authorities and these efforts do not interfere with the DOD's core mission or ability to respond to operational contingencies. Requests for Defense Support to Civilian Authorities (DSCA) are made through the local, county, and state authorities as a request for assistance to the federal coordinating official in the appropriate lead federal agency and is normally accompanied by, or submitted after a request from the governor for a disaster declaration from the president. The California National Guard may be activated as part of the DSCA and can provide law enforcement support, crisis management, and consequence management services. Activation of the National Guard for local support during emergencies is done by the governor via CalOES.

United States Department of Homeland Security (DHS): The DHS was established after the September 11, 2001, terrorist attacks as an office to oversee and coordinate a comprehensive national strategy to

safeguard the country against terrorism and respond to any future attacks.⁶ In 2003, DHS formally became a Cabinet-level department to further coordinate and unify national homeland security efforts. The vision of DHS is to ensure a homeland that is safe, secure, and resilient against terrorism and other hazards.

3.15.1 REGULATORY FRAMEWORK

The federal government sets public service standards for transportation-related security services and educational services that are closely linked to interstate commerce, such as aircraft, locomotives, and trucks. The state sets public service standards for fire response, police protection, public education, and security services. The provision of new public service facilities associated with population growth and development projects are generally subject to local general plan policies.

Federal

Tariff Act of 1790

The Tariff Act of 1790 was signed by President George Washington on August 10, 1790, to authorize the construction of 10 vessels (the Revenue Cutter Service) to enforce federal tariff and trade laws and to prevent smuggling.^{7,8} In 1915, the Revenue Cutter Service merged with the U.S. Life-Saving Service, and was officially renamed the U.S. Coast Guard, the only maritime service dedicated to saving life at sea and enforcing the nation's maritime laws. In the 1900s, the Coast Guard also became responsible for maritime navigation, merchant marine licensing, and merchant vessel safety. In 2003, the Coast Guard was transferred to the Department of Homeland Security, where it currently serves.

Aviation and Transportation Security Act

The Aviation and Transportation Security Act (Public Law 107-71) was passed by the 107th Congress and signed on November 19, 2001, to establish the TSA in order to prevent terrorist acts associated with transportation systems after the September 11, 2001, terrorist attacks.⁹ The TSA is a component of the DHS and is responsible for security of the nation's transportation systems. With state, local, and regional partners, the TSA oversees security for highways, railroads, buses, mass transit systems, and ports. A vast majority of its resources are dedicated to aviation security and is primarily tasked with screening passengers and baggage.

Elementary and Secondary Education Act of 1965 and No Child Left Behind Act of 2001

Since the Elementary and Secondary Education Act (ESEA) of 1965 (Public Law 89-10) was signed into law by President Lyndon B. Johnson, local school districts throughout the nation have received federal monies through grants to state educational agencies to improve the quality of elementary and secondary education. ESEA also offered new grants to districts serving low-income students and for text and library books, created special education centers, and created scholarships for low-income collect students. In 2002, Congress reauthorized ESEA and President George W. Bush signed the law under a new name: No Child Left Behind (NCLB), which put in place measures that exposed achievement gaps among traditionally underserved and vulnerable students and their peers, and started an important national dialogue on educational improvement. As with ESEA, NCLB requires local school districts that have received federal funding to meet federal requirements and receive oversight.

Homeland Security Act of 2002

The DHS was established on November 25, 2002, by the Homeland Security Act of 2002 (6 U.S. Code [USC] 101). The DHS is charged with the responsibility of protecting the territory of the United States from terrorist attacks and responding to natural disasters. The primary mission of the Department is to (1) prevent terrorist attacks within the United States; (2) reduce the vulnerability of the United States to terrorism; and (3) minimize the damage, and assist in the recovery, from terrorist attacks that do occur within the United States. There are five homeland security missions:¹⁰

1. Prevent terrorism and enhancing security
2. Secure and manage borders
3. Enforce and administer immigration laws
4. Safeguard and secure cyberspace
5. Ensure resilience to disasters

Executive Order 12127 – Federal Emergency Management Agency

On April 1, 1979, President Jimmy Carter signed Executive Order 12127 to create FEMA, a federal agency committed to protecting and serving the American people pursuant to its mission to support our citizens and first responders to ensure that as a nation we work together to build, sustain and improve our capability to prepare for, protect against, respond to, recover from and mitigate all hazards.¹¹ In March 2003, FEMA became a department of the DHS. The primary mission of FEMA is to reduce the loss of life and property and protect the nation from all hazards, including natural disasters, acts of terrorism, and other human-made disasters, by leading and supporting the nation in a risk-based, comprehensive emergency management system of preparedness, protection, response, recovery, and mitigation. FEMA has five mission areas. These have been identified in the National Preparedness Goal, released in September 2011. The National Preparedness Goal states: “A secure and resilient nation with the

¹⁰ U.S. Department of Homeland Security. Accessed 18 September 2015. *Our Mission*. Available at: <http://www.dhs.gov/our-mission>

¹¹ Federal Emergency Management Agency. Accessed 11 September 2015. *FEMA: About the Agency*. Available at: <http://www.fema.gov/about-agency>

capabilities required across the whole community to prevent, protect against, mitigate, respond to, and recover from the threats and hazards that pose the greatest risk.”

These risks include events such as natural disasters, disease pandemics, chemical spills and other manmade hazards, terrorist attacks and cyber-attacks.

FEMA’s five mission areas are as follows:

- **Prevention.** Prevent, avoid or stop an imminent, threatened or actual act of terrorism.
- **Protection.** Protect our citizens, residents, visitors, and assets against the greatest threats and hazards in a manner that allows our interests, aspirations, and way of life to thrive.
- **Mitigation.** Reduce the loss of life and property by lessening the impact of future disasters.
- **Response.** Respond quickly to save lives, protect property and the environment, and meet basic human needs in the aftermath of a catastrophic incident.
- **Recovery.** Recover through a focus on the timely restoration, strengthening and revitalization of infrastructure, housing and a sustainable economy, as well as the health, social, cultural, historic and environmental fabric of communities affected by a catastrophic incident.

The NIMS is administered under FEMA. The NIMS is a tool for states, counties, and local jurisdictions to respond to catastrophic events through better communication and coordination. NIMS provides a consistent nationwide template to enable federal, state, local, and tribal governments and private sector and nongovernmental organizations to work together effectively and efficiently to prepare for, prevent, respond to, and recover from domestic incidents, regardless of cause, size, or complexity, including acts of catastrophic terrorism.

California has a similar management system called the Standard Emergency Management System (SEMS) which is mandated under California Government Code Section §8607(a). State of California Executive Order S205 requires the state to integrate, to the extent appropriate, the NIMS, into the state’s SEMS.

National Response Framework (Presidential Policy Directive 8: National Preparedness (PPD-8, NRF)

The National Response Framework (NRF) is an essential component of the National Preparedness System mandated in Presidential Policy Directive 8: National Preparedness (PPD-8).¹² PPD-8 is aimed at strengthening the security and resilience of the United States through systematic preparation for the threats that pose the greatest risk to the security of the Nation. PPD-8 defines five mission areas—Prevention, Protection, Mitigation, Response, and Recovery—and mandates the development of a series of policy and planning documents to explain and guide the Nation’s collective approach to ensuring and enhancing national preparedness. The NRF presents the guiding principles that enable all response partners to prepare for and provide a unified national response to disasters and emergencies. It

¹² U.S. Department of Homeland Security. May 2013. *National Response Framework*. Available at: http://www.fema.gov/media-library-data/20130726-1914-25045-1246/final_national_response_framework_20130501.pdf

establishes a comprehensive, national, all-hazards approach to domestic incident response. The National Response Plan was replaced by the NRF effective March 22, 2008 and updated in May 2013. The NRF defines the principles, roles, and structures that organize how we respond as a nation. The NRF:

- Describes how communities, tribes, states, the federal government, private-sectors, and nongovernmental partners work together to coordinate national response;
- Describes specific authorities and best practices for managing incidents; and
- Builds upon the NIMS, which provides a consistent template for managing incidents.

State

California Education Code

School facilities and services are subject to the rules and regulations of the California Education Code and governance of the State Board of Education (SBE). The SBE is the 11-member governing and policy making body of the California Department of Education (CDE) that sets K–12 education policy in the areas of standards, instructional materials, assessment, and accountability. The CDE and the State Superintendent of Public Instruction are responsible for enforcing education law and regulations; and for continuing to reform and improve public elementary school, secondary school, and child care programs, as well as adult education and some preschool programs. The CDE's mission is to provide leadership, assistance, oversight, and resources so that every Californian has access to an education that meets world-class standards.¹³ The core purpose of the CDE is to lead and support the continuous improvement of student achievement, with a specific focus on closing achievement gaps.¹⁴

Community Facilities Act of 1982, as amended

The Community Facilities Act of 1982 (Section 53324 of the Government Code), also commonly known as the Mello-Roos Act, enables certain public agencies to designate a Mello-Roos Community Facilities District, which allows for the financing of public improvements and services. These include basic infrastructure, police protection, fire protection, ambulance services, schools, parks, libraries, museums, and other cultural facilities. Mello-Roos Community Facilities Districts are usually created to finance improvements and services when no other funding sources are available, and require a two-thirds majority vote of residents living within the proposed boundaries. They are used especially often (but not exclusively) in new development areas. Upon approval, a special tax lien is placed against each property in the district, and residents pay a special tax each year. This tax is not based on property value, but on formulas that take into account physical characteristics such as square footage and structure size.¹⁵

California Government Code Section 65995

California Government Code Section 65995 is found in Title 7, Chapter 4.9. California Government Code Section 65995 authorizes school districts to collect impact fees from developers of new residential and commercial/industrial building space. In 1998, the California legislature passed Senate Bill (SB) 50, that amended Government Code Section 65995 in 1998. Under the provisions of SB 50, schools can collect fees to offset costs associated with increasing school capacity as a result of development. The development associated with the Plan would be subject to applicable fees determined by the local school districts per California Government Code Section 65995. The local school districts determine fees in accordance with California Government Code Section 65995, which can be adjusted every two years. The California Government Code establishes three types of school fees for developers, which are commonly referred to as the Level 1, Level 2 and Level 3 Fees.

Level 1 Fee. The Level 1 Fee is assessed if the school district can establish a reasonable relationship between the new development and the assessment of fees required to pay for facilities needed to accommodate future students (Section 66001).

Level 2 Fee. If state funding is available, the Level 2 Fee is assessed if a school district (i) makes a timely application to the State Allocation Board (“SAB”) for new construction funding, (ii) conducts a School Facility Needs Analysis, and (iii) satisfies at least two of the four requirements set forth in Section 65995.5(b)(3) (*e.g.*, district has “substantial enrollment” or has reached maximum bonding capacity) (Section 65995.5).

Level 3 Fee. If state funding is no longer available, the Level 3 Fee can be assessed, thereby allowing a school district to impose a developer fee up to 100 percent of the School Facility Program new construction project costs (Section 65995.7).

Leroy F. Green School Facilities Act of 1998

The Leroy F. Greene School Facilities Act of 1998 (Chapter 12.5 of the Education Code), was signed into law on August 27, 1998. It placed a \$9.2 billion state bond measure (Proposition 1A), which included grants for modernization of existing schools and construction of new schools, on ballot at the November 3, 1998, election. Under SB 50, a program for funding school facilities largely based on matching funds was created. Its construction grant provides funding on a 50/50 state and local match basis, while its modernization grant provides funding on a 60/40 basis. Districts that are unable to provide some, or all, of the local match requirement and area able to meet the financial hardship provisions may be eligible for additional state funding.¹⁶ In addition, SB 50 allows governing boards of school districts to establish fees to offset costs associated with school facilities made necessary by new construction. Pursuant to Government Code Section 65995, the payment of these fees by a developer serves to fully mitigate all potential project impacts on school facilities from implementation of a project to less than significant levels.

California Fire Code

Title 24, Part 9 of the California Code of Regulations (CCR) is the California Fire Code. Title 24, Part 9 of the CCR sets forth regulations regarding building standards, fire protection and notification systems, fire protection devices such as fire extinguishers and smoke alarms, high-rise building standards, and fire suppression training. The 2007 California Fire Code is the incorporation of the 2006 International Fire Code of the International Code Council with necessary California amendments. Development under the Plan would be subject to applicable regulations of the California Fire Code.

Local

County and City General Plan Safety Element and Public Services and Facilities Element

In addition to federal and state regulations, cities and counties in the SCAG region may also provide regulatory protection and advisement regarding public services. California law requires that a general plan include seven elements (land use, open space, conservation, housing, circulation, noise, and safety). Many jurisdictions incorporate policies related to public services into the Safety Element. Other jurisdictions choose to prepare a separate (optional) element dealing with public services and facilities issues.

California Code of Regulation Section 65302(g) specifically provides that a city may adopt the county's safety element if the county's element "is sufficiently detailed containing appropriate policies and programs for adoption by a city." the safety element must include methods to reduce the potential risk of fires, floods, earthquakes, landslides, and other hazards. Other locally relevant safety issues, such as emergency response, hazardous materials spills, and crime reduction, may also be included. Some local jurisdictions have also incorporated their hazardous waste management plans into their safety elements. In addition, the safety element may be used to establish programs and policies that promote neighborhood, institutional, governmental, and business safety. The safety element must identify and map urban fringe and rural-residential areas that are prone to wildfires, adequate evacuation routes and peak load water supplies to reduce fire hazards. The policies of the safety element form the basis of adopted fire safe ordinances and strategic fire defense system zoning. Several jurisdictions have also adopted a Public Services and Facilities Element that establishes goals, objectives, policies and standards for public services and utilities, including emergency response standards.

The safety elements and public services and facilities elements of the county general plans within the six-county SCAG region establish the following fire protection service and police protection service standards at a County level:

Imperial County

Fire Response Standards: The Imperial County General Plan does not establish fire response standards for unincorporated areas.¹⁷ Incorporated cities within Imperial County have established fire response

¹⁷ County of Imperial Planning/Building Department. Accessed 11 September 2015. *General Plan: Seismic and Public Safety Element*. Available at: <http://www.icpds.com/?pid=837>

standards. For instance, the City of El Centro's standard fire response time is approximately 7 to 10 minutes for emergencies and 10 to 15 minutes for non-emergencies.¹⁸

Police Response Standards: The Imperial County General Plan does not establish police response standards for unincorporated areas.¹⁹ Incorporated cities within Imperial County have established police response standards. For instance, the El Centro Police Department's goal is to have 1.75 police officers per 1,000 population.²⁰

Los Angeles County

Fire Response Standards: According to the Safety Element of the Santa Clarita Valley Area Plan, the Los Angeles County Fire Department (LACFD) has adopted a goal of responding to calls in urban areas within five minutes, in suburban areas within eight minutes, and in rural areas within 12 minutes (Policy S-3.3.1).²¹ Incorporated cities within Los Angeles County have also established fire response standards.

Police Response Standards: To effectively and efficiently fulfill all of its functions, the Fire Department requires a staff level of one deputy sheriff per each 1,000 population.²² According to the Safety Element of the Santa Clarita Valley Area Plan, the County Sheriff's Department strives to maintain one officer per 1,000 people. Incorporated cities within Los Angeles County have also established police response standards.

Orange County

Fire Response Standards: In accordance with the Insurance Services Office (ISO) suggested standards, ultimate fire protection rating shall be maintained by General Plan land use categories as follows: (1) ISO 3 for all urban developments including Residential (1C and 1B), Commercial (2A and 2B), Employment (3.0) and Public Facilities (4.0) which are within 5 miles from a fire station and less than 1,000 feet from a hydrant; and (2) ISO 4 for Rural Residential (1A) which are within 5 miles from a fire station and less than 100 feet from a hydrant. For areas greater than 5 miles or 1,000 feet, the ISO suggested standard is 9. Fire/paramedic facilities shall be sited in locations so as to assure efficient fire rescue and paramedic response for the service area. General criteria for site selection shall include:²³

- (a) Call response time: for 80 percent of the service area, first fire engine to reach the emergency scene within 5 minutes and paramedic to reach the scene within 8 minutes.

- (b) Land use compatibility: stations shall be located in commercial or industrial, or open space zones in order to avoid disturbance to residential areas wherever possible.
- (c) Street access: stations shall be located adjacent to arterial highways with controlled traffic signalization

Incorporated cities within Orange County have also established fire response standards.

Police Response Standards: The adequacy of Sheriff service for land use proposals is determined through the Environmental Impact Report (EIR), Fiscal Impact Report (FIR), and Annual Monitoring Report (AMR) review processes.²⁴ Incorporated cities within Orange County have also established police response standards.

Riverside County

Fire Response Standards: According to the Riverside County Fire Department Strategic Plan 2009-2029, the Riverside County Fire Department considers National Fire Protection Association (NFPA) Standard 1710 as a guideline for fire station location methodology, which calls for an engine company within 4:00 minutes of travel time to fire incidents and EMS calls, and a full first-alarm group within 8:00 minutes, all for a minimum of 90 percent of annual incidents.²⁵ Incorporated cities within Riverside County have also established fire response standards. For instance, in the City of Corona, the targeted level of service is a 5-minute or less response time (General Plan Policy 9.2.1).²⁶

Police Response Standards: The Riverside County Sheriff's Department has established a goal of maintaining 1.5 sworn officers per 1,000 population, as recommended by the ICMA (Riverside County Integrated Project (RCIP)).^{27,28} According to EIR No. 441 for the 2003 RCIP General Plan, the Riverside County Sheriff's Department has established the following criteria for its staffing requirements in unincorporated areas of Riverside County:²⁹

- One sworn officer per 1,000 population (Mitigation Measure 4.15.C for EIR No. 441 specifies the use of a 1.5-officer per 1,000 population standard for new development mitigation purposes)

- One supervisor and one support staff employee per seven officers
- One patrol vehicle per three sworn officers
- One school resource officer per school

Incorporated cities within Riverside County have also established police response standards. For instance, the City of Riverside endeavors to provide minimum response times of seven minutes on all Priority 1 calls and 12 minutes on all Priority 2 calls (Policy PS-7.5).³⁰

San Bernardino County

Fire Response Standards: The San Bernardino County General Plan does not establish fire response standards for unincorporated areas.³¹ Incorporated cities within San Bernardino County have established fire response standards. For instance, the City of Victorville has established a goal to have the first on scene unit arrive within five minutes.³²

Police Response Standards: The San Bernardino County General Plan does not establish police response standards for unincorporated areas.³³ Incorporated cities within San Bernardino County have established police response standards.

Ventura County

Fire Response Standards: The Ventura County Fire Protection District's goal is to maintain an average emergency response time under five minutes in urban areas and under seven minutes in rural areas.³⁴ Incorporated cities within Ventura County have also established fire response standards. For instance, the City of Fillmore has established a desired ratio of 1.5 firefighters per 1,000 population.³⁵

Police Response Standards: The Ventura County General Plan does not establish police response standards for unincorporated areas.³⁶ Incorporated cities within Ventura County have established police

response standards. For instance, the City of Fillmore has established a desired level of one patrol officer per 1,000 population.³⁷

Local planning policies related to education services are established in each jurisdiction's general plan, usually in a Public Services Element. In general, jurisdictions have policies in place that state that public services must be provided at the same time (or in advance of) need for that service. In addition to these general policies, jurisdictions may have more specific policies tailored to performance objectives, as well as development fees.

3.15.2 EXISTING CONDITIONS

Fire Protection Services

Fire protection within the SCAG region includes a variety of federal, state, county, city, and other local fire protection agencies. Primary fire protection services occur at the community level, with city and county fire departments and fire protection districts providing this service. Also serving are a variety of volunteer fire companies. In addition, fire protection agencies provide fire protection services within state and federal lands. These agencies include, but are not limited to, federal fire agencies (Bureau of Land Management, National Park Service, National Forest Service, Department of Defense, etc.), state forestry department (CAL FIRE), tribal fire departments, airport and harbor fire departments, and in some instances business-sponsored fire departments (i.e., refineries, etc.).

Each agency provides fire services within its own area of responsibilities, but each can call upon other agencies for fire support through mutual aid agreements. Generally, fire departments take proactive and preventative measures to provide fire suppression and emergency response services for all private, institutional, and public facilities within their area of responsibility. There are over 100 county, city, or other independent fire entities that provide emergency response services in the SCAG region (Table 3.15.2-1, *Fire Protection Service Providers for Jurisdictions within SCAG Counties*). County service is for both unincorporated areas, cities that contract with the county for fire protection service and independent fire protection districts.

Within the SCAG region, fire response standards range from a 5-minute or less emergency response time in urban areas to a 12-minute response time in rural Los Angeles County.^{38,39}

firefighters trained in infectious disease response in the Los Angeles County Fire Department,⁴² 1,011 Orange County Fire Authority firefighters,⁴³ 1,160 career firefighters and 250 volunteer reserve firefighters in the Riverside County Fire Department,⁴⁴ 639 San Bernardino County Fire Department fire suppression personnel,⁴⁵ and 383 Ventura County Fire Protection District safety personnel.⁴⁶ Within the large city of Los Angeles (471-square-mile jurisdiction), a total of 1,018 uniformed firefighters (including 270 serving as firefighters/paramedics), are always on duty at fire department facilities citywide.⁴⁷ In comparison, the City of Riverside Fire Department employs 211 full-time firefighters over a primary response area of over 81 square miles.⁴⁸

Police Protection Services

Law enforcement within the SCAG region takes into account a variety of federal, state, county, city, and other local law enforcement agencies (Table 3.15.2-2, *Police Service Providers for Jurisdictions within SCAG Counties*). As with fire protection services, primary law enforcement is at the community level, with city police and sheriff's departments providing this service. Additionally, there are more specialized law enforcement agencies that assist in law enforcement at the community or resource level in the SCAG region. These specialized agencies include, but are not limited to, CHP, school police, airport and harbor police, transit police, tribal police, park rangers (federal, state, county, and city), and a wide variety of federal agencies (FBI, ATF, etc.). Each agency has its own responsibilities, some of which may overlap with other law enforcement agencies. State park rangers may call upon sheriff's deputies for assistance. Transit police might call upon city police to aid them. In general, law enforcement agencies provide first response to all emergencies, perform preliminary investigations, and provide basic patrol services in their service area. County service is for both unincorporated areas and cities that contract with the county for law enforcement services.

Within the SCAG region, police response standards range from 1 sworn officer per 1,000 population to 1.75 sworn officers per 1,000 population.^{49,50}

Schools

Although the California public school system is subject to state requirements, the California Department of Education relies on local control for the management of school districts. In allocating resources among the schools of the district, school district governing boards and district administrators must follow the law, but also set the educational priorities for their schools. As of the 2014–2015 school year, there were more than 1,000 school districts in California.

According to the California Department of Education, there are approximately 3.1 million students enrolled in schools in the SCAG region, ranging from kindergarten to 12th grade, with approximately 138,000 teachers (Table 3.15.2-3, *Kindergarten through Grade 12 Enrollment and Teachers in the SCAG Region for the 2014–2015 School Year*).⁵¹ The number of K–12 school districts range from a low of 17 in Imperial County to a high of 89 in Los Angeles County, with a corresponding range of school from a low of 67 in Imperial County to over 2,000 in Los Angeles County (Table 3.15.2-4, *Public and Private Schools in the SCAG Region*). Three counties have University of California campuses, and all but one county have one or more California State University campuses (Table 3.15.2-4).

Other Public Service Agencies Engaged in Emergency Preparedness and Security

Federal

FEMA

The six counties of the SCAG region are within FEMA Region IX, which covers the American Samoa territory; the states of Arizona, California, Hawaii, and Nevada; Guam; the Commonwealth of the Marianas Islands; the Federated States of Micronesia; and the Republic of the Marshall Islands. FEMA has 10 regional offices, each headed by a regional administrator. The regional office for Region IX is in Oakland, California. In Southern California, FEMA Region IX specifically plans for hazards such as major earthquakes and wildfires. Each of FEMA's regional offices maintains a Regional Response Coordination Center (RRCC). When activated, RRCCs are multiagency coordination centers generally staffed by ESFs in anticipation of or immediately following an incident. Operating under the direction of the FEMA regional administrator, the staff within the RRCCs coordinates federal regional response efforts and maintains connectivity with FEMA headquarters and with state EOCs, state and major urban area fusion centers, federal executive boards, and other federal and state operations and coordination centers that potentially contribute to the development of situational awareness. The Unified Coordination Group (UCG) assumes responsibility for coordinating federal response activities at the incident level once unified coordination is established, freeing the RRCC to deal with new incidents should they occur.⁵²

TSA

TSA responsibilities in the SCAG region are focused on protection of people and commerce, including deployment at the 57 airports in the SCAG region.

NIMS

The SCAG region is under the jurisdiction of Region IX: Oakland.⁵³ The State of California adopted NIMS in 2005 by Executive Order S-2-05, and all the Counties and most of the tribes and cities in the SCAG region are involved in NIMS through the Offices of Emergency Services/Offices of Emergency Management.⁵⁴

United States Coast Guard

The Eleventh Coast Guard District encompasses the states of California, Arizona, Nevada, and Utah, the coastal offshore waters, and the offshore waters of Mexico and Central America down to South America.⁵⁵ The Eleventh District now includes 48 units and employs 2,600 active duty, reserve, and

civilian employees. These resources carry out Search and Rescue, Homeland Security, Law Enforcement, Marine Safety, and Aids to Navigation missions over 3.3 million square miles of water. The Coast Guard has assumed a dynamic role in protecting the District's major ports, which include two Tier One ports in the SCAG region: Los Angeles and Long Beach.

State

California Department of Transportation (Caltrans)

The SCAG region is located within the jurisdiction of Caltrans Districts 7 (Los Angeles and Ventura counties), 8 (Riverside and San Bernardino counties), 11 (Imperial County), and 12 (Orange County). Caltrans, in conjunction with the California Highway Patrol (CHP), has TMCs to rapidly detect and respond to incidents while managing the resulting congestion. With the help of intelligent transportation system technologies, such as electronic sensors in the pavement, freeway call boxes, video cameras, ramp meter sensors, earthquake monitors, motorist cellular calls, and commercial traffic reports; as well as Caltrans highway crews, 911 calls and officers on patrol, the TMC provides coordinated transportation management for general commutes, special events and incidents affecting traffic. The TMCs are operated within each Caltrans district. For the SCAG region, Districts 7, 8, 11, and 12 all have TMCs.

Local

County Offices of Emergency Services

Counties and cities are generally the first responders to any security or emergency situation. These responders include fire departments, police and sheriff department, hospitals, ambulance services and transportation agencies. Coordination among public and private agencies within various cities and counties make the most use of all available resources in the event of any emergency.

While each city and county has its own security procedures, the policies are generally similar. Mutual Aid agreements between cities, counties, and private organizations help to maximize resources and reduce the human suffering associated with disaster situations. Each SCAG county has a department in charge of security and emergency response (Table 3.15.2-5, *County Offices of Emergency Services*).

3.15.3 THRESHOLDS OF SIGNIFICANCE

The potential for the 2016 RTP/SCS to result in impacts related to public services was analyzed in relation to the question contained in Appendix G of the State CEQA Guidelines. The Plan would normally be considered to have a significant impact related to public services if it would:

- Cause substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, the need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times or other performance objectives for any of the following public services:
 - Fire protection and emergency response
 - Public protective security
 - Schools
 - Parks (see Section 3.16, *Recreation*)

Methodology

The 2016 RTP/SCS includes coordinated regional strategies for transportation investments and land use and related development that are aimed to increase mobility, promote sustainability, and improve the regional economy, consistent with project population growth. The Regional Travel Demand Model (RTDM) used for this analysis captures pass-through traffic that does not have an origin or destination in the region, but does impact the region, so that too is included in the project analysis. Although development is anticipated to occur within the region even without the 2016 RTP/SCS, this Plan includes regional land use growth policies and strategies that would likely influence growth distribution patterns throughout the region. To address this, the analysis in the PEIR covers overall impacts of transportation projects and land development strategies described in the 2016 RTP/SCS. In addition, this PEIR considers cumulative impacts from other local projects (e.g., development projects that have been approved, or included in the policy growth forecast provided by member agencies in the SCAG region, which could result in additional impacts inside and outside the region. The methodology for determining the significance of public services impacts compares the existing conditions to future (2040) conditions, as required in CEQA Section 15126.2(a). This analysis evaluates the potential for significant impacts of the 2016 RTP/SCS to public services in accordance with Appendix G of the State CEQA Guidelines and guidelines established by federal and state public agencies; Ventura, Los Angeles, Orange, San Bernardino, Riverside, and Imperial Counties; and major cities within the SCAG region.

The analysis evaluates fire protection facilities, police facilities, educational facilities, and other public facilities that could be affected by the implementation of the projects, programs, and policies identified in the 2016 RTP/SCS. To assess potential impacts to public services within the SCAG region, a geographic information system (GIS) was used to analyze major highway, transit, and freight rail projects in the 2016 RTP/SCS. Land use patterns in the SCAG region were compared with the location of transportation projects included in the Plan and anticipated development resulted from land use strategies of the Plan to determine the degree of potential impact on population growth in existing urban, suburban, and other areas in the region. The results of the GIS analysis determined whether the Plan could directly affect service ratios, response times, or other performance objectives for public services in the SCAG region, requiring new or physically altered governmental facilities. Indirect impacts were evaluated based on the land use pattern assumptions that protected lands would remain protected and new growth would be focused in urbanized areas in high-quality transit areas (HQTAs) (near transit services), underdeveloped opportunity urban areas, suburban town centers .

Impacts to police, fire and emergency services were evaluated with SCAG policy growth forecast data related to projected population, housing, and employment growth⁵⁶ and available data on existing public services within the SCAG region. Impacts to public service facilities were evaluated with SCAG data related to projected population growth and available data on public services within the SCAG region. The methodology for determining the significance of these impacts applies the significance criteria above to the expected future (2040) demand for public service facilities and compares future demand with the Plan to the existing capacity.

⁵⁶ Southern California Association of Governments. 5 November 2015. *Item No. 1 Staff Report: Draft 2016-2040 Regional Transportation Plan/Sustainable Communities Strategy (2016 RTP/SCS) – Proposed Major Components*. Available at: <http://www.scag.ca.gov/committees/CommitteeDocLibrary/jointRCPC110515fullagn.pdf>

3.15.4 IMPACT ANALYSIS

IMPACT PS-1: Potential to cause substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, the need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times or other performance objectives for fire protection and emergency response services.

Significant Impact

Implementation of the transportation projects and land use strategies reflected in the 2016 RTP/SCS would result in the potential to cause substantial physical impacts associated with the provision of new or physically altered fire stations that would be required to maintain acceptable service ratios and response time for fire protective services, constituting a significant impact. There are several types of transportation projects included within the 2016 RTP/SCS that, upon completion, would require different levels of fire protection and emergency response services. For instance, the improvements to, and increased use of, non-motorized transportation methods such as bicycle routes and associated facilities, are anticipated to require minimal amounts of additional fire protection and emergency response services for safety. In contrast, additional fire personnel would be needed to adequately respond to emergencies and routine calls, particularly on new or expanded transportation facilities. New light rail transit (LRT) and commuter rail routes/extensions in Los Angeles, Orange, Riverside, and San Bernardino counties, as well as other transit-related projects, would involve the construction of transit stations. These transit stations, upon completion, would require fire protection and emergency response services. Increased use of transit would involve an increased need for fire protection and emergency response services for protection and rescue services.

The 2016 RTP/SCS also includes land use strategies that might influence development patterns in the region for the next 25 years. The Plan's land use strategies focus new growth in HQTAs, existing suburban town centers and walkable, mixed-use communities. According to the Plan, focusing new growth in HQTAs is an important aspect of the proposed land use strategies. As described in **Section 2.0, Project Description**, the region is expected to add approximately 3.8 million new people, approximately 1.5 million new households, and approximately 2.4 million new jobs during the next 25 years. "While HQTAs account for only 3 percent of total land area in SCAG region, they are planned and project to accommodate [approximately] 46 percent of the region's future household growth, and 50 percent of the future employment growth."⁵⁷ Moreover, the transportation projects included in the Plan that involve transit, passenger rail, and active transportation are concentrated in urban and suburban areas, including Palm Springs, Riverside, San Bernardino, Anaheim, Irvine, the Los Angeles Basin, the San Gabriel Valley, the San Fernando Valley, Santa Clarita, Palmdale, and Lancaster. As these urban and suburban areas experience a potentially higher density in terms of a higher housing/job ratio and more densified, mixed-use development, additional fire protection and emergency response services would be required to meet emergency response standards. Such increased density in these

⁵⁷ Southern California Association of Governments. 5 November 2015. *Item No. 1 Staff Report: Draft 2016-2040 Regional Transportation Plan/Sustainable Communities Strategy (2016 RTP/SCS) – Proposed Major Components*. Available at: <http://www.scag.ca.gov/committees/CommitteeDocLibrary/jointRCPC110515fullagn.pdf>

areas would have the potential to exceed the capacity of existing fire stations to provide adequate response, thus requiring either the expansion of existing station to accommodate greater number of personnel or the construction of new stations, which are more strategically located stations, capable of reducing response time within a denser urban pattern of development. In addition, fire protection and emergency response services may need to be able to expand where development occurs in the wildland urban interface in response to increased wildfire risk.

Throughout the SCAG region, emergency service providers have historically accommodated increases in demand (with increased staff and facilities funded through general funds of each jurisdiction). New or expanded transportation facilities would have a potential to increase the demand for emergency personnel and facilities potentially without increasing funding or identifying new available funding sources, resulting in a potentially significant impact related to fire protection and emergency response services. Densified development in some areas of the region would potentially increase demand for fire protection and emergency response services. Frequently tax revenues associated with development pays for increased services, however, tax revenue is not always sufficient.

The 2016 RTP/SCS would potentially contribute to substantial adverse physical impacts associated with the provision of new or physically altered fire protection and emergency response facilities in order to maintain acceptable service ratios, requiring the consideration of mitigation measures.

IMPACT PS-2: Potential to cause substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, the need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times or other performance objectives for public protective security services.

Significant Impact

Implementation of the transportation projects and land use strategies reflected in in the 2016 RTP/SCS would have a potential to cause substantial physical impacts associated with the provision of new or physically altered public protective security services (including sheriff, police, CHP, and OES) that would be required to maintain acceptable service ratios and response time for public protective security services, constituting a significant impact. DHS and TSA staff are generally deployed at transportation facilities; therefore, the 2016 RTP/SCS would not be expected to require new or expanded facilities beyond those developed as elements of the transportation projects.

However, there are several types of projects like new or expanded transportation projects included in the 2016 RTP/SCS that, upon completion, would require different levels of public protective security services. Additional police personnel would be needed to adequately respond to emergencies and routine calls, particularly on new or expanded transportation facilities. New LRT and commuter rail routes/extensions in Los Angeles, Orange, Riverside, and San Bernardino counties, as well as other transit-related projects, would involve the construction of new transit stations. These new transit stations, upon completion, would require public protective security services. In some cases, such as with Metro, the governing transit authority provides security as an element of the project, which would result in a less than significant impact to public protective security services. Moreover, one of the goals

of the 2016 RTP/SCS is to maximize mobility and accessibility for all people and goods in the region, and to accomplish that, the Plan includes transportation investments (e.g., “64 percent of total operations and maintenance” and “20 percent of capital investments” on transit),⁵⁸ and land use strategies to encourage more people to use transit services. These strategies would likely add new transit facilities and increase the use of existing and new transit, thereby resulting in an increased need for public protective security services for protection and rescue services. However, the improvements to, and increased use of, non-motorized transportation methods such as bicycle routes and associated transportation facilities, are anticipated to require minimal amounts of additional police and emergency services for security and safety.

The 2016 RTP/SCS also includes land use strategies that focus new growth in HQTAs, existing suburban town centers and encourage more walkable, mixed-use communities. According to the Plan, it is projected that approximately 46 percent of the new household growth and 50 percent of the new employment growth would be planned in HQTAs.⁵⁹ These HQTAs are concentrated in suburban and urban areas, including Palm Springs, Riverside, San Bernardino, Anaheim, Irvine, the Los Angeles Basin, the San Gabriel Valley, the San Fernando Valley, Santa Clarita, Palmdale, and Lancaster. As these suburban and urban areas experience more people working and living there, additional police services would be required. As a result, anticipated development patterns that are influenced by the land use strategies of the 2016 RTP/SCS would have a potential to result in additional needs for public protective security services, usually in direct proportion to densified environment.

The population in the SCAG region is anticipated to increase by approximately 3.8 million people over the next 25 years, with or without the Plan.^{60,61} Based on the police response standards within the SCAG region that range from 1 sworn officer per 1,000 population to 1.75 sworn officers per 1,000 population, the projected growth for 2040, and an assumption of current adequate staffing, the number of sworn officers needed within the SCAG region to maintain acceptable service ratios is anticipated to increase by approximately 3,500, ranging from approximately 58 new sworn officers in Imperial County to approximately 1,472 new sworn officers in Los Angeles County.⁶² The transportation projects and land use strategies in the 2016 RTP/SCS focus development in urbanized portions of the region, specifically in HQTAs and other existing infrastructure such as transit. As more people are interested in and choosing to live and work in HQTAs where there will be more compact, walkable, and bikeable communities, it is likely that a densified development would increase the demand for sworn officers. This would likely increase the staffing of sworn officers and create a potential need to construct new stations that would have the potential to result in physical alterations and related significant effects on the environment.

⁵⁸ Southern California Association of Governments. December 2015. *Draft 2016 RTP/SCS: Chapter 6*.

⁶¹ SCAG locally reviewed policy forecast model (as of October 5, 2015).

⁶² Southern California Association of Governments. Accessed 11 September 2015. *Profiles of Imperial County, Los Angeles County, Orange County, Riverside County, San Bernardino County, and Ventura County*. Available at: <http://www.scag.ca.gov/DataAndTools/Pages/LocalProfiles.aspx>

Throughout the SCAG region, emergency service providers have historically accommodated increases in demand (with increased staff and facilities funded through general funds of each jurisdiction). As analyzed above, new or expanded transportation facilities included in the 2016 RTP/SCS may increase the demand for emergency personnel and facilities potentially without increasing funding, resulting in a significant impact related to police protection services. Anticipated development patterns that would be influenced by land use strategies included in the 2016 RTP/SCS would also likely increase demand for public protective security services. Though tax revenues associated with development pays for increased services, tax revenue is not always sufficient.

Therefore, the 2016 RTP/SCS would potentially contribute to substantial adverse physical impacts associated with the provision of new or physically altered public protective security facilities in order to maintain acceptable service ratios, requiring the consideration of mitigation measures.

IMPACT PS-3: Potential to cause substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, the need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times or other performance objectives for school services.

Significant Impact

Implementation of the transportation projects and land use strategies with the related development patterns reflected in the 2016 RTP/SCS would result in potential to cause substantial physical impacts associated with the provision of new or physically altered schools that would be required to maintain acceptable service ratios and response time for school services, constituting a significant effect. Population in the SCAG region is anticipated to increase by approximately 3.8 million people over the next 25 years, with or without the Plan.^{63,64} Based on the 2014–2015 enrollment of approximately 3.1 million students in the SCAG region (approximately 16.4 percent of an overall 2014 population of 18.5 million), and considering the projected growth scenario for 2040, the number of children enrolled in K–12 schools is anticipated to increase by approximately 589,000 students.⁶⁵ The land use strategies included in the 2016 RTP/SCS direct new growth to existing urbanized communities within the SCAG region. For example, as projected by the 2016 RTP/SCS, HQTAs are planned to accommodate 46 percent of the region's future household growth. It is anticipated that this increase in population and households in already existing communities and HQTAs would require construction or expansion of new schools in the region to accommodate the increased growth as well as densified development (e.g., more families living and/or working there). Therefore, the 2016 RTP/SCS would potentially contribute to substantial adverse physical impacts associated with the provision of new or physically altered school

⁶⁵ Southern California Association of Governments. Accessed 11 September 2015. *Profiles of Imperial County, Los Angeles County, Orange County, Riverside County, San Bernardino County, and Ventura County*. Available at: <http://www.scag.ca.gov/DataAndTools/Pages/LocalProfiles.aspx>

facilities in order to maintain acceptable service ratios, requiring the consideration of mitigation measures.

IMPACT PS-4: Potential to cause substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, the need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times or other performance objectives for park services.

Parks are evaluated in Section 3.16, *Recreation*.

3.15.5 CUMULATIVE IMPACTS

Related projects considered within each county in combination with the 2016 RTP/SCS include development projects and the Mesquite Lake Specific Plan in Imperial County; development (including mixed-use) projects, the town of Centennial, the Newhall Ranch Specific Plan, the Northlake Specific Plan, and the City of Los Angeles' Mobility Plan 2035 in Los Angeles County; the Orange County Affordable Housing Implementation Program – Ranch Plan, development projects, airport and utility expansion projects, recreation projects, the Anaheim Canyon Specific Plan, and the expansion of the James A. Musick Jail in Orange County; development projects, the Riverside Community Hospital Specific Plan, the California Baptist University Specific Plan in Riverside County; the Glen Hellen Specific Plan and the Specific Plan for Hacienda at Fairview Valley in San Bernardino County; and new fire stations, utility expansion projects, and subdivision projects in Ventura County.

IMPACT PS-1: Potential to cause substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, the need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times or other performance objectives for fire protection services and emergency response.

Significant Cumulative Impact

The 2016 RTP/SCS would contribute to cumulative significant impacts in the region when considered with related projects in regard to fire protection and emergency response services because many areas already have insufficient fire protection and emergency response service, and implementation of the 2016 RTP/SCS would have the potential to further exacerbate existing needs and expanded needs from related projects. The related transportation projects and growth development patterns would also require the provision of new or physically altered governmental facilities to provide adequate fire response times in the vicinity of new development, resulting in a significant cumulative impact requiring the consideration of mitigation measures.

IMPACT PS-2: Potential to cause substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, the need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times or other performance objectives for public protective security services.

Significant Cumulative Impact

The 2016 RTP/SCS would also contribute to cumulative significant impacts in the region when considered with related projects in the region in regard to public protective security services because implementation of the Plan would likely require the provision of new or physically altered governmental facilities to provide adequate public protective security service ratios in response to implementation of the transportation projects included in the Plan and growth development patterns for accommodating anticipated population growth that the region would face in the next 25 years. Many areas already have insufficient public protective security services, and implementation of the 2016 RTP/SCS would likely further exacerbate existing needs and expanded needs from related projects, resulting in a significant cumulative impact requiring the consideration of mitigation measures

IMPACT PS-3: Potential to cause substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, the need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times or other performance objectives for school services.

Less than Significant Cumulative Impact

The 2016 RTP/SCS would not be expected to contribute to cumulative significant impacts in the region when considered with related projects in regard to school services because such changes would be addressed by planning efforts in jurisdictions. The state requires schools to be funded for school-age children by payment of school district fees in association with the related projects that involve population growth that can cause a potential strain on services, resulting in less than significant cumulative impact. The consideration of mitigation measures is not required.

3.15.6 MITIGATION MEASURES

Mitigation measures as they pertain to each CEQA question related to public services are described below. Mitigation measures are categorized into two categories: SCAG mitigation and project-level mitigation measures. SCAG mitigation measures shall be implemented by SCAG over the lifetime of the 2016 RTP/SCS. Project-level mitigation measures can and should be implemented by the Lead Agencies for transportation and development projects, as applicable and feasible.

IMPACT PS-1: Potential to cause substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, the need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times or other performance objectives for fire protection services.

SCAG Mitigation Measures

MM-PS-1(a)(1): SCAG shall facilitate minimizing future impacts to fire protection and emergency response services through cooperation, information sharing, and regional program development as part of SCAG's ongoing regional planning efforts, such as web-based planning tools for local government including CA LOTS, and other GIS tools and data services, including, but not limited to, Map Gallery, GIS library, and GIS applications, and direct technical assistance efforts to promote Fire Management and Emergency Response Planning such as Toolbox Tuesday Training series and sharing of associated online Training materials. Lead Agencies, such as county and city planning departments, shall be consulted during this update process.

MM-PS-1(a)(2): SCAG shall utilize its strengths and organization to assist planners, first responders, and recovery teams in a supporting role, in three key areas, before a major emergency and during the recovery period:

- Provide a policy forum to help develop regional consensus and education on security policies and emergency responses.
- Assist in expediting the planning and programming of transportation infrastructure repairs from major disasters.
- Encourage integration of transportation security measures into transportation projects early in the project development process by leveraging SCAG's relevant plans, programs, and processes, including regional ITS architecture. SCAG also participated in the development of the draft Southern California Catastrophic Earthquake Preparedness Plan.⁶⁶

MM-PS-1(a)(3): SCAG shall facilitate minimizing future impacts to fire protection services through information sharing regarding Fire-wise Land Management (data regarding fire-resistant vegetation, fire-resistant materials, locations where development is potentially hazardous in regard to wildfire, and management of brush and other fire risks in the immediate vicinity of development in areas with high fire threat) with county and city planning departments.

Project-Level Mitigation Measures

Mitigation Measures MM-AES-1(b), MM-AES-3(b), MM-AES-4(b), MM-AF-1(b), MM-AF-2(b), MM-BIO-1(b), MM-BIO-2(b), MM-BIO-3(b), MM-CUL-1(b), MM-CUL-2(b), MM-CUL-3(b), MM-CUL-4(b), MM-GEO-1(b), MM-GEO-1(b), MM-HYD-1(b), MM-USS-3(b), MM-USS-4(b), and MM-USS-6(b).

⁶⁶ California Emergency Management Agency. 2010. *Southern California Catastrophic Earthquake Response Plan*. Available at: [http://www.caloes.ca.gov/PlanningPreparednessSite/Documents/SoCalCatastrophicConops\(Public\)2010.pdf](http://www.caloes.ca.gov/PlanningPreparednessSite/Documents/SoCalCatastrophicConops(Public)2010.pdf)

MM-PS-1(b): Consistent with the provisions of Section 15091 of the State CEQA Guidelines, SCAG has identified mitigation measures capable of avoiding or reducing the significant effects from the need for new or physically altered governmental facilities in order to maintain acceptable response times for fire protection and emergency response services that are within the jurisdiction and responsibility of fire departments, law enforcement agencies, and local jurisdictions. Where the Lead Agency has identified that a project has the potential for significant effects, the Lead Agency can and should consider mitigation measures consistent with the Community Facilities Act of 1982, the goals and policies established within the applicable adopted county and city general plans and the performance objectives established in the adopted county and city general plans, to provide sufficient structures and buildings to accommodate fire and emergency response, as applicable and feasible. Such measures may include the following, or other comparable measures identified by the Lead Agency, taking into account project and site-specific considerations as applicable and feasible:

- Where the project has the potential to generate the need for expanded emergency response services which exceed the capacity of existing facilities, provide for the construction of new facilities directly as an element of the project or through dedicated fair share contributions toward infrastructure improvements.
- During project-level review of government facilities projects, require implementation of Mitigation Measures MM-AES-1(b), MM-AES-3(b), MM-AES-4(b), MM-AF-1(b), MM-AF-2(b), MM-BIO-1(b), MM-BIO-2(b), MM-BIO-3(b), MM-CUL-1(b), MM-CUL-2(b), MM-CUL-3(b), MM-CUL-4(b), MM-GEO-1(b), MM-GEO-1(b), MM-HYD-1(b), MM-USS-3(b), MM-USS-4(b), and MM-USS-6(b) to avoid or reduce significant environmental impacts associated with the construction or expansion of such facilities, through the imposition of conditions required to be followed to avoid or reduce impacts associated with air quality, noise, traffic, biological resources, greenhouse gas emissions, hydrology and water quality, and others that apply to specific construction or expansion of new or expanded public service facilities.

IMPACT PS-2: Potential to cause substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, the need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times or other performance objectives for public protective security services.

SCAG Mitigation Measures

MM-PS-1(a)(2).

MM-PS-2(a)(1): SCAG shall facilitate minimizing future impacts to public protective security services through cooperation, information sharing, and regional program development as part of SCAG's ongoing regional planning efforts, such as web-based planning tools for local government including CA LOTS, and other GIS tools and data services, including, but not limited to Map Gallery, GIS library, and GIS applications, and direct technical assistance efforts to promote public protective security services planning such as Toolbox Tuesday Training series and sharing of associated online training materials.

Lead Agencies, such as county and city planning departments, shall be consulted during this update process.

MM-PS-2(a)(2): SCAG shall help to enhance the region's ability to deter and respond to acts of terrorism, human-caused or natural disasters through regionally cooperative and collaborative strategies. SCAG shall work with local officials to develop regional consensus on regional transportation safety, security, and safety security policies.

MM-PS-2(a)(3): SCAG shall help to enhance the region's ability to deter and respond to terrorist incidents, human-caused or natural disasters by strengthening relationship and coordination with transportation. This will be accomplished by the following:

- SCAG shall work with local officials to develop regional consensus on regional transportation safety, security, and safety security policies.
- SCAG shall encourage all SCAG elected officials are educated in NIMS.
- SCAG shall work with partner agencies, federal, state and local jurisdictions to improve communications and interoperability and to find opportunities to leverage and effectively utilize transportation and public safety/security resources in support of this effort.

MM-PS-2(a)(4): SCAG shall encourage and provide a forum for local jurisdictions to develop mutual aid agreements for essential government services during any incident recovery.

Project-Level Mitigation Measures

Mitigation Measures MM-AES-1(b), MM-AES-3(b), MM-AES-4(b), MM-AF-1(b), MM-AF-2(b), MM-BIO-1(b), MM-BIO-2(b), MM-BIO-3(b), MM-CUL-1(b), MM-CUL-2(b), MM-CUL-3(b), MM-CUL-4(b), MM-GEO-1(b), MM-GEO-1(b), MM-HYD-1(b), MM-USS-3(b), MM-USS-4(b), and MM-USS-6(b).

MM-PS-2(b): Consistent with the provisions of Section 15091 of the State CEQA Guidelines, SCAG has identified mitigation measures capable of avoiding or reducing the significant effects from the need for new or physically altered governmental facilities in order to maintain acceptable service ratios for police protection services that are within the jurisdiction and responsibility of law enforcement agencies and local jurisdictions. Where the Lead Agency has identified that a project has the potential for significant effects, the Lead Agency can and should consider mitigation measures consistent with the Community Facilities Act of 1982, the goals and policies established within the applicable adopted county and city general plans and the standards established in the safety elements of county and city general plans to maintain police response performance objectives, as applicable and feasible. Such measures may include the following, or other comparable measures identified by the Lead Agency, taking in to account project and site-specific considerations as applicable and feasible, including:

- Coordinate with public security agencies to ensure that there are adequate governmental facilities to maintain acceptable service ratios, response times or other performance objectives for public protective security services and that any required additional construction of buildings is incorporated in to the project description.

- Where current levels of services at the project site are found to be inadequate, provide fair share contributions towards infrastructure improvements and/or personnel.
- During project-level review of government facilities projects, require implementation of Mitigation Measures MM-AES-1(b), MM-AES-3(b), MM-AES-4(b), MM-AF-1(b), MM-AF-2(b), MM-BIO-1(b), MM-BIO-2(b), MM-BIO-3(b), MM-CUL-1(b), MM-CUL-2(b), MM-CUL-3(b), MM-CUL-4(b), MM-GEO-1(b), MM-GEO-1(b), MM-HYD-1(b), MM-USS-3(b), MM-USS-4(b), and MM-USS-6(b) to avoid or reduce significant environmental impacts associated with the construction or expansion of such facilities, through the imposition of conditions required to be followed to avoid or reduce impacts associated with air quality, noise, traffic, biological resources, greenhouse gas emissions, hydrology and water quality, and others that apply to specific construction or expansion of new or expanded public service facilities.

IMPACT PS-3: Potential to cause substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, the need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times or other performance objectives for school services.

SCAG Mitigation Measures

MM-PS-3(a): SCAG shall facilitate minimizing future impacts to school services through cooperation, information sharing, and regional program development as part of SCAG's ongoing regional planning efforts, such as web-based planning tools for local government including CA LOTS, and other GIS tools and data services, including, but not limited to, Map Gallery, GIS library, and GIS applications, and direct technical assistance efforts to promote school planning, such as Toolbox Tuesday Training series and sharing of associated online Training materials. Lead Agencies, such as county and city planning departments, shall be consulted during this update process.

Project-Level Mitigation Measures

Mitigation Measures MM-AES-1(b), MM-AES-3(b), MM-AES-4(b), MM-AF-1(b), MM-AF-2(b), MM-BIO-1(b), MM-BIO-2(b), MM-BIO-3(b), MM-CUL-1(b), MM-CUL-2(b), MM-CUL-3(b), MM-CUL-4(b), MM-GEO-1(b), MM-GEO-1(b), MM-HYD-1(b), MM-USS-3(b), MM-USS-4(b), and MM-USS-6(b).

MM-PS-3(b): Consistent with the provisions of Section 15091 of the State CEQA Guidelines, SCAG has identified mitigation measures capable of avoiding or reducing the significant effects from the need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times or other performance objectives that are within the jurisdiction and responsibility of school districts and local jurisdictions. Where the Lead Agency has identified that a project has the potential for significant effects, the Lead Agency can and should consider mitigation measures consistent with Community Facilities Act of 1982, the California Education Code, and the goals and policies established within the applicable adopted county and city general plans to ensure that the appropriate school district fees are paid in accordance with state law, as applicable and feasible. Such measures may include the following,

or other comparable measures identified by the Lead Agency, taking in to account project and site-specific considerations as applicable and feasible:

- Where construction or expansion of school facilities is required to meet public school service ratios, require school district fees, as applicable.
- During project-level review of government facilities projects, require implementation of Mitigation Measures MM-AES-1(b), MM-AES-3(b), MM-AES-4(b), MM-AF-1(b), MM-AF-2(b), MM-BIO-1(b), MM-BIO-2(b), MM-BIO-3(b), MM-CUL-1(b), MM-CUL-2(b), MM-CUL-3(b), MM-CUL-4(b), MM-GEO-1(b), MM-GEO-1(b), MM-HYD-1(b), MM-USS-3(b), MM-USS-4(b), and MM-USS-6(b) to avoid or reduce significant environmental impacts associated with the construction or expansion of such facilities, through the imposition of conditions required to be followed to avoid or reduce impacts associated with air quality, noise, traffic, biological resources, greenhouse gas emissions, hydrology and water quality, and others that apply to specific construction or expansion of new or expanded public service facilities.

3.15.7 LEVEL OF SIGNIFICANCE AFTER MITIGATION

IMPACT PS-1: Potential to cause substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, the need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times or other performance objectives for fire protection services.

Implementation of Mitigation Measures MM-PS-1(a)(1) through MM-PS-1(a)(3), MM-PS-1(b), MM-AES-1(b), MM-AES-3(b), MM-AES-4(b), MM-AF-1(b), MM-AF-2(b), MM-BIO-1(b), MM-BIO-2(b), MM-BIO-3(b), MM-CUL-1(b), MM-CUL-2(b), MM-CUL-3(b), MM-CUL-4(b), MM-GEO-1(b), MM-GEO-1(b), MM-HYD-1(b), MM-USS-3(b), MM-USS-4(b), and MM-USS-6(b) would reduce direct, indirect, and cumulative impacts to below the level of significance.

IMPACT PS-2: Potential to cause substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, the need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times or other performance objectives for public protective security services.

Implementation of Mitigation Measures MM-PS-1(a)(2), MM-PS-2(a)(1) through MM-PS-2(a)(4), and MM-PS-2(b) and Mitigation Measures MM-AES-1(b), MM-AES-3(b), MM-AES-4(b), MM-AF-1(b), MM-AF-2(b), MM-BIO-1(b), MM-BIO-2(b), MM-BIO-3(b), MM-CUL-1(b), MM-CUL-2(b), MM-CUL-3(b), MM-CUL-4(b), MM-GEO-1(b), MM-GEO-1(b), MM-HYD-1(b), MM-USS-3(b), MM-USS-4(b), and MM-USS-6(b) would reduce direct, indirect, and cumulative impacts to below the level of significance.

IMPACT PS-3: Potential to cause substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, the need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times or other performance objectives for school services.

Implementation of Mitigation Measures MM-PS-3(a), MM-PS-3(b), MM-AES-1(b), MM-AES-3(b), MM-AES-4(b), MM-AF-1(b), MM-AF-2(b), MM-BIO-1(b), MM-BIO-2(b), MM-BIO-3(b), MM-CUL-1(b), MM-CUL-2(b), MM-CUL-3(b), MM-CUL-4(b), MM-GEO-1(b), MM-GEO-1(b), MM-HYD-1(b), MM-USS-3(b), MM-USS-4(b), and MM-USS-6(b) and compliance with state requirements for school district fees would reduce these direct and indirect impacts to below the level of significance.

3.16 RECREATION

This section of the Program Environmental Impact Report (PEIR) describes the recreation resources in the Southern California Association of Governments (SCAG) region, discusses the potential impacts of the proposed 2016 Regional Transportation Plan/Sustainable Communities Strategy (“2016 RTP/SCS,” “Plan,” or “Project”) on recreation, identifies mitigation measures for the impacts, and evaluates the residual impacts. Recreation was evaluated in accordance with Appendix G of the 2015 State California Environmental Quality Act (CEQA) Guidelines. Recreation within the SCAG region was evaluated at the programmatic level of detail, in relation to the general plans of the six counties and 191 cities within the SCAG region; the management plans for the four national forests in the SCAG region, Angeles National Forest, San Bernardino National Forest, Los Padres National Forest, and Cleveland National Forest; the California Recreational Trails Plan of 2002; a query of the California Protected Areas Database for local and regional parkland; a review of related literature germane to the SCAG region; as well as a review of SCAG’s 2012 RTP/SCS PEIR.¹

Publicly managed parks and recreation facilities are an important part of the California lifestyle and the high quality of life tied to a beautiful natural environment in communities built to encourage active healthy living.² According to a study conducted by California State Parks in 2005, two-thirds of Californians consider outdoor recreation important to their quality of life.³ In the most recent California State Parks survey (2012) on public opinions and attitudes on outdoor recreation in California, the park facilities and services that Californians thought were most important to them were wilderness-type areas where no vehicles or development are allowed; play areas for young children; areas for environmental and outdoor education programs; picnic sites for large groups; recreation facilities at lakes, rivers, and reservoirs; and single-use trails.⁴ The six-county SCAG region includes approximately 150 miles of California’s approximately 840-mile coastline, including wide sandy beaches such as San Buenaventura State Beach, Port Huenene State Beach Park, and Point Mugu State Park in Ventura County; Point Dume State Beach, Will Rogers Beach, Santa Monica State Beach Park, Venice Beach, Manhattan Beach, Cabrillo Beach Park, and Long Beach in Los Angeles County; and Seal Beach, Sunset County Beach, Huntington Beach, Newport Beach, Laguna Beach, and Doheny State Beach in Orange County.⁵ In addition to four national forests, the region contains two national parks—Joshua Tree National Park and the southern portion of Death Valley National Park—as well as several national wildlife refuges including Hopper National Wildlife Refuge in Ventura County; Seal Beach National Wildlife Refuge in Orange County; Havasu National Wildlife Refuge in San Bernardino County; Coachella Valley National Wildlife Refuge in Riverside County, and Sonny Bono Salton Sea National Wildlife Refuge

⁵ GreenInfo Network. 2015. *California Protected Areas: Data Portal*. Available at: <http://www.calands.org/>

in Imperial County.^{6,7} There are 48 California state parks, 268 county parks, and over 3,300 city parks and open space areas in the SCAG region.^{8,9}

Definitions

Definitions of terms used in the regulatory framework, characterization of baseline conditions, and impact analysis for recreation are provided.

Level of Service (LOS): In the context of recreation of service, LOS refers to the amount of “service” each park, open land, trail, or other facility provides to its constituents.¹⁰ Conventional recreation and park LOS analysis—often called the “NRPA standards” method because it was published by the National Recreation and Parks Association (NRPA)—is based on capacity only. NRPA standards suggest providing a certain number of facilities or acres of parkland per 1,000 population. The County of Los Angeles General Plan and Orange County General Plan have established a standard for parklands of four acres of local parkland and six acres of regional parkland per 1,000 county residents in unincorporated areas; the Imperial County General Plan has established a standard of five net acres of overall parkland per 1,000 county residents in unincorporated areas; the San Bernardino County General Plan has established a standard of 14.5 acres of undeveloped lands and/or trails per 1,000 county residents and 2.5 acres of regional parkland per 1,000 county residents; and Ventura County has not established numeric parkland standards. As stated in SCAG’s 2008 Regional Comprehensive Plan, SCAG is encouraging communities to utilize a new paradigm such as composite-values LOS analysis with a ranking from “A” to “F” that takes into account existing open space plans and policies, community preference, accessibility by underrepresented groups and underserved populations, multimodal transportation access (within one-half mile), multifunction open spaces, multiagency initiatives to cover broad geographic areas, and Compass Blueprint areas instead of simply acres of parkland per 1,000 population.¹¹

Local Park: A park that is considered to serve the local community (within a two-mile service radius of the park) is generally 20 acres or less in size.^{12,13} For instance, the Los Angeles County General Plan has refined local parks into the following categories:¹⁴

Park Node: Plazas, rest areas, playgrounds, landmarks, public art installations, etc.

Size: One-quarter acre or less

Service Area: No service radius area

Pocket Park: Passive park amenities including picnic areas and seating areas; and active park amenities including children's play apparatus

Size: Less than three acres

Service Area: Up to one-quarter mile radius of the park

Neighborhood Park: Passive park amenities including informal open play areas, children's play apparatus, group picnic areas with overhead shelters, and barbecues; active park amenities including practice sports fields, basketball, tennis, and volleyball courts; and park facilities including public restrooms, and onsite parking and information kiosks

Size: Three to 10 acres

Service Area: One-half mile radius of the park

Community Park: Passive park amenities including informal open play areas, children's play apparatus, family and group picnic areas with overhead shelters, and barbecues; active sports activities including light sports fields, basketball courts and tennis courts, aquatics complexes, skate parks, soccer arenas, roller hockey, community gardens, and dog parks; and park facilities including public restrooms, concession buildings, community buildings, maintenance buildings, and on-site parking and information kiosks

Size: 10 to 20 acres

Service Area: 1 to 2-mile radius around the park

Regional Park: A park greater than 20 acres in size is generally considered a regional park. A regional park may have a service radius of over 25 miles.^{15,16} For instance, the Los Angeles County General Plan has refined regional parks into the following categories:¹⁷

Community Regional Park: Passive park amenities including open play areas, children's play apparatus, group picnic areas with overhead shelters, and barbecues; active sports activities including lighted sports fields, basketball courts, and tennis courts; additional amenities including multiple sports facilities, aquatics centers, fishing lakes, community buildings, gymnasiums, and scenic views and vistas; and park facilities including public restrooms, concession buildings, community buildings, maintenance buildings, and on-site parking and information kiosks

Size: 20 to 100 acres

Service Area: Up to 20-mile radius around the park

Regional Park: Passive park amenities including group picnic areas with overhead shelters and barbecues; and additional park amenities including lakes, wetlands, auditoriums, water bodies for swimming, fishing and boating, and sports fields

Size: Greater than 100 acres

Service Area: 25-mile or greater radius around the park

Single Use Facility: Passive features including wilderness parks, nature preserves, botanical gardens and nature centers; and active uses including performing arts, water parks, golf driving ranges, and golf courses

Size: No size criteria

Service Area: No assigned service radius area

Trails/Linear Parks: SCAG, Los Angeles County, and San Bernardino County define trails as linear parks that provide community access to increased health and fitness activities in the increasingly urbanized region.

3.16.1 REGULATORY FRAMEWORK

The federal government sets public recreation standards for protection of publicly owned recreation areas; scenic, historic, and recreational trails; national forests, and recreational fisheries from conversion to non-compatible land uses that may include transportation projects through the recreational resource. The state sets recreation standards for protection of public parkland and establishment of new parkland to meet the needs of a growing population as a result of development project. The provision of new parkland and recreational facilities is generally subject to local general plan policies.

Federal

Section 4(f) of the U.S. Department of Transportation Act of 1966 (U.S. DOT Act)

Section 4(f) of the U.S. DOT Act (Public Law 89-670) was enacted as a means of protecting publicly owned public parks, recreation areas, and wildlife/waterfowl refuges as well as historic sites of local, state, or national significance, from conversion to transportation uses.

The provision states that the Secretary of the U.S. DOT may approve a transportation project requiring the use of publicly owned land of a public park, recreation area, or wildlife and waterfowl refuge, or land from an historic site of national, state, or local significance (as determined by the federal, state, or local officials having jurisdiction over the park, recreation area, refuge or site) only if:¹⁸

- There is no feasible and prudent alternative to using that land, and
- The program or project includes all possible planning to minimize harm to the Section 4(f) property.
- or -
- The Section 4(f) use is *de minimis*.

National Trails System Act

The National Trails System Act (Public Law 90-543) was established by Congress in 1968 to establish a network of scenic, historic, and recreational trails. The act defined four categories of national trails: recreation trails, scenic trails, historic trails, and connecting or side trails. Trails within park, forest, and other recreation areas administered by the Secretary of the Interior or the Secretary of Agriculture or in other federally administered areas may be established and designated as “National Recreation Trails” by the appropriate Secretary. Since the National Trails System Act was enacted, the list of qualifying national scenic trails and national historic trails has grown from the initial two trails (the Appalachian National Scenic Trail and Pacific Crest National Scenic Trail) to the current list, which includes 11 national scenic trails and 19 historic trails. In addition, more than 1,000 national recreation trails have been designated nationwide, 91 of which are located in California.

National Forests Land Management Plans

Each of the four Southern California national forests (Cleveland National Forest, Los Angeles National Forest, San Bernardino National Forest, and Los Padres National Forest) is included in the Southern California National Forests Vision. The Southern California National Forests Vision (forest plans) has created individual land management plans for each of the four Southern California national forests. The land management plans include strategic programmatic direction for managing the land in each national forest and its resources for the next 10 to 15 years. The plans include sections on resource management, public use and enjoyment, facilities operation and maintenance, commodity and commercial uses, and fire management.

Executive Order 12962—Recreational Fisheries

The objective of Executive Order 12962, dated June 7, 1995, is the conservation, restoration and enhancement of aquatic systems to provide for increased recreational fishing. Under the executive order, federal agencies shall improve the quantity function, sustainable productivity and distribution of U.S. aquatic resources for recreational fishing opportunities by:

- Developing and encouraging government-private sector partnerships
- Identifying recreational fishing opportunities
- Implementing sound aquatic conservation and restoration practices
- Providing access and promoting awareness
- Supporting outreach programs
- Implementing laws
- Establishing cost-share programs
- Evaluating the effects of federally funded, permitted, or authorized actions on aquatic resources and recreational fishing
- Assisting private landowners to conserve and enhance aquatic resources

State

Quimby Act of 1965

The Quimby Act was established by the California State Legislature in 1965 and codified as California Government Code Section 66477. The Quimby Act allows the legislative body of a city or county, by ordinance, to require the dedication of land or impose a requirement of the payment of fees in lieu thereof, or a combination of both, for park or recreational purposes as a condition to the approval of a tentative tract map or parcel map. Under the Quimby Act, requirements for parkland dedications are not to exceed three acres of parkland per 1,000 persons residing within a subdivision, and in-lieu fee payments shall not exceed the proportionate amount necessary to provide three acres of parkland, unless the amount of existing neighborhood and community parkland exceeds that limit.

California Public Park Preservation Act of 1971

The California Public Park Preservation Act of 1971 (Public Resources Code Section 5400-5409) states that any public agency that acquires public parkland must either continue to operate the property as a public park, or, must pay compensation or land that is sufficient to acquire substantially equivalent substitute parkland and facilities or provide substitute parkland of comparable characteristics. The Act is the primary legislation for protecting and preserving public parkland.

California Recreational Trails Plan of 2002

The California Department of State Parks (California State Parks) is a trustee agency that owns and operates all state parks and participates in land use planning that affects state parklands. Pursuant to California Public Resources Code Section 5070, the California Recreational Trails Act, California State Parks has prepared the California Recreational Trails Plan in 1978, which was updated in 2002, with

reports highlighting progress on the plan that are submitted to the State Legislature every two years.¹⁹ The California Recreational Trails Plan establishes 12 designated trail corridors that pass through the SCAG region with the intent of forming a statewide trail system that links mountain, valley, and coastal communities to recreational, cultural, and natural resources throughout the state.²⁰

Regional

County and City General Plans

The most comprehensive land use planning, including that for recreational facilities, in the SCAG region is provided by county and city general plans, which local governments are required by state law to prepare as a guide for future development. The SCAG region spans six counties and 191 cities, all of which have general plans containing policies related to provision of recreational resources. Open space and recreation resources are normally addressed in two mandatory elements of the general plan: land use and open space. The land use element normally focuses on the distribution of recreation facilities and programs and an inventory of open space land, including those lands that provide opportunities for recreational activities. In contrast, the open space element focuses on open space for outdoor recreation including, but not limited to:

- Areas of outstanding scenic, historical, and cultural value
- Areas particularly suited for park and recreational purposes, including access to lakeshores, beaches, and rivers and streams
- Areas that serve as links between major recreational and open-space reservations, including utility easements, banks of rivers and streams, trails, and scenic highway corridors

The six county general plans address the majority of the regional open space, beyond that provided by the national forest, national parks, and wildlife refuges:

- **Ventura County:** Resources Appendix²⁹ and Public Services and Facilities Appendix³⁰ of County General Plan and Open Space and Recreation Elements of City General Plans

Each city in the SCAG region has its own respective general plan that helps provide guidance for the growth and development of the city and contains measures to maintain and/or enhance open space within each of the cities jurisdictions. Each city's general plan varies in level of detail and necessary measures to preserve open space. Although city general plans are not required to contain parks and recreation sections, cities often choose to include this section to provide measures to maintain and/or enhance city parks and recreation areas.

Additional plans and ordinances at the master plan level, city-level, and specific plan level may also apply within the SCAG region.

Zoning

City and county zoning codes provide the set of detailed requirements that implement general plan policies at the level of the individual parcel. Zoning codes present standards for different uses and identifies which uses are allowed in the various zoning districts of the jurisdiction. Since 1971, state law has required the city or county zoning code to be consistent with the jurisdiction's general plan.

3.16.2 EXISTING CONDITIONS

This section provides the environmental setting for the discussion of recreation in the SCAG region, which encompasses an area of more than 38,000 square miles within the counties of Los Angeles, Orange, San Bernardino, Riverside, Ventura, and Imperial. This vast area includes millions of acres of open space and recreational land and a population close to 19 million people.³¹ This section includes information on the following baseline conditions of the existing regional recreation parks and open space and community, neighborhood and local parks in the SCAG region.

Regional and Local Parks and Recreation Facilities

Community open space includes all forms of open space in or serving the needs of people in the region's communities. Community open space traditionally has meant parks and other recreation areas that are located in or near enough to serve local communities. In today's region, community open space includes community gardens, dedicated natural lands, urban forests, greenbelts, trail systems, and bikeways. This new mix of community open spaces is the product of interrelated planning decisions on a local and regional level and a reflection of new and old needs of the region's communities.

There are over 1.4 million acres of land of existing protected open space areas, regional parks, recreation facilities, and local parks in the SCAG region (Table 3.16.2-1, *Recreational Areas and Protected Open Space by County in Acres*; and Figure 3.16.2-1, *Regional and Local Recreation and Open Space*). The SCAG region is home to the Angeles National Forest, the first national forest in California and the second in the nation, hosting in excess of 4 million visitors per year, making it one of the most visited national forests in the nation. The SCAG region is also home to Griffith Park, one of the nation's most popular urban parks, with more than 12 million users annually.³²

³¹ SCAG projections for 2020 indicate a population total of 19,390,870.

A vast amount of the SCAG region is covered by open space, including four national forests and several thousand acres of undeveloped local and regional parks, all of which are used for passive recreation in the region. Each of the six counties in the SCAG region has a recreation element and/or an open space element within its general plan that emphasizes the importance of passive and active recreation and its benefits to the communities within each county. Federal, state, and county recreation facilities are used to promote community health. Examples of these programs include the Policies for Livable, Active Communities and Environments (PLACE) Program in Los Angeles County, which promotes the development of healthy, safe, and active environments for Los Angeles County residents;³³ and the Partnership for a Healthy Ventura County, which is a collaboration between the Ventura County Department of Public Health and the Ventura County Parks and Recreation Department and the community members served by the departments.³⁴ Programs similar to these exist throughout the SCAG region and some of the additional 191 cities in the SCAG region have parallel programs utilizing recreation facilities to promote healthy activities.

There are four national forests, two national parks, and 48 California State Parks in the SCAG region, ranging from 24 state parks in Los Angeles County to two state parks in Imperial County.³⁵ There are 268 county parks in the SCAG region, with 14 in Imperial County,³⁶ 177 in Los Angeles County,³⁷ 36 in Orange County,³⁸ eight in Riverside County,³⁹ 10 in San Bernardino County,⁴⁰ and 23 in Ventura County.⁴¹ The

multitude of Specimen Gardens and Arboreta in the region include the Cal State University Northridge Botanic Garden, Chavez Ravine Arboretum, Descanso Gardens, Huntington Botanical Gardens, Los Angeles County Arboretum and Botanic Garden, Meldred E. Mathias Botanical Garden, Rancho Santa Ana Botanic Garden, John R. Rodman Arboretum, South Coast Botanic Garden, and Wrigley Botanical Gardens in Los Angeles County; the Fullerton Arboretum and Sherman Library and Gardens in Orange County; the College of the Desert Arboretum, Living Desert Zoo and Gardens, Moorten Botanical Garden and Cactarium, and University of California Riverside Botanic Gardens in Riverside County; and Conejo Valley Botanical Garden in Ventura County.⁴²

As established by the Parks and Recreation Element of the Los Angeles County General Plan 2035 Update and the Recreation Element of the Orange County General Plan, the standard for parklands is four acres of local parkland and six acres of regional parkland per 1,000 county residences in unincorporated areas of the Los Angeles and Orange Counties;^{43,44} the Parks and Recreation Element of the Imperial County General Plan has established a standard of five net acres of overall parkland per 1,000 county residents in unincorporated areas;⁴⁵ the Open Space Element of the San Bernardino County General Plan has established a standard of 14.5 acres of undeveloped lands and/or trails per 1,000 county residents and 2.5 acres of regional parkland per 1,000 county residents;⁴⁶ and Riverside and Ventura Counties have not established numeric parkland standards.^{47,48} Los Angeles County is home to over half of the population in the SCAG region. Despite the over 14 million acres designated for open space and park and recreation uses, there remains a deficiency of such lands in large areas of the SCAG region. Based on the *Complete Findings for the Survey on Public Opinions and Attitudes on Outdoor Recreation in California 2012*, the California State Parks determined that the Southern California region has a high demand for picnicking, unpaved trails, and pool and beach facilities and activities, demonstrating a future need for trails and swimming facilities.⁴⁹

⁴⁹ California State Parks. Accessed 14 September 2015. *Complete Findings for the Survey on Public Opinions and Attitudes on Outdoor Recreation in California 2012: An Element of the California Outdoor Recreation Planning Program*. Available at: <http://www.parks.ca.gov/pages/795/files/2012%20sopa.pdf>

All 191 cities in the SCAG region have general plans that contain an open space element. Within these open space elements are measures for the protection and enhancement of existing open space in each respective city. In addition to the open space elements, several cities have elements within their general plans that address local parks and recreation. These elements contain measures and policies for the protection and enhancement of city parks and facilities.

Based on the acres of recreational areas and publicly accessible protected open space (shown in **Table 3.16.2-1**), local parkland standards established within county and city general plans, and the 2014 population in each county, there is a deficiency in local parkland in the two counties of the SCAG region that have local parkland standards (Los Angeles and Orange Counties), a surplus in regional parkland and publicly accessible protected open space in the three counties of the SCAG region that have regional parkland standards (Los Angeles, Orange, and San Bernardino Counties), and a surplus in Imperial County, which has a combined local and regional parkland standards (**Table 3.16.2-2, *Recreation and Open Space Surpluses and Deficiencies by County***).

Public parks and open space serve all residents in the SCAG region. Different types of parks are found throughout the SCAG region including regional parks, community arboretums, designated open spaces, national parks, and local parks. However, the existing parks are not located in an equal distribution throughout the SCAG region. Some areas in the SCAG region have more open space and higher densities of city parks than others. The integration of an effective regional transportation system as proposed in the SCAG 2016 RTP/SCS would allow residents from any area within the SCAG region to have improved access to the many parks available to visit in the region. Improvements to the regional transportation system would improve public access to parks and open space, which, alongside reductions in greenhouse gases and improvements in air quality would contribute to the overall health and well-being of the residents in the SCAG region.

**TABLE 3.16.2-2

Linear facilities (such as trails and greenbelts) and large regional recreational areas may serve several neighborhoods but are also a unique amenity for the entire area.⁵⁰ Approximately 85 percent of Californians live within 10 miles of the 27 designated Trail Corridors of the California Recreational Trails

⁵⁰ Governor’s Office of Planning and Research. Accessed 14 September 2015. *State of California General Plan Guidelines 2003*. Available at: http://opr.ca.gov/docs/General_Plan_Guidelines_2003.pdf

Plan, which provide both regional and local recreation opportunities.⁵¹ The California Recreational Trails Plan establishes the following designated Trail Corridors that pass through the SCAG region with the intent of forming a statewide trail system that links mountain, valley, and coastal communities to recreational, cultural, and natural resources throughout the state:⁵²

- **Backbone Trail Corridor** (from Pacific Coast Highway at Thornhill Broome Beach in Ventura County through the Santa Monica Mountains to Pacific Coast Highway at Will Rogers State Historic Park in Los Angeles County)⁵³
- **California Coastal Trail Corridor** (from the California-Mexico border northwest along the California coastline through Orange, Los Angeles, and Ventura Counties to the California-Oregon border)
- **California Desert Trail Corridor** (from the California-Mexico border through Imperial, Riverside, and San Bernardino Counties into Nevada)
- **Condor Trail Corridor** (from the Los Angeles–Ventura County line at the Santa Clarita River west through Ventura County into Santa Barbara County)
- **Cuesta to Sespe Trail Corridor** (through the southern section of the Los Padres National Forest from the Cuesta Grade north of San Luis Obispo southeast through Ventura County to the end of the Sespe River outside of Filmore at Highway 126)
- **Juan Bautista de Anza (National Historic) Trail Corridor** (from the San Francisco Bay Area southeast through Ventura, Los Angeles, San Bernardino, Riverside, San Diego, and Imperial Counties to the California-Mexico border)
- **Los Angeles River Trail Corridor** (from Long Beach harbor in Los Angeles County north along the Los Angeles River corridor to Pacific Crest Trail in the Angeles National Forest)
- **Pacific Crest (National Scenic) Trail Corridor** (from Canada south through Washington State, Oregon, into California, through Los Angeles, San Bernardino, Riverside, and San Diego Counties into Mexico)
- **Rim of the Valley Trail Corridor** (a loop corridor from the foothills of the San Gabriel Mountains in Los Angeles County through the Santa Susana Mountains into Ventura County south to the Santa Monica Mountains in Los Angeles County and east near Mulholland Parkway to downtown Los Angeles, then north through Pasadena back into the foothills in La Canada Flintridge)
- **San Gabriel River Trail Corridor** (from Alamitos Bay in Los Angeles County northeast along the San Gabriel River corridor to Pacific Crest Trail in the Angeles National Forest)
- **Santa Ana River Trail Corridor** (from Balboa in Orange County northeast along the Santa Ana River corridor through Riverside and San Bernardino counties to the Pacific Crest Trail in the San Bernardino National Forest)
- **Santa Clara River Trail/Parkway** (from the South Forks Trail in Ventura County east along the Santa Clara River to the community of Newhall in Los Angeles County)

Other local trails that are maintained by cities and counties include Schabarum-Skyline Trail (Los Angeles County Department of Parks and Recreation),⁵⁴ Bayview Trail, Upper Newport Bay Nature Preserve (Orange County Parks),⁵⁵ Victoria Avenue Bike Trail (City of Riverside, Riverside County),⁵⁶ Orange Blossom Bike Trail (City of Redlands, San Bernardino County),⁵⁷ and Ojai Valley Trail (Ventura County Parks Department).⁵⁸ There are at least 365 county-maintained trails⁵⁹ and several city-maintained trails in Los Angeles County, but no existing local maintained trails in Imperial County, where trails within the County are located within state and federal parks.

3.16.3 THRESHOLDS OF SIGNIFICANCE

The potential for the 2016 RTP/SCS to result in significant impacts related to recreation was analyzed in relation to the two questions contained in Appendix G of the State CEQA Guidelines. The Plan would be considered to have the potential for significant impacts if it would:

- Increase the use of existing neighborhood and regional parks or other recreational facilities such that substantial physical deterioration of the facility would occur or be accelerated.
- Include recreational facilities or require the construction or expansion of recreational facilities which might have an adverse physical effect on the environment.

Methodology

The 2016 RTP/SCS lists transportation projects and includes strategies for integrating land use development patterns with transportation investments that emphasize system preservation and enhancement, active transportation, mode choices, accessibility, and mobility. These land use distribution patterns are designed to accommodate the region's growth projections. The Regional Travel Demand Model (RTDM) used for this analysis captures pass-through traffic that does not have an origin or destination in the region, but does impact the region, so that too is included in the project analysis. Although population growth and development are anticipated to occur even without the 2016 RTP/SCS, this Plan includes regional land use growth policies and strategies that would likely influence growth, including distribution patterns, throughout the region. To address this, the analysis in this PEIR covers overall region-wide impacts of major transportation projects listed in the Plan and land development strategies described in the 2016 RTP/SCS.⁶⁰

⁶⁰ Major Transportation Projects include but are not limited to projects that involve ground disturbing activities and projects outside of existing rights-of-way such as projects that require new rights-of-way, adding traffic lanes, and grade separation.

The methodology for determining the significance of recreation impacts compares the existing conditions to future (2040) conditions, as required in CEQA Section 15126.2(a). This analysis evaluates the potential for significant impacts of the 2016 RTP/SCS to recreation in accordance with Appendix G of the State CEQA Guidelines and guidelines established by the Bureau of Land Management (BLM); California Department of Parks and Recreation; and Ventura, Los Angeles, Orange, San Bernardino, Riverside, and Imperial Counties.

To assess potential impacts to recreation within the SCAG region, a geographic information system (GIS) was used to analyze whether major highway, transit, and freight rail projects documented in the 2016 RTP/SCS would directly impact existing recreation resources. Baseline conditions were established for the acreage of local and regional parkland per 1,000 population in each county to determine existing park level of service, and the 2040 anticipated population growth forecast was used to calculate the quantity of parkland needed to meet future recreation needs. The results of the GIS analysis determine whether major transportation projects included in the Plan could directly affect existing local and regional parkland in the SCAG region. Indirect impacts were evaluated based on the land development patterns after a review of the Plan's land use strategies, as well as the assumptions that protected recreation areas (such as national forests) would remain protected and new development would be discouraged in natural habitat areas and be redirected away from high value habitat areas to be concentrated in existing urbanized areas such as high-quality transit areas (HQTAs) (near transit projects) and urban opportunity areas, as well as existing suburban town centers.

3.16.4 IMPACT ANALYSIS

IMPACT REC-1. Potential to increase the use of existing neighborhood and regional parks or other recreational facilities such that substantial physical deterioration of the facility would occur or be accelerated.

Significant Impact

Implementation of the transportation projects and land use patterns anticipated by the strategies in the 2016 RTP/SCS would have the potential to increase the use of existing neighborhood and regional parks or other recreational facilities such that substantial physical deterioration of the facilities would occur or be accelerated, constituting a potentially significant impact. The 2016 RTP/SCS provides transportation improvements to accommodate the anticipated population increase of approximately 3.8 million persons from 2014 to 2040, over the 25-year planning horizon. The 2016 RTP/SCS would encourage new growth in urbanized areas such as HQTAs and other livable corridors and neighborhood mobility areas sometimes within the HQTAs above their existing planned density levels; therefore, it would be expected to result in increased use of existing neighborhood parks and other recreational facilities such that substantial physical deterioration facilities may be anticipated. Regional parks have a service area of a 1-hour driving distance; therefore, the distribution of density would likely remain within the service area, and these parks would not experience an accelerated rate of deterioration of facilities. Based on the assumption that a 1-hour drive would provide access to regional parks within a 45-mile radius around HQTAs, most of the SCAG region is adequately served (**Figure 3.16.4-1, *Regional Recreation and Open Space Areas within a 45-Mile Radius of 2040 HQTAs***, and **Table 3.16.4-1, *Acres of Regional Recreation and Open Space Areas within a 45-Mile Radius of HQTAs in 2040***).

Park accessibility is defined in the 2016 RTP/SCS as the percentage of park acreage reachable within a 45-minute travel time via (1) automobile, (2) local bus, and (3) all travel options. Los Angeles County and Orange County have identified an existing deficiency in local parkland per 1,000 persons that would have the potential to be directly exacerbated by the increased use of designated local parks and recreational facilities in HQTAs, based on the assumption that a 45-minute drive would provide access to regional parks within a 30-mile radius around HQTAs, most of the SCAG region is adequately served by regional parks (Figure 3.16.4-2, *Local Recreation and Open Space within a 30-Mile Radius of 2040 HQTAs*, and Table 3.16.4-2, *Acres of Local Recreation and Open Space Areas within a 30-Mile Radius of HQTAs in 2040*).

⁸GreenInfo Network. Accessed 16 November 2015. *California Protected Areas Data Portal*. Available at: <http://www.calands.org/>

Accessibility to parks is a public health concern and is addressed under Environmental Justice in the 2016 RTP/SCS.⁶¹ Urbanized areas, such as the communities of Westlake and Southeast Los Angeles in the City of Los Angeles, are significantly park poor, with less than half an acre of park space per 1,000 residents, many of which are also low-income areas.⁶² Construction of transportation projects as well as development in underutilized urban (opportunity) areas and edges of the existing urbanized areas that would be anticipated as a result of land use strategies of the Plan would have a potential to impact open spaces and recreational lands (and possibly recreational facilities), through the acquisition of land and development of transportation projects and urban uses. These activities would have the potential to further increase the use at remaining facilities and reduce the ratio of parks-to-people in these areas.

⁶¹ This Draft PEIR does not analyze environmental justice. However, environmental justice is an important subject to the region and is analyzed in the Draft Plan (2016 RTP/SCS) and the associated Environmental Justice Appendix.

⁶² Los Angeles Department of City Planning. March 2015. *Plan for a Healthy Los Angeles: A Health and Wellness Element of the General Plan*. Available at: <http://planning.lacity.org/cwd/gnlpln/PlanforHealthyLA.pdf>

Except for the High Speed Rail (HSL) projects, which would impact open space in Los Angeles County, potentially including underground portions of the Angeles National Forest, the majority of transit and roadway improvements included in the 2016 RTP/SCS are generally located in urbanized areas, and therefore, are not likely to result in direct significant impacts to vacant/undisturbed lands or large tracts of land designated as open space. Additionally, transportation projects included in the Plan that could result in potentially significant impacts to recreational facilities would include closures to gaps in the highway network through areas that currently serve as open space lands, closures to gaps in the high-occupancy vehicle (HOV) lane network and the addition of freeway-to-freeway direct HOV connectors, and a connected network of express/high-occupancy toll (HOT) lanes.

Section 2.0, *Project Description*, of this PEIR also describes land use strategies. These strategies would target growth in urbanized areas such as HQTAs that provide walkable, bikeable, and/or transit-oriented land patterns. Under the 2016 RTP/SCS, although HQTAs account for only 3 percent of total land areas, they would and are projected to accommodate 46 percent of the region's future household growth and 50 percent of the future employment growth,⁶³ with the remainder of the new growth located outside the HQTAs, possibly on previously vacant/undeveloped urban land, open space and recreational lands, or farmland. Many of the urbanized areas in the SCAG region are currently deficient in local park space.^{64,65} Although land use strategies included in the Plan encourage additional parks and other regional and local biking and walking amenities, many of the areas where density would be expected to increase would be areas without sufficient park space, resulting in increased use and deterioration of existing neighborhood and regional parks.

However, this analysis should be read together with the Plan's strategies for active transportation, including expansion of regional greenway network, regional and local bikeway network, and short-trip strategies to improve sidewalk quality and use complete street to roadway improvements. These strategies that are integrated with land use pattern such as HQTAs, livable corridors, neighborhood mobility areas, as well as with innovative technologies such as neighborhood electric vehicles. While the 2016 RTP/SCS has the potential to result in a significant impact on existing neighborhood and regional parks or other recreational facilities, it includes strategies to create new neighborhood and regional recreational facilities and opportunities.

Implementation of the transportation projects and land use patterns anticipated by the strategies in the 2016 RTP/SCS would have the potential to increase the use of existing neighborhood and regional parks or other recreational facilities such that substantial physical deterioration of the facilities would occur or be accelerated, constituting a potentially significant impact requiring the consideration of mitigation measures.

⁶³ Southern California Association of Governments. 5 November 2015. *Item No. 1 Staff Report: Draft 2016-2040 Regional Transportation Plan/Sustainable Communities Strategy (2016 RTP/SCS) – Proposed Major Components*. Available at: <http://www.scag.ca.gov/committees/CommitteeDocLibrary/jointRCPC110515fullagn.pdf>

⁶⁴ In 2015, The Trust for Public Land's survey of parks within the 100 most populous U.S. cities calculated that the percent of population with walkable park access was only 45.2 percent in the City of Riverside, 54.1 percent in the City of Los Angeles, 59.7 percent in the City of Anaheim, 69.6 percent in the City of Santa Ana, and 79.5 percent in the City of Long Beach.

⁶⁵ The Trust for Public Land. Accessed 16 November 2015. *2015 City Park Facts*. Available at: https://www.tpl.org/sites/default/files/files_upload/2015-City-Park-Facts-Report.pdf

IMPACT REC-2. Potential to include recreational facilities or require the construction or expansion of recreational facilities which might have an adverse physical effect on the environment.

Significant Impact

Implementation of the transportation projects and land use patterns anticipated by the strategies in the 2016 RTP/SCS would have the potential to include recreational facilities or require the construction or expansion of recreational facilities which might have an adverse physical effect on the environment, constituting a potentially significant impact. The 2016 RTP/SCS includes linear recreation facilities, such as a regional greenway network, a regional bikeway network, and local bikeway networks, the construction of which might have an adverse physical effect on the environment.

However, the Plan encourages increased residential and commercial development in HQTAs that may necessitate the construction or expansion of recreation facilities within or in nearby accessible locations to the HQTAs, which are typically urban areas. Development of recreation facilities in urban areas normally converts underutilized or blighted property to the benefit of the community and would not be expected to have an adverse physical effect on the environment.⁶⁶

As discussed in **Section 3.14, *Population, Housing, and Employment***, the total population in the SCAG region is expected to increase by approximately 3.6 million persons from 2014 to 2040, independent of the projects considered in the 2016 RTP/SCS. However, the land use development pattern of the 2016 RTP/SCS assumes a significant increase in small-lot, single- and multi-family housing that is expected to mainly occur in infill locations near transit infrastructure (HQTAs and transit priority areas [TPAs]), which are typically urban areas. Park development and expansion in urban areas is normally beneficial, although there may be limited instances where impacts will occur during construction of the park. As there is a potential for the linear recreational facilities considered in the Plan to result in adverse physical effects on the environment, impacts in regard to the construction or expansion of recreational facilities which might have an adverse physical effect on the environment would be significant, and consideration of mitigation measures is required.

3.16.5 CUMULATIVE IMPACTS

IMPACT REC-1. Potential to increase the use of existing neighborhood and regional parks or other recreational facilities such that substantial physical deterioration of the facility would occur or be accelerated.

Significant Cumulative Impact

Implementation of the 2016 RTP/SCS would have the potential to contribute cumulative impacts in regard to the increased use of existing neighborhood and regional parks or other recreational facilities such that substantial physical deterioration of the facilities would occur or be accelerated. Overall, the impacts to recreation facilities and open space as a result of the transportation projects and anticipated

⁶⁶ National Trails Training Partnership. Accessed 26 October 2015. *Impacts of Trails and Trail Use*. Available at: <http://www.americantrails.org/resources/adjacent/sumadjacent.html>

development potentially influenced by the 2016 RTP/SCS would increase the need for local parkland within HQTAs and would be expected to incrementally contribute to indirect cumulative impacts to recreation facilities in regard to the accelerated substantial deterioration of existing facilities and, in combination with other projects in the SCAG region.

IMPACT REC-2. Potential to include recreational facilities or require the construction or expansion of recreational facilities which might have an adverse physical effect on the environment.

Significant Cumulative Impact

Implementation of the 2016 RTP/SCS would also have the potential to require the construction or expansion of recreational facilities, constituting a potentially significant cumulative impact. In combination with other projects in the SCAG region, implementation of the 2016 RTP/SCS would indirectly contribute (through population growth in areas with insufficient park access) to a deficiency in local/neighborhood parkland that would require the construction or expansion of recreational facilities which may have an adverse physical effect on the environment, requiring the consideration of mitigation measures.

3.16.6 MITIGATION MEASURES

Mitigation measures as they pertain to each CEQA question related to recreation are described below. Mitigation measures are categorized into two categories: SCAG mitigation and project-level mitigation measures. SCAG mitigation measures shall be implemented by SCAG over the lifetime of the 2016 RTP/SCS. Project-level mitigation measures can and should be implemented by the Lead Agency for transportation and development projects, as applicable and feasible.

IMPACT REC-1. Potential to increase the use of existing neighborhood and regional parks or other recreational facilities such that substantial physical deterioration of the facility would occur or be accelerated.

SCAG Mitigation Measures

MM-REC-1(a)(1): SCAG shall facilitate reducing future impacts as a result of increased use of existing neighborhood and regional parks or other facilities from population growth through cooperation with member agencies, information sharing, and program development in order to ensure consistency with planning for expansion of and new neighborhood parks within or in nearby accessible locations to HQTAs in funding opportunities and programs administered by SCAG. Lead Agencies, such as county and city planning departments, shall be consulted during this process.

MM-REC-1(a)(2): SCAG shall work with local jurisdictions to facilitate planning freeway caps, which are decks built over freeway trenches to create new public spaces, by continuing to provide technical assistance and planning support through its Sustainability Program for freeway cap planning projects and other adaptive urban park planning activities. SCAG shall make past documentation on freeway cap

plans available on SCAG's Sustainability Program website to serve as examples for future freeway cap planning projects and activities.

Project-Level Mitigation Measures

MM-REC-1(b): Consistent with the provisions of Section 15091 of the State CEQA Guidelines, SCAG has identified mitigation measures capable of avoiding or reducing the significant effects on the integrity of recreation facilities, particularly neighborhood parks in the vicinity of HQTAs, that are within the jurisdiction and responsibility of other public agencies and/or Lead Agencies. Where the Lead Agency has identified that a project has the potential for significant effects, the Lead Agency can and should consider mitigation measures capable of avoiding or reducing significant impacts on the use of existing neighborhood and regional parks or other recreational facilities to ensure compliance with county and city general plans and the Quimby Act, as applicable and feasible. Such measures may include the following, or other comparable measures identified by the Lead Agency:

- Prior to the issuance of permits, where projects require the construction or expansion of recreational facilities or the payment of equivalent Quimby fees, consider increasing the accessibility to natural areas and lands for outdoor recreation from the proposed project area, in coordination with local and regional open space planning and/or responsible management agencies.
- Prior to the issuance of permits, where projects require the construction or expansion of recreational facilities or the payment of equivalent Quimby fees, encourage patterns of urban development and land use which reduce costs on infrastructure and make better use of existing facilities, using strategies such as:
 - Increasing the accessibility to natural areas for outdoor recreation
 - Promoting infill development and redevelopment to revitalize existing communities
 - Utilizing "green" development techniques
 - Promoting water-efficient land use and development
 - Encouraging multiple uses
 - Including trail systems and trail segments in General Plan recreation standards
- Prior to the issuance of permits, where construction and operation of projects would require the acquisition or development of protected open space or recreation lands, demonstrate that existing neighborhood parks should be expanded or new neighborhood parks developed such that there is no net decrease in acres of neighborhood park area available per capita in the HQTA.
- Where construction or expansion of recreational facilities is included in the project or required to meet public park service ratios, require implementation of Mitigation Measures MM-AES-1(b), MM-AES-3(b), MM-AES-4(b), MM-AF-1(b), MM-AF-2(b), MM-BIO-1(b), MM-BIO-2(b), MM-BIO-3(b), MM-CUL-1(b), MM-CUL-2(b), MM-CUL-3(b), MM-CUL-4(b), MM-GEO-1(b), MM-GEO-1(b), MM-HYD-1(b), MM-USS-3(b), MM-USS-4(b), and MM-USS-6(b) to avoid or reduce significant environmental impacts associated with the construction or expansion of such facilities, through the imposition of conditions required to be followed to avoid or reduce impacts associated with air quality, noise, traffic, biological resources, greenhouse gas emissions, hydrology and water quality, and others that apply to specific construction or expansion of new or expanded public service facilities.

IMPACT REC-2. Potential to include recreational facilities or require the construction or expansion of recreational facilities which might have an adverse physical effect on the environment.

SCAG Mitigation Measures

MM-REC-2(a): SCAG shall facilitate reducing future impacts as a result of the construction or expansion of recreational facilities which might have an adverse physical effect on the environment through cooperation with member agencies, information sharing, and program development in order to ensure consistency with planning for construction and expansion of parks to minimize adverse physical effects on the environment in funding opportunities and programs administered by SCAG. Lead Agencies, such as county and city planning departments, shall be consulted during this update process.

Project-Level Mitigation Measures

See MM-REC-1(b).

3.16.7 LEVEL OF SIGNIFICANCE AFTER MITIGATION

IMPACT REC-1. Potential to increase the use of existing neighborhood and regional parks or other recreational facilities such that substantial physical deterioration of the facility would occur or be accelerated.

The implementation of mitigation measures MM-REC-1(a)(1), MM-REC-1(a)(2), MM-REC-1(a)(3), MM-REC-1(a)(4), and MM-REC-1(b) would reduce impacts related to the increased use of existing neighborhood parks and recreational facilities in the HQTAs where almost half of the new growth that is forecasted to occur in the region in the next 25 years under the regional land use strategies included in the 2016 RTP/SCS. However, because only two of the six counties in the SCAG region have established local parkland standards, and due to the large volume of transportation projects in the Plan that could occur over time and in large geographic areas and anticipated more compact development in the region, it is possible that impacts to recreational lands would not be mitigated in every instance, and the direct, indirect, and cumulative impacts would remain significant and unavoidable.

IMPACT REC-2. Potential to include recreational facilities or require the construction or expansion of recreational facilities which might have an adverse physical effect on the environment.

The implementation of mitigation measures MM-REC-2(a) and MM-REC-1(b) would reduce impacts related to the construction or expansion of recreational facilities which might have an adverse physical effect on the environment. However, because approval of projects is at the discretion of the Lead Agency, who can provide a variance that allows for overriding considerations, it is possible that impacts to recreational lands would not be mitigated in every instance, and the direct, indirect, and cumulative impacts would remain significant and unavoidable.

TRANSPORTATION, TRAFFIC, AND SAFETY

This section of the Program Environmental Impact Report (PEIR) describes transportation, traffic, and safety in the SCAG region; discusses the potential impacts of the proposed 2016-2040 Regional Transportation Plan/Sustainable Communities Strategies (“2016 RTP/SCS,” “Project,” or “Plan”) on transportation, traffic, and safety; identifies mitigation measures for the impacts; and evaluates the residual impacts. Transportation and traffic were evaluated consistent with Appendix G of the 2015 State California Environmental Quality Act (CEQA) Guidelines. The SCAG RTP/SCS PEIR addresses environmental impacts for the 2016 RTP/SCS transportation network including transportation: active transportation, aviation and airport ground access, corridor planning, goods movement, high speed rail, intelligent transportation systems, safety and security, transit, and transportation finance within the SCAG region. Transportation, traffic, and safety within the SCAG region were evaluated at a programmatic level of detail, in relation to the 2016 RTP/SCS and the Circulation or Transportation Element of the General Plans of the six counties and 191 cities within the SCAG region; a review of Congestion Management Plans for the SCAG Region, California Transportation Plan by Caltrans, and related literature germane to the SCAG region, as well as a review of the 2012 SCAG RTP/SCS PEIR.

The Southern California transportation system is a complex intermodal network designed to carry both people and goods. It consists of roads and highways, public transit, paratransit, bus, rail, airports, seaports, and intermodal terminals. The regional highway system consists of an interconnected network of local streets, arterial streets, freeways, carpool lanes, and toll roads. This highway network allows for the operation of private autos, carpools, private and public buses, and trucks. Active transportation modes, such as bicycles and pedestrians, share many of these facilities. The regional public transit system includes local shuttles, municipal and area-wide public bus operations, rail transit operations, regional commuter rail services, and interregional passenger rail service. The freight railroad network includes an extensive system of private railroads and several publicly owned freight rail lines serving industrial cargo and goods. The airport system consists of commercial, general, and military aviation facilities serving passenger, freight, business, recreational, and defense needs. The region’s seaports support substantial international and interregional freight movement and tourist travel. Intermodal terminals consisting of freight processing facilities, which transfer, store, and distribute goods. The transportation system supports the region’s economic needs, as well as the demand for personal travel.

Transit use is growing in the SCAG region. As of 2012, transit agencies in the SCAG region reported 716 million boarding. This represents growth of nearly 26 percent since 1991, but roughly 6 percent below the high point in 2008.¹

¹ Southern California Association of Governments. June 2015. *Fiscal Year 2011-12 Transit System Performance Report*.

Definitions

California Transportation Plan (CTP): This is a statewide, long-range transportation plan to meet future mobility needs and reduce greenhouse gas emissions.² The CTP defines performance-based goals, policies, and strategies to achieve the collective vision for California's future, statewide, integrated, multimodal transportation system.

Congestion Management Plan (CMP): This is a State-mandated program enacted by the State legislature to address the increasing concern that urban congestion is affecting the economic vitality of the State and diminishing the quality of life in some communities. The CMP provides the analytical basis for transportation decisions through the State Transportation Improvement Program.

Congestion Management Agency (CMA): A CMA is a county-wide body comprising of local elective officials within a County that administers the CMP to keep traffic levels manageable. In the past, state gas tax revenue had historically been used to fund road and highways. With the passage of Proposition 111 in the 1990s, state gas tax and directed revenue are provided to fund road, bicycle, pedestrian, and public transit projects in addition to highways to help manage congestion for multi-modal purposes. CMA is charged with coordinating land use, air quality, and transportation planning among the local jurisdictions, including monitoring the levels of congestion on major roads and analyzing the impacts that a proposed development will have on future traffic congestion.

Goods Movement: Refers to the transportation of for-sale products from the location of their manufacture or harvest to their final retail destination.

Level of Service (LOS): In the context of traffic analysis, this is a measure used to relate the quality of traffic service. LOS is used to analyze highways by categorizing traffic flow and assigning quality levels of traffic based on performance measures such as speed and density.

Million Annual Passengers (MAP): Number of people taking public transit, airline flight, bus, or train calculated expressed in the unit of 100,000 in terms of boarding counts.

Peak Hour: The part of the day during which traffic congestion on roads and crowding on public transport is at its highest.

Safety: Protection of persons and property from unintentional damage or destruction caused by accidental or natural events.

Transportation Demand Management (TDM): Strategies and actions directed at influencing the mode, frequency, time, route, or length of travel in order to maximize the efficiency and sustainable use of transportation facilities. TDM strategies typically include providing information on travel choices; managing parking, marketing and communications, financial incentives, and disincentives; providing and operating facilities that make the use of non-solo driving more attractive; and encouraging telework and flexible work strategies.

² California Department of Transportation. April 2013. *California Transportation Plan 2040: Fact Sheet*.

Transportation System Management (TSM): Transportation system management refers to a set of strategies that largely aim to reduce greenhouse gas (GHG) emissions by reducing congestion, primarily by improving transportation system capacity and efficiency. TSM strategies may also address a wide range of other externalities associated with driving such as pedestrian/driver safety, efficiency, congestion, travel time, and driver satisfaction. Some TSM strategies are designed to reduce total and systemic congestion and improve system-wide efficiency, while other strategies target particularly problematic areas where improvements could greatly affect congestion, safety, efficiency, and GHG emissions.

Vehicle Miles Traveled (VMT): The number of VMT provides an indicator of the travel levels of the roadway system by motor vehicles in a given time period. This number is estimated based upon traffic volume counts and roadway length.

3.17.2 Regulatory Framework

This regulatory framework focuses on the federal, State, and local statutes and regulations where the primary objective is improvement of transportation systems, standards, and travel demand measures. However, there are other regulations that are focused on increased energy efficiency and reduction of greenhouse gas emissions, that if accomplished would be expected to contribute to improvement in traffic levels. Those regulations have been addressed respectively in Section 3.6, *Energy*, and Section 3.8, *Greenhouse Gas Emissions and Climate Change*.

Federal

Federal Clean Air Act (CAA) Transportation Conformity

Congress passed the first major CAA (42 U.S. Code [USC] 7506(c)) in the 1970s which give EPA primary responsibility to regulate mobile and stationary sources of emissions and direct states to develop SIPs and required conformity determinations for areas designated nonattainment against the NAAQS, which included all six counties in the SCAG region. Conformity analysis and determination can be done at a regional level. SCAG provides a regional transportation conformity analysis in the Plan to address all nonattainment areas within the six county- region. The regional conformity determination is updated every 4 years with the RTP and associated FTIP, and is done as a part of the project-level conformity process for regionally significant projects as they occur. A hot spot analysis is provided to confirm that the project will not cause or worsen a localized violation of the standard for carbon monoxide (CO) or particulate matter (PM10 and/or PM2.5) in the existing nonattainment area. For more information, refer to Section 3.3 Air Quality.

Metropolitan Transportation Planning

The provisions of Title 23 USC Section 134 et seq. provides direct authority for Metropolitan Planning Organizations (MPOs) such as SCAG to act as a regional transportation planning organization with direct responsibility for carrying out the Regional Transportation Plan (RTP). SCAG is tasked with carrying out the transportation planning process and adopting long-range transportation plans. Collaborating with state and public transportation operators, SCAG undertakes a performance-driven, outcome-based approach to planning for the six county regions. SCAG must prepare a transportation plan to be

updated every four years, including identification of transportation facilities and factors for each mode of non-motorized transport to major roadways, transit, multimodal and intermodal facilities, and connectors that should function as an integrated system serving regional transportation functions. The scope of transportation planning process is to provide consideration of projects and strategies that will achieve the following objectives:

- Increase the safety of the transportation system for motorized and non-motorized users
- Increase the security of the transportation system for motorized and non-motorized users
- Increase the accessibility and mobility of people and for freight
- Protect and enhance the environment by promoting consistency between transportation improvements and State and local planned growth and economic development patterns
- Enhance the integration and connectivity of the transportation system, across and between modes, for people and freight
- Emphasize the preservation of the existing transportation system

Safe, Accountable, Flexible, Efficient Transportation Equity Act: A Legacy for Users

In 2005, the Safe, Accountable, Flexible, and Efficient Transportation Equity Act: A Legacy for Users (SAFETEA-LU; Public Law 109–59) was signed into law. SAFETEA-LU provides funding for highways, highway safety, and public transportation totaling \$244.1 billion, representing the largest surface transportation investment ever. The Act followed two bills that highlighted surface transportation funding needs—the Intermodal Surface Transportation Efficiency Act of 1991 (ISTEA) and the Transportation Equity Act for the 21st Century (TEA-21), which shaped the highway program to meet changing transportation needs throughout the nation. SAFETEA-LU addresses challenges such as improving safety, reducing traffic congestion, improving efficiency in freight movement, increasing intermodal connectivity, and protecting the environment. SAFETEA-LU also gives state and local transportation agencies more flexibility to solve transportation problems. SAFETEA-LU expired in 2009 but Congress extended the legislation; the most recent extension is known as Moving Ahead for Progress in the 21st Century (MAP-21). MAP-21 reauthorized most SAFETEA-LU highway, transit and Safety programs through September 2014.

Moving Ahead for Progress in the 21st Century (MAP-21)

MAP-21 (Public Law 112–141) replaces SAFETEA-LU as the nation’s surface transportation program and extended the provisions for fiscal year (FY) 12 with new provisions for FY 13. MAP-21 funds surface transportation programs at over \$105 billion for FY 2013 and FY 2014 and provides additional funding by the passage of continuing resolutions. It is intended to create a streamlined, performance-based, and multimodal program to address challenges facing the U.S. transportation system. These challenges include improving safety, maintaining infrastructure condition, reducing traffic congestion, improving efficiency of the system and freight movement, protecting the environment, and reducing delays in project delivery. MAP-21 builds on and refines many of the highway, transit, bike, and pedestrian programs and policies first established under ISTEA in 1991. One of most significant changes from MAP-21 affecting MPOs, states, and transit operators is the new requirement for performance-based planning that involves use of performance measures and target setting. The U.S. Department of Transportation (U.S. DOT) is in the process of the rulemaking effort to implement these MAP-21

requirements.

Section 1305 of MAP-21 discusses a series of programmatic approaches to conduct environmental review. The rule promulgated the Federal Transit Administration (FTA) and Federal Highway Administration (FHWA) to establish formal procedures for handling specific environmental consultation, review, and compliance. The legislation is also intended to set priorities to further define roles and responsibilities on promoting transparency, timeliness, and describe the relationship between programmatic analysis and future tiered analysis.

Intelligent Transportation System (ITS)

ITS are advanced applications aiming to provide innovative services relating to different modes of transport and traffic management and enable various users to be better informed and make safer, more coordinated, and smarter use of transport networks. With the passage of MAP-21, the ITS has fundamentally shifted from a program of research and development to one focused on infrastructure deployment. Traditionally, an ITS project is one that has information and communication technologies applied to the field of road transport, including infrastructure, vehicles, and users, and in traffic management and mobility management, as well as interfaces with other modes of transport. One way to incorporate MAP-21 vision and implement safety and security into transportation planning is through greater collaboration between transportation planning and operations. Collaboration is particularly critical in metropolitan regions and congested corridors where numerous jurisdictions, agencies, and service providers are responsible for the safety, security, and efficient operation of various aspects of the transportation system. Not only are the roadway and transit system operators themselves dependent on the transportation system, but so are police, fire, and medical services, emergency response and domestic security systems, and port authorities. Because the successful operation of ITS projects usually depend on coordination and communication between different agencies and the systems they operate, it is essential that there be a region-wide framework for cooperation to help achieve that coordination and communication in the most cost-effective manner. This framework is referred to as the Southern California Regional ITS Architecture.

ITS Program in MAP-21: Southern California Regional ITS Architecture

MAP-21 authorizes the Federal Highway Administration (FHWA) to encourage ITS deployment through demonstrations and grant program. The purpose is to promote the integrated management and operations of the transportation system, thereby improving multimodal transportation system management and operation. In the planning stage, ITS would be incorporated into existing transportation planning process. This goal of integration has resulted in a creation of a regional ITS architecture called the Southern California Regional ITS Architecture. The Southern California ITS Regional Architecture includes all six counties in the SCAG region. The goal of the project is to document the ITS Architecture, which is a framework for ensuring institutional agreement and technical integration of technologies for the implementation of projects or groups of projects under an ITS strategy. Local components to the ITS Architecture exist for Los Angeles County, Orange County, Inland Empire, Ventura County, and Imperial County.

Critical Needs Assessment under MAP-21: Statewide Transportation System Needs

There have also been several assessments of the critical state transportation infrastructure, which

include identification of the key transportation facilities.

For the SCAG region to be eligible to receive federal aid for transportation projects, it is required by federal law to prepare periodic assessment of its complex freeways, roads, bridges, rail systems, airports, public transit, and other transportation infrastructures. In 2011, the CTC commissioned a study that summarizes the state of transportation systems in the SCAG region and other Regional Transportation Planning areas from 2011 to 2020. This report includes the total cost of system preservation, system management, and system expansion projects during the 10-year study period.³

Aviation and Transportation Security Act (ATSA) by the 107th Congress: The Mission of the Transportation Security Administration (TSA)

Following the September 11, 2001, attacks, the TSA was created by under the 107th Congress as Public Law 107–71. The ATSA created the TSA to oversee the security of the nation’s transportation systems. With state, local, and regional partners, the TSA oversees security for highways, railroads, buses, mass transit systems, and ports. A vast majority of its resources are dedicated to aviation security, and it is primarily tasked with screening passengers and baggage.

Maritime Transportation Security Act of 2002

The Maritime Transportation Security Act of 2002 (Public Law 107–295), signed on November 25, 2002, is designed to protect the nation’s ports and waterways from a terrorist attack. This law is the U.S. equivalent of the International Ship and Port Facility Security Code (ISPS), and was fully implemented on July 1, 2004. It requires vessels and port facilities to conduct vulnerability assessments and develop security plans that may include passenger, vehicle, and baggage screening procedures; security patrols; establishing restricted areas; personnel identification procedures; access control measures; and/or installation of surveillance equipment.

The Disaster Mitigation Act of 2000 (DMA 2000)

The DMA 2000 (Public Law 106–390) provides an opportunity for states, tribes, and local governments to take a new and revitalized approach to mitigation planning. DMA 2000 amended the Robert T. Stafford Disaster Relief and Emergency Assistance Act of 1988 by adding Section 322 – Mitigation Planning. Section 322 placed new emphasis on mitigation planning requiring governments to develop and submit mitigation plans as a condition of receiving any funding from the Hazard Mitigation Grant Program (HMGP) project grants. This Act reinforces the importance of pre-disaster infrastructure mitigation planning to reduce disaster losses nationwide, and is aimed primarily at the control and streamlining of the administration of federal disaster relief and programs to promote mitigation activities.

³ California Transportation Commission. Accessed 11 September 2015. *2011 Statewide Transportation System Needs Assessment*. Available at: http://www.catc.ca.gov/reports/2011Reports/2011_Needs_Assessment_updated.pdf

State

Sustainable Communities and Climate Protection Act of 2008

The Sustainable Communities and Climate Protection Act of 2008 (Senate Bill [SB] 375, Chapter 728, Statutes of 2008) requires MPOs to prepare a Sustainable Communities Strategy (SCS) that demonstrates how the region will meet its GHG reduction targets through integrated land use, housing, and transportation planning. Specifically, the SCS must identify a transportation network that is integrated with the forecasted development pattern for the plan area and will reduce GHG emissions from automobiles and light duty trucks in accordance with targets set by the California Air Resources Board (California Govt. Code Section 65080(b)(2)(B)). Based on EO G-12-039, the targets accepted by CARB for GHG quantification for SCAG are an 8 percent reduction in per capita GHG emissions by 2020, and a 13 percent per capita reduction by 2035, in both cases with 2005 as a base year.

Changes to CEQA for Transit-Oriented Development

SB 743 codified the addition of Chapter 2.7, Section 21099 to the Public Resources Code (PRC) to provide for changes to CEQA for Transit-Oriented Development and establishes alternative metrics used for traffic levels of service (LOS) for transportation impacts inside transit priority areas. Key SB 743 language includes the following:

(1) The Office of Planning and Research shall prepare, develop, and transmit to the Secretary of the Natural Resources Agency for certification and adoption proposed revisions to the guidelines adopted pursuant to Section 21083 establishing criteria for determining the significance of transportation impacts of projects within transit priority areas. Those criteria shall promote the reduction of greenhouse gas emissions, the development of multimodal transportation networks, and a diversity of land uses. In developing the criteria, the office shall recommend potential metrics to measure transportation impacts that may include, but are not limited to, vehicle miles traveled, vehicle miles traveled per capita, automobile trip generation rates, or automobile trips generated. The office may also establish criteria for models used to analyze transportation impacts to ensure the models are accurate, reliable, and consistent with the intent of this section. (2) Upon certification of the guidelines by the Secretary of the Natural Resources Agency pursuant to this section, automobile delay, as described solely by level of service or similar measures of vehicular capacity or traffic congestion shall not be considered a significant impact on the environment pursuant to this division, except in locations specifically identified in the guidelines, if any.

Pursuant to Public Resources Code (PRC) § 21099(b)(1), the Office of Planning and Research (OPR) is required to prepare a draft revision to the CEQA Guidelines establishing new significance criteria within transit priority areas by July 1, 2014.

Also, upon certification of those guidelines, LOS may no longer be used except if specifically identified in the guidelines (PRC § 21099(b)(2) and (c)(1)). OPR has indicated that maintaining LOS would not “promote the reduction of greenhouse gas emissions, the development of multimodal transportation

networks, and a diversity of land uses” as required by the statute.⁴ Furthermore, in August 2014, OPR published preliminary discussion draft of updates to the CEQA Guidelines implementing SB 743 with a detailed metric setting out an alternative transportation impacts approach in compliance with SB 743 mandate.⁵ Currently, both VMT and LOS analyses are used in assessing transportation impacts, although the more recent GHG emissions analysis is steering away from measurement based on an intersection by intersection approach to assessing a project based on its total vehicle miles traveled for the land use type that it supports. The intent for using VMT as a criterion for measurement is to encourage good incremental, walkable, transit-accessible projects. Thus, it seems possible that LOS (as the sole basis for an impact finding) could be eliminated from CEQA analysis of projects although the technical thresholds of significance for projects’ VMT levels has yet to be determined.

Furthermore, for many active transportation projects that meet the guidelines establishing performance standards for expedited review, such as urban infill projects that promotes increasing efficiencies in transportation, reducing greenhouse gas emissions, supporting transit, and improving public health, SB 743 sets provisions on expediting the project analysis to limit scope of subsequent project EIR review. The bill provide that aesthetic and parking impacts of a residential, mixed-use residential, or employment center project on an infill site, or within a transit priority area, to be exempted from considered as significant impacts for a project.

California Transportation Plan (CTP)

The CTP (SB 64; Chapter 711 Section 14536 amended 65073.1) is prepared by the California Department of Transportation every 5 years to provide a long-range policy framework to meet our future mobility needs and reduce greenhouse gas emissions. The CTP defines goals, performance-based policies, and strategies to achieve our collective vision for California’s future statewide, integrated, multimodal transportation system by envisioning a sustainable system that improves mobility and enhances our quality of life. The CTP is developed in collaboration with transportation stakeholders such as SCAG. Through ongoing engagement, the CTP is intended to provide goals and visions to support a fully integrated, multimodal, sustainable transportation system that supports the quality of life: prosperous economy, human and environmental health, and social equity. The CTP fulfills the state’s goal to meet the Federal Transportation Improvement Program.

Congestion Management Programs (CMPs) Established in Accordance with Proposition 111

Proposition 111 (1990), or “The Traffic Congestion Relief and Spending Limitation Act” (Government Code 65088) enacted a statewide CMP program and provides revenues to reduce traffic congestion by building state highways, local streets, and public mass transit facilities. The CMP was established to link land use, transportation, and air quality and to prompt reasonable growth management programs that

⁴ Governor’s Office of Research and Planning. 6 August 2014. *Updating Transportation Impacts Analysis in the CEQA Guidelines: Preliminary Discussion Draft of Updates to the CEQA Guidelines Implementing Senate Bill 743* (Steinberg, 2013). Available at: http://opr.ca.gov/docs/Final_Preliminary_Discussion_Draft_of_Updates_Implementing_SB_743_080614.pdf

⁵ Governor’s Office of Research and Planning. 6 August 2014. *Updating Transportation Impacts Analysis in the CEQA Guidelines: Preliminary Discussion Draft of Updates to the CEQA Guidelines Implementing Senate Bill 743* (Steinberg, 2013). Available at: http://opr.ca.gov/docs/Final_Preliminary_Discussion_Draft_of_Updates_Implementing_SB_743_080614.pdf

would effectively utilize existing transportation funds to alleviate traffic congestion and related impacts and improve air quality.

Under California law, CMPs are prepared and maintained by the Congestion Management Agencies (CMAs). The Los Angeles County Metropolitan Transportation Authority (Metro), Orange County Transportation Authority (OCTA), Riverside County Transportation Commission (RCTC), San Bernardino Associated Governments (SANBAG), and Ventura County Transportation Commission (VCTC) are the designated CMAs of each county and are subject to State requirements. While Imperial County is not subject to state CMP requirements, CMP-related activities there are accomplished through the development of the RTP/SCS and the Federal Transportation Improvement Program (FTIP) by the Imperial County Transportation Commission (ICTC).

Because the magnitude of congestion and degree of urbanization differ among the counties, each CMP differs in form and local procedure. Under state law, all CMPs are responsible for performing the monitoring and management functions shown below.

- **Highway Performance.** Each CMA monitors the performance of an identified highway system. This monitoring allows each county to track how their system, and its individual components, is performing against established standards, and how performance changes over time.
- **Multi-Modal Performance.** In addition to highway performance, each CMP contains an element to evaluate the performance of other transportation modes including transit.
- **Transportation Demand Management (TDM).** Each CMP contains a TDM component geared at reducing travel demand and promoting alternative transportation methods.
- **Land Use Programs and Analysis.** Each CMP incorporates a program for analyzing the effects of local land use decisions on the regional transportation system.
- **Capital Improvement Program (CIP).** Using data and performance measures developed through the activities identified above, each CMP develops a CIP. This becomes the first step in developing the County Transportation Improvement Program (TIP). Under State law, projects funded through the RTIP must first be contained in the county CIP.
- **Deficiency Planning.** The CMP contains provisions for “deficiency plans” to address unacceptable levels of congestion. Deficiency plans can be developed for specific problem areas or on a system-wide basis. Projects implemented through the deficiency plans must, by statute, have both mobility and air quality benefits. In many cases, the deficiency plans capture the benefits of transportation improvements that occur outside the county TIPs and RTIP such as non-traditional strategies and/or non-regionally significant projects.

The county CMPs together with SCAG’s RTP/SCS and FTIP fulfill the federal requirements for a “congestion management” process in transportation management areas to provide for integrated management and operation of the multimodal transportation system through the use of travel demand reduction and operational management strategies. Elements of a congestion management process include the use of congestion management objectives and performance measures, performance monitoring, identification of congestion problems and needs, and development and assessment of multimodal, demand management, and operational strategies. Federal funds may not be programmed for projects that significantly increase single-occupancy vehicle (SOV) capacity unless they are addressed through a congestion management process.

The regional transportation planning process and the county CMPs should be compatible with one another. To ensure consistency, SCAG and the CMAs have developed the Regional Consistency and Compatibility Criteria for CMPs. Information on the CMP activities and resulting data is updated on a biennial basis by each CMA and supplied to SCAG and air quality management districts.

Executive Order (EO) B-16-2012 on Zero Emission Vehicles

EO B-16-2-12 was signed by Governor Brown on March 23, 2012, to encourage development of the zero emission vehicles (ZEVs) to protect the environment, stimulate the economy, and improve the quality of life in the region. The goals that are promulgated include setting aggressive targets to meet goals in 2015, 2020, and 2025, supporting the rapid commercialization of clean vehicles, and pursuing policies to promote private sector investment and made-in California technologies. Executive Order B-16-2012 also sets a target for 2050 of a reduction of greenhouse gas emissions from the transportation sector equaling 80 percent less than 1990 levels.

In February 2013, an interagency working group developed the ZEV Action Plan which identifies specific strategies and actions that state agencies will take to meet the milestones of the Executive Order. The ZEV Action Plan states:

ZEVs are crucial to achieving the state's 2050 greenhouse gas goal of 80 percent emission reductions below 1990 levels, as well as meeting federal air quality standards. Achieving 1.5 million ZEVs by 2025 is essential to advance the market and put the state on a path to meet these requirements.

Also relevant to the ZEV Action Plan are a set of strategies and actions to complete infrastructure and planning, expand customer awareness and demand, transform fleets, and grow jobs and investments in the sector. One of the goals is to transform fleets by requiring more freight and public carriers to be ZEVs, along with development of electric vehicle infrastructure planning and investment to support access near highway corridors. A subset of this requirement would mandate 25 percent of light-duty vehicle purchases to use ZEVs by 2020.

EO B-32-15 Integrated Action Plan to Improve California's Freight System

On July 16, 2015, Governor Brown issued EO B-32-15, which orders the Secretary of the California State Transportation Agency, the Secretary of the California Environmental Protection Agency, and the Secretary of the Natural Resources Agency to lead other relevant state departments including the California Air Resources Board, the California Department of Transportation, the California Energy Commission, and the Governor's Office of Business and Economic Development to develop an integrated action plan by July 2016 that establishes clear targets to improve freight efficiency, transition to zero-emission technologies, and increase competitiveness of California's freight system. The action plan shall identify state policies, programs, and investments to achieve these targets, and be informed by existing state agency strategies, including the California Freight Mobility Plan, Sustainable Freight Pathways to Zero and Near-Zero Emissions, Integrated Energy Policy Report, as well as broad stakeholder input.

Regional

SCAG Active Transportation Plan

SCAG's Active Transportation Plan included in the 2012 RTP/SCS incorporates critical components in implementing sustainable community strategies, reducing greenhouse gas emissions, increasing public health, and making the region a more enjoyable place to live, work, and play consistent with the provisions of SB 743. Goals of the Active Transportation Plan are to reduce the number of bicycle and pedestrian facilities to less than 50 percent of current levels by 2035, increase the number of projects/funding in the RTIP that include bicycle and/or pedestrian components, and increase in mode share for bicycling and walking to at least 33 percent above the current estimate. SCAG's Active Transportation Plan builds into the verification process provisions used to measure a reduction of environmental footprint through identification of opportunities to provide accommodations in achieving more bicycle and pedestrian friendly region.

SCAG Active Transportation Strategies

The 2016 Active Transportation Plan included in the 2016 RTP/SCS proposes strategies to continue progress made in developing regional bikeway network, assumes all local active transportation plans will be implemented, and dedicates resources to maintain and repair thousands of miles of dilapidated sidewalks. The 2016 Active Transportation Plan also considers new strategies and approaches beyond those proposed in 2012, focusing on ways to augment the plan and active transportation analysis tools in order to:

- Better align active transportation investments with land-use and transportation strategies to reduce costs and maximize mobility benefits.
- Increase the competitiveness of local agencies for federal and state funding.
- Develop strategies that serve the 8-80 crowd to reflect changing demographics and make active transportation attractive to a wider audience.
- Expand regional understanding of the role short-trips play in achieving RTP/SCS goals and performance objectives, and provide a strategic framework to support local planning and project development geared toward serving these trips.⁶

SCAG Bicycle Route 66 Concept Plan

The Concept Plan for Bike Route 66 is a general guide to improve awareness of the route throughout the region and state. The counties within the SCAG jurisdiction in which the route traverses range from Needles to Santa Monica, including Los Angeles and San Bernardino Counties, and 32 cities within Los Angeles and San Bernardino Counties. Establishing a designated route with signage and dedicated bikeways offers commuting, utilitarian, and recreational cyclists a comfortable facility that enhances commute options. On Route 66, a mix of bikeway types is proposed. Class I bikeways covers off-street paths of trails. This class of bikeway incorporates bike paths created from historic transportation assets to provide less stressful alternatives to higher speed streets along Route 66. Class II bikeways cover on-street bike lanes, including Route 66 areas suitable for bicycles or shared use roadways. Class III

⁶ Southern California Association of Governments. October 2015. Transportation Committee. *Draft 2016-2040 Regional Transportation Plan/Sustainable Communities Strategy- Proposed Active Transportation Plan Investment Framework*.

bikeways is a series of bike-friendly streets or low-speed streets that is optimized by bicycle traffic. Overall, Bike Route 66 is a part of the functional network of regional bicycle routes connecting the region and serving commuter, recreational, and touring cyclists. Local jurisdictions are encouraged to use this Concept Plan to develop, refine, and manage the Bike Route in a manner that best serves their areas.

SCAG Regional Bikeway Plan

The proposed 2016 Active Transportation Plan has developed goals for increasing bikeway miles, increase commute mode share of bicycling and walking, and improve trip connections to transit, and increases the number of sidewalks that are ADA compliant. To achieve implementation of these goals, SCAG will collaborate with other transportation agencies, local and regional government, and the California Active Transportation Program to implement a sustainability program in the six counties region. Currently, the shares of walking and biking in SCAG region combined is approximately 18 percent of the total modes available. SCAG is working with local jurisdictions to increase this percentage. By 2035, at least two-thirds of all trips shorter than three miles or half of all trips that are five miles or less could be converted to active transportation.

California Transportation Commission Regional Transportation Plan Guidelines (Adopted Pursuant to California Government Code 14522)

Under Government Code Section 14522, the CTC is authorized to prepare guidelines to assist in the preparation of RTPs. The CTC's RTP guidelines suggest that projections used in the development of an RTP should be based upon available data (such as from the U.S. Census Bureau), use acceptable forecasting methodologies, and be consistent with the Department of Finance baseline projections for the region. The guidelines further state that the RTP should identify and discuss any differences between the agency projections and those of the Department of Finance. The most recent update to the RTP guidelines was published in 2010, and includes new provisions for complying with Senate Bill 375 (see below), as well as new guidelines for regional travel demand modeling. The regional travel demand model guidelines are "scaled" to different sizes of metropolitan planning organizations (MPOs). SCAG is included in the grouping of the MPOs with population in excess of 18 million. The guidelines for regional travel demand modeling for the group, and include (among many other things) detailed guidelines and standards for validation and sensitivity testing of the model. Validation and sensitivity testing of the SCAG model was completed in August 2013.

California Transportation Commission Active Transportation Program Guidelines

Under Senate Bill (SB) 99 (Chapter 359, Statutes 2013) and AB 101 (Chapter 354, Statutes of 2013), the CTC is authorized to prepare guidelines to assist in the preparation of Active Transportation Plans (ATPs). An ATP includes bicycle, pedestrian, safe-routes to-school, and other comprehensive criteria to be included in the circulation element of its general plan in compliance with Complete Streets Act. The CTC's RTP guidelines suggest that all projects within the SCAG region must be selected through a competitive process that meets the federal aid goals. These goals are included in the environmental, design, right-of-way, and construction phases of the infrastructure and non-infrastructure projects. All projects that are selected in the ATP are required to include a discussion of the estimated bicycle and pedestrian trips, facilities report, proposed land use and bicycle transportation facilities, and policies related to parking and ADA compliance.

Plans and Policies Related to Complete Street Act of 2008 (AB 1358; S. 2686)

The Complete Streets Act of 2008 (AB 1358) required cities and counties to incorporate Complete Streets in their general plan updates to ensure that transportation plans meet the needs of all users, including pedestrians, bicyclists, and transit users as well as children, older individuals, and individuals with disabilities, to travel safely and conveniently on streets and highways. In the SCAG region, all six of the counties have developed their own bicycle and pedestrian plans. Majority of these bicycle pathways are part of existing Class II path which provides on-street bike lanes, although a few are in Class I category, which mean that the path is separate from automobile traffic, and some are categorized as Class III pathways with on-street bike lanes further designated by signs.

Imperial County Bicycle Master Plan

In 2011, Imperial County updated a Bicycle Master Plan,⁷ which was originally created in 2003. The guiding vision of the plan is to “encourage and promote bicycling as a safe and convenient form of transportation and recreation.” The Plan will implement 253.5 miles of bikeways with intent to replace vehicular trips with bicycle trips. Providing transportation options to reduce Vehicle Miles Traveled is an important feature of this plan that is supportive of SCAG’s overall goals and visions for limiting source pollution control such as carbon dioxide, nitrogen oxides, and hydrocarbon releases and an important component of decreasing greenhouse gas emissions and improving air quality.

Los Angeles County Bicycle Master Plan

Metro⁸ developed a Bicycle Transportation Strategic Plan (BTSP) in 2006 to be used by “the cities, the County of Los Angeles and transit agencies in planning bicycle facilities around transit and setting priorities that contribute to regional improvements. The goal is to integrate bicycle use in transportation projects.” In addition, Metro also created a Bicycle Transportation Account Compliance Document (BTA Document) to provide an “inventory and mapping of existing and proposed facilities, and an estimate of past and future expenditures for bicycle facilities.” In 2013, SCAG and Metro developed the Bike County Data Clearinghouse to assist LA County conduct bicycle counts. The Los Angeles County Department of Public Works adopted a Countywide Bicycle Master Plan in 2012, which was developed with the over-arching goal of increasing “bicycling throughout the County of Los Angeles through the development and implementation of bicycle-friendly policies, programs, and infrastructure.” The plan recommends the development of an interconnected network of bicycle corridors, with approximately 695 miles of bikeway facilities. This plan looks at the ridership and air quality benefits from cycling and also includes a list of existing and proposed bikeways in LA County.⁹

Orange County Bicycle Master Plan

The 2011 Orange County Bikeways Strategic Plan was developed “to encourage the enhancement of Orange County’s regional bikeways network, in order to make bicycle commuting a more viable and attractive travel option.” The plan identifies approximately 116 miles of priority bikeway projects. In 2012, the Orange County Transportation Authority provides an addendum to the existing Plan with a Commuter Bikeways Strategic Plan (CBSP) that refines the regional bikeway networks and specified which bikeways are connected to priority locations including major transit investment areas, employment centers, stations, colleges, and universities.¹⁰

Riverside County Non-Motorized Transportation Plans

The Western Riverside Council of Governments (WRCOG) and the Coachella Valley Association of Governments (CVAG) have developed Non-Motorized Transportation Plans in 2010 for their respective jurisdictions covering most of Riverside County.¹¹ WRCOG’s 2010 Non-Motorized Transportation Plan proposes the development of over 440 miles of bikeways in order to provide a “regional backbone network of bicycle and pedestrian facilities to provide enhanced transportation mobility options.” The 2010 CVAG Non-Motorized Transportation plan recognizes the “value of providing opportunities for local residents and visitors to bicycle for work and recreation, as well as to use off-road trails for hiking, equestrians and jogging.”

San Bernardino County Non-Motorized Transportation Plans

The Revised 2015 San Bernardino County Non-Motorized Transportation Plan’s goals include: (1) improving pedestrian access to transit; (2) removing existing barriers to pedestrian travel; (3) developing regional trails and pathways, which provide improved pedestrian access to destinations; and (4) improving the pedestrian environment on major regional arterials and at regional activity centers.¹² Pedestrian access, mobility, and health benefits are captured in the revised plan.

Ventura County Bicycle Master Plan

The 2007 Ventura County Bicycle Master Plan “provides a broad vision, strategies and actions for the improvement of bicycling” by maximizing funding sources for implementation; improving safety and encouraging cycling; expanding the network and support facilities; and enhancing the quality of life in and overall environmental benefits. Within the County of Ventura, many jurisdictions and municipalities also has a bicycle plan to encourage non-motorized commutes.

Active Transportation Plans

In addition to county plans, many local jurisdictions have developed their own active transportation plans or include active transportation components in the Circulation Element of their General Plan. Many street enhancement projects or capital improvement projects include active transportation elements as well. For example, many street improvement projects may include the striping of bikeways or new developments may include sidewalk enhancements.

Transit and Transportation Finance

The 2016 RTP/SCS expenditure plan includes the expansion of transit facilities and service over the next 25 years. There are major transit capital projects under construction in four of the six Counties in the SCAG region: Los Angeles County, Orange County, Riverside County, and San Bernardino County (**Table 3.17.1-1, Major Transit Capital Projects**). Local county sales tax programs are funding much of this expansion.

**TABLE 3.17.1-1
MAJOR TRANSIT CAPITAL PROJECTS**

County	Project	2016 RTP Completion Year	Project ID
Los Angeles	Crenshaw/LAX Transit Corridor	2021	LAOD198

Local

County General Plans Circulation Element

Each of the six counties within the SCAG region has prepared a Transportation or Circulation Element, as a required component of the General Plan. The Transportation or Circulation Element provides a summary of the existing conditions in the planning area, major issues, goals, and policies, as well as pertinent action programs related to traffic and circulation related to a variety of transportation systems (highway and local road networks, bus, rail, high speed rail, aviation network, harbors, bicycles, pedestrians, and rideshare). The Transportation or Circulation Element describes the major locations and corridors for existing and future travel based on land use patterns in order to develop a comprehensive, coordinated, and continuing transportation system for the region. Relevant policies include encouraging provision of transit service at a reasonable cost to the users and the community, encouraging the efficient use and conservation of energy and ease congestion, and, where the land use would support, providing for development of a mass transportation system that will provide a viable alternative to the automobile, and support a balance in transportation modes with public transit system that provides accessible service, particularly to the transit dependent. A transportation system will operate at regional, countywide, community, and neighborhood scales to provide connectivity between communities and mobility between jobs, residences, and recreational opportunities.

County General Plans Safety Element

Each of the six counties in the SCAG region prepared a Safety Element as a required component of the General Plan. The Safety Element generally discusses measures to abate the impacts in case of catastrophe for maintenance of the transportation infrastructure. The Traffic and Transportation Division under each county is responsible for developing plans and guidelines for the maintenance of traffic control devices, emergency travel routes in the event of an emergency, placement of barricades, and control of traffic and coordination with other departments to promote integrated disaster planning, response and mitigation efforts. Included in the Safety Element discussion are strategies for continuation of adequate critical infrastructure systems and services to assure adequate circulation, communications, and transportation services for emergency response in the event of disaster related systems disruptions.

City of Los Angeles 2010 Bicycle Plan

The 2010 Bicycle Plan, proposed by the Los Angeles Department of City Planning, was adopted on March 1, 2011, as a component of the City of Los Angeles Transportation Element. This plan adheres to a complete streets approach that moves Los Angeles towards a more sustainable transportation system including all forms of active transportation, not just automobiles. The three main goals established in the Plan are to increase the number and types of bicyclists who bicycle in the City, make every street a safe place to ride a bicycle, and make the City of Los Angeles a bicycle-friendly community. The 2010 Plan designates an ambitious 1,684-mile bikeway system, built off an existing 334-mile bikeway system, and introduces a comprehensive collection of programs and policies. Among the elements of the 2010 Plan are several innovations in bicycle planning for Los Angeles. Four of them deserve special mention:

a Citywide Bikeway System comprised of three bikeway networks, Bicycle Friendly Streets, the bundling of programs and policies into ten categories, and a multipronged implementation strategy.^{13,14}

Following the passage of the bike plan, the City of Los Angeles includes a five-year implementation plan with a Bike Plan Implementation Team to ensure that the Plan's many projects are being implemented in an efficient and equitable manner to create a more inclusive community.

3.17.2 EXISTING CONDITIONS

The Southern California transportation system is a complex intermodal network designed to carry both people and goods. It consists of roads and highways, transit, passenger and freight rail, airports, seaports, and intermodal terminals. The regional roadway system consists of an interconnected network of interstates, freeways, highway, toll roads, arterial streets, and local streets. This roadway network allows for the operation and movement of private vehicles, commercial vehicles, private and public buses, and heavy-duty trucks. Active transportation modes, such as biking and walking use non-motorized transportation facilities, including bikeways and walkways that often share spaces with roadway facilities. SCAG is currently working on engaging local jurisdictions to expand bicycle and pedestrian network to encourage use of active transportation modes, establish safe routes to school, and educate bicyclists and pedestrians on activities around sensitive communities. The regional public transit system includes local shuttles, municipal and area-wide bus operations, light rail transit operations, regional commuter rail services, and interregional passenger rail service. The freight railroad network includes an extensive system of private railroads and several publicly owned freight rail lines serving industrial cargo and goods. The airport system consists of commercial, general, and military aviation facilities serving passenger, freight, business, recreational, and defense needs. The region's seaports support substantial international and interregional freight movement and tourist travel. Intermodal terminals consisting of freight processing facilities, which transfer, store, and distribute goods. The interconnected and complex transportation system advances the region's mobility and supports the region's economic growth, as well as the demand for safe personal travel.

Circulation System

Commute Patterns and Travel Characteristics

The existing transportation network serving the SCAG region supports the movement of people and goods. On a typical weekday in the six-county region, the transportation network supports a total of nearly 448 million vehicle miles of travel (VMT) and nearly 13 million vehicle hours of travel (VHT). Of this total, over half occur in Los Angeles County and less in Orange, San Bernardino, Riverside, Ventura, and Imperial Counties, respectively (Table 3.17.2-1, *Summary of Existing Daily Vehicle Miles and Percentage Vehicle Hours of Travel*).

Much of the existing travel in the SCAG region takes place during periods of congestion, particularly during the morning (6:00 a.m. to 9:00 a.m.) and evening peak periods (3:00 p.m. to 7:00 p.m.).

¹³ Southern California Association of Governments. Accessed 11 September 2015. *California Bicycle Route 66 Concept Plan*. Available at: <http://www.scag.ca.gov/Documents/Bike%20Route%2066%20concept%20plan.pdf>

¹⁴ Los Angeles Department of City Planning. Accessed 11 September 2015. *2010 Bicycle Plan*. Available at: <http://planning.lacity.org/cwd/gnlpln/transelt/NewBikePlan/Txt/LA%20CITY%20BICYCLE%20PLAN.pdf>

Congestion can be quantified as the amount of travel that takes place in delay (vehicle hours of delay or VHD) and, alternately, as the percentage of all travel time that occurs in delay (defined as the travel time spent on the highway due to congestion, which is the difference between VHT at free-flow speeds and VHT at congested speeds). Existing travel delays and percent of regional VHT in delay ranges from a low of no delay in Imperial County on freeways and arterials to 67 percent in Los Angeles County, with an average of 17 percent in the SCAG region (Table 3.17.2-2, *Summary of Existing Delay and Work Trip Length*; Figure 3.17.2-1, *Base Year 2012 AM Peak Period Congestion Delay on the Regional Freeway System*; Figure 3.17.2-2, *Plan 2040 AM Peak Period Congestion Delay on the Regional Freeway System*; Figure 3.17.2-3, *Base Year 2012 PM Peak Period Congestion Delay on the Regional Freeway System*; Figure 3.17.2-4, *Plan 2040 PM Peak Period Congestion Delay on the Regional Freeway System*). While there is a relatively small variation in average travel distance from home to work, from 10 miles in Imperial County, to 18 miles in Riverside and San Bernardino Counties, the average travel time during the peak hours ranges from a low of 13 minutes in the a.m. peak hour in Imperial County to a high of 116 minutes in San Bernardino County (Table 3.17.2-2). Home-to-work trip duration and distance are both greater for the inland counties of Riverside and San Bernardino, reflecting regional housing and employment distribution patterns.

The characteristics of home-to-work trip and all daily trips vary widely among counties (Table 3.17.2-3, *Existing Travel Mode Split [Percentage of County Total]*). On average, vehicular trips account for nearly 90 percent of home to work trips, including 75.8 percent in single occupancy trips, 3.6 percent in two-person carpools, 1.8 percent in three-person carpools, and 8.2 percent in auto passenger trips. When accounting for all daily trips, on average vehicular trips account for approximately 86 percent of all daily trips, including 43.3 percent in single occupancy trips, 8.0 percent in two-person carpools, 7.7 percent in three-person carpools, and 27.6 percent in auto passenger trips. Public transit in all forms (including school buses) carries approximately 2.4 percent of all trips in the SCAG region. Of these, the greatest number of travelers is carried by buses, with lesser patronage on Metro Rail, paratransit, commuter rail, and other forms of public transit services. Trips made via public transit account for 6.1 percent of all home-to-work trips in the region and 2.4 percent of all daily trips (Table 3.17.2-3). Non-motorized trips account for 4.0 percent of all home-to-work trips in the region and 11 percent of all daily trips (Table 3.17.2-3).

Regional Freeway, Highway, and Arterial System

The regional freeway, highway, and arterial system is the primary means of person and freight movement for the region (Table 3.17.2-4, *Existing Regional Freeway Route Miles and Lane Miles by County*). This system provides for direct auto, bus and truck access to employment, services and goods. The network of freeways, interstates, and highways serves as the backbone of the system offering very high capacity limited-access travel and serving as the primary heavy-duty truck route system. As discussed in Chapter 3 of the 2016 RTP/SCS, the rate of deterioration is expected to accelerate significantly as maintenance cost continues to be deferred on our roadway systems such that to bring back these assets to a state of good repair would improve security and lead to efficiency although costly. The SCAG region will focus on preserving the existing transportation network, including preservation of roads, highways, bridges, railways, bicycle and pedestrian facilities, and transit infrastructures that lead to maintain mobility and provide cost-efficiency without increasing capacity.

**TABLE 3.17.2-4
EXISTING REGIONAL FREEWAY ROUTE MILES AND LANE MILES BY COUNTY**

County	Freeway Route Miles	Freeway Lane Miles
Imperial	95	379
Los Angeles	538	4,231
Orange	201	1,525
Riverside	298	1,697
San Bernardino	453	2,471
Ventura	91	516
Total	1,676	10,820

SOURCE: SCAG modeling, 2015.

Regional High-Occupancy Vehicle (HOV) System and Park and Ride System

The regional HOV system consists of exclusive lanes on freeways and arterials, as well as busways and exclusive rights-of-way dedicated to the use of high-occupancy vehicles (HOVs). It includes lanes on freeways, ramps and freeway-to-freeway connectors (Table 3.17.2-5, *Existing Regional High-Occupancy Vehicle Lane Miles by County*). The regional HOV system is designed to maximize the person-carrying capacity of the freeway system through the encouragement of shared-ride travel modes. HOV lanes operate at a minimum occupancy threshold of either two or three persons. Many include on-line and off-line park and ride facilities, and several HOV lanes are full “transitways” including on-line and off-line stations for buses to board passengers.

**TABLE 3.17.2-5
EXISTING REGIONAL HIGH-OCCUPANCY VEHICLE LANE MILES BY COUNTY**

County	HOV Total Lane Miles
Imperial	0
Los Angeles	507
Orange	244
Riverside	82
San Bernardino	105
Ventura	0
Total	938

SOURCE:
SCAG modeling, 2015.

Park and ride facilities are generally located at the urban fringe along heavily traveled freeway and transit corridors and support shared-ride trips, either by transit or by carpool or vanpool. Most rail transit stations have park and ride lots nearby. Park and ride lots in the SCAG region include: 106 in Los Angeles County, 25 in Orange County, 26 in Riverside County, 18 in San Bernardino County, and 20 in Ventura County.¹⁵

¹⁵ IE511.org. Accessed 11 September 2015. *Find a Park & Ride Lot*. Available at: <http://www.ie511.org/rideshare/park-and-ride>

Arterial Street System

The local street system provides access for local businesses and residents. Arterials account for over 80 percent of the total road network and carry a high percentage of total traffic (Table 3.17.2-6, *Existing Regional Arterial Route Miles and Lane Miles by County*). In many cases arterials serve as alternate parallel routes to congested freeway corridors. Peak period congestion on the arterial street system occurs generally in the vicinity of activity centers, at bottleneck intersections and near many freeway interchanges.

Goods Movement

Wholesale and retail trade, transportation, and manufacturing support over approximately 3.3 million jobs in the SCAG region according to statistics provided by the State's Employment Development Department.¹⁶ Goods movement includes trucking, rail freight, air cargo, marine cargo, and both domestic and international freight, the latter entering the country via the seaports, airports, and the international border with Mexico. Additionally, many cargo movements are intermodal, for example, sea to truck, sea to rail, air to truck, or truck to rail. The goods movement system includes not only highways, railroads, sea lanes, and airways, but also intermodal terminals, truck terminals, railyards, warehousing, freight consolidation/de-consolidation terminals, freight forwarding, package express, customs inspection stations, truck stops, and truck queuing areas.

¹⁶ State of California Employment Development Department. 21 August 2015. News Release No. 15-32. Available at: http://www.edd.ca.gov/About_EDD/pdf/urate201508.pdf

Heavy-Duty Trucks

One of the key components of the region's goods movement system is the fleet of heavy-duty trucks, defined as cargo-carrying vehicles with a gross weight rating in excess of 8,500 pounds. Trucks provide a vital link in the distribution of all types of goods between the region's ports (sea and air), railroads, warehouses, factories, farms, construction sites and stores. The size and weight of heavy-duty trucks gives them unique operating characteristics; that is, they accelerate and decelerate more slowly than lighter vehicles and require more road space to maneuver. Dedicated truck lanes currently exist at two major freeway interchanges: the junction of Interstate 5 (I-5) with the I-210 and State Route 14 (SR-14) and at the junction of the I-405 with the I-110. In addition, truck climbing lanes are located on northbound I-5 in northern Los Angeles County.

The trucking industry, including common carrier, private carrier, contract carrier, drayage and owner-operator services, handles both line-haul and pick-up and delivery. The industry uses the public highway system for over-the-road and local service. However, it is also served by a considerable infrastructure of its own. This infrastructure includes truck terminals, warehousing, consolidation and trans-loading facilities, freight forwarders, truck stops and maintenance facilities. These various facilities are especially prevalent in the case in the South Bay and Gateway Cities areas, including Wilmington and Carson and extending generally between Los Angeles International Airport (LAX) and the San Pedro Bay Ports, along the I-710 Corridor north to Vernon, Commerce, and Downtown Los Angeles, east through the San Gabriel Valley to Industry, Pomona, and Ontario and then to the Inland Empire in Fontana and Rialto as well as in Glendale, Burbank and Bakersfield. Specialized facilities for trucking that provide air cargo ground transport are located around regional airport facilities, notably LAX and LA/Ontario International Airport.

Railroads

The SCAG region is served by two main line commercial freight railroads—the Burlington Northern/Santa Fe Railway Co. (BNSF) and the Union Pacific Railroad (UP). These railroads link Southern California with other United States regions, Mexico, and Canada either directly or via their connections with other railroads. They also provide freight rail service within California. In 2012, railroads moved approximately 154.8 million tons of cargo throughout California.¹⁷

The SCAG region is also served by three short line or switching railroads:

- The Pacific Harbor Line (formerly the Harbor Belt Railroad), which handles all rail coordination involving the Ports of Los Angeles and Long Beach, including dispatching and local switching in the harbor area
- Los Angeles Junction Railway Company, owned by BNSF, which provides switching service in the Vernon area for both the BNSF and UP
- The Ventura County Railroad, owned by Rail America, Inc., which serves the Port of Hueneme and connects with the UP in Oxnard

¹⁷ Association of American Railroads. 2012. U.S. Freight Railroad Industry Snapshot: California. Available at: <https://www.aar.org/data-center/railroads-states#state/CA>

These railroads perform specific local functions and serve as feeder lines to the trunk line railroads for moving goods to and from Southern California.

The two main line railroads also maintain and serve major facilities in the SCAG region. Intermodal facilities in Commerce (BNSF-Hobart), East Los Angeles (UP), San Bernardino (BNSF), and Carson near the San Pedro Bay Ports (UP-ICTF), the Los Angeles Transportation Center (UP-LATC), and the UP-City of Industry yards serve on-dock rail capacity at the Ports of Los Angeles (UP/BNSF) and Long Beach (UP/BNSF).

All of the major rail freight corridors in the region have some degree of grade separation, but most still have a substantial number of at-grade crossings on major streets with high volumes of vehicular traffic. These crossings cause both safety and reliability problems for the railroads and for those in motor vehicles at the affected crossings. Trespassing on railroad rights of way by pedestrians is another safety issue affecting both freight and commuter railroads.

As an example, the Alameda Corridor, a 20-mile, four-lane freight rail expressway, began operations in April 2002. In 2014, approximately 17,061 intermodal trains transited the Alameda Corridor, an approximate increase of 2.9 percent since 2013.¹⁸

Public Transit

In Southern California public transit service is comprised of local and express buses, transitways, Rapid Bus, bus rapid transit (BRT), urban rail, including subway and light rail principally centered in the core of Los Angeles County, commuter rail that spans five counties and shuttles/circulators that feed all transportation modes and activity centers (Table 3.17.2-7, *SCAG Region Annual Fixed Route Transit Ridership*). Transit service is provided by approximately 67 separate public agencies. Twelve of these agencies provide 91 percent of the existing public bus transit service. Local service is supplemented by municipal lines and shuttle services. Private bus companies provide additional regional service.

**TABLE 3.17.2-7
SCAG REGION ANNUAL FIXED ROUTE TRANSIT RIDERSHIP**

Many people depend on reliable transit service to participate in the economic, cultural, and social benefits of Southern California, and transit use is growing in the SCAG region (Table 3.17.2-8, *Statistics for Major Transit Operators for 2010*). As of 2012, transit agencies in the SCAG region reported over 716 million annual boarding. This represents growth of 14 percent between 2001 and 2012, but only 3 percent growth in per capita trips due to population growth. In the same period, Metrolink saw annual ridership grow by 78 percent, and Metro Rail (Los Angeles County) by 64 percent.

**TABLE 3.17.2-8
STATISTICS FOR MAJOR TRANSIT OPERATORS FOR 2010**

County	Largest Transit Operator	Average Weekday Boardings	Annual Boardings	Annual Vehicle Revenue Miles (VRM)	Passenger Fares as a % of Operation Expenses*
FIXED ROUTE BUS SERVICE					
Imperial	IVT	2,000	593,000	666,000	15.2%
Los Angeles	Metro	1,579,000	503,071,000	139,274,000	24.4%
Orange	OCTA	182,000	58,104,000	21,666,000	25.1%

Metro Rail System

Existing urban rail lines (Metro Rail) are located in Los Angeles County and are operated by Metro. They include the Metro Blue Line from Long Beach to Downtown Los Angeles, the Metro Green Line from Redondo Beach to Norwalk, the Metro Expo Line from Downtown Los Angeles to Culver City, and the Metro Red Line subway from Union Station to North Hollywood. The Metro Purple Line subway follows the Red Line from Union Station to Wilshire and Vermont but branches off to Western Avenue, and the Metro Gold Line that runs from East Los Angeles (Atlantic station) to Pasadena via Union Station (shown in Figure 3.17.2-5, *Future Rail Line Projects*). The Metro Rail system is operated seven days a week. A system total of 87.7 route miles serves a total of 80 stations. Ridership on the Metro Rail system is approximately 323,870 boardings every day.¹⁹

Commuter Rail and Intercity Passenger Rail

Commuter rail service is operated by the Southern California Regional Rail Authority (SCRRA). In October of 1992, the SCRRA began initial operation of the Metrolink commuter rail system on three lines. Service on the initial system was greatly expanded after the 1994 Northridge earthquake.

Sources: SCAG, ESRI Shaded Relief, Tele Atlas

Currently SCRRRA operates seven routes including five from Downtown Los Angeles to Ventura, Lancaster, San Bernardino, Riverside, and Oceanside, from San Bernardino to Oceanside, and from Riverside via Fullerton or City of Industry to Downtown Los Angeles. As of September 2014, the system operated 169 trains on weekdays, 44 on Saturdays, and 38 on Sundays to 55 stations on 512 route miles. Average weekday ridership is approximately 43,667 passengers.²⁰

Amtrak provides significant regional and interregional service on the Los Angeles–San Diego–San Luis Obispo (LOSSAN) Corridor (also known as Amtrak’s Pacific Surfliner corridor) operating 12 daily round-trip services, with service to Los Angeles Union Station (Figure 3.17.2-6, *Amtrak Railways*). Additionally, Amtrak operates four interstate routes within the region (Coast Starlight, Sunset Limited, Southwest Chief and Texas Eagle) that on average have one daily trip.²¹

Shuttles and Demand-Responsive Services

One component of the region’s public transit system consists of publicly operated or funded demand-response taxis and dial-a-ride services; some open to the general public, others limited to elderly and disabled use. It also includes locally operated or funded shuttle buses (e.g., Los Angeles DASH, Pasadena ARTS, Glendale Beeline, Cerritos on Wheels, El Monte Transit, Riverside Orange Blossom, etc.). Access Paratransit, the largest provider of transportation services for the disabled in the region, operates in the vicinity of fixed-route bus and rail lines in Los Angeles County and extends into portions of the surrounding counties of San Bernardino, Orange and Ventura. These systems serve as local shuttles, internal circulators, connectors to other public transit, or as shoppers’ shuttles. Service on these systems is usually limited to a prescribed geographic area.²²

Active Transportation and Non-Motorized Transport

The California Active Transportation Program (ATP) was created to ensure all active modes of transportation, such as biking and walking, was accounted to meet the development of active transportation plans in disadvantaged communities as well as the implementation of non-infrastructure projects (i.e. education, enforcement activities). The use of bicycle as a means of transportation has several appealing aspects for an increasing share of travelers.

Bicycle and Pedestrian Facilities

Biking and walking primarily constitutes non-motorized transportation. Non-motorized transportation plays a bigger role in the densely-populated, mixed-land-use areas of the region. Bicycling has positive air quality, economic, and health impacts, and can reduce automobile-related congestion and energy use. Similar to bicycle use, walking can also reduce auto emissions of both criteria pollutants and greenhouse gases from auto trips. Health in communities improve when there are options to increase physical outcome of activities, lower body weight, lower rates of traffic injuries, lower air pollution, and

— Amtrak Railway

improve mobility for nondrivers. Currently, the average walking and bicycling distances in commutes from the SCAG region is between zero to three miles, although approximately 34 percent of the population walks or bicycles one-quarter to one-half mile, and more than 15 percent walk between one-half and one mile per day. Both modes of non-motorized transport would not require consumption of scarce fuel, and can be used for work and nonwork purposes. In 2012, biking and walking accounted for approximately 13.4 percent of total trips in SCAG region; 18.7 percent of these trips are originated from school, and 10.4 percent are shopping trips.²³

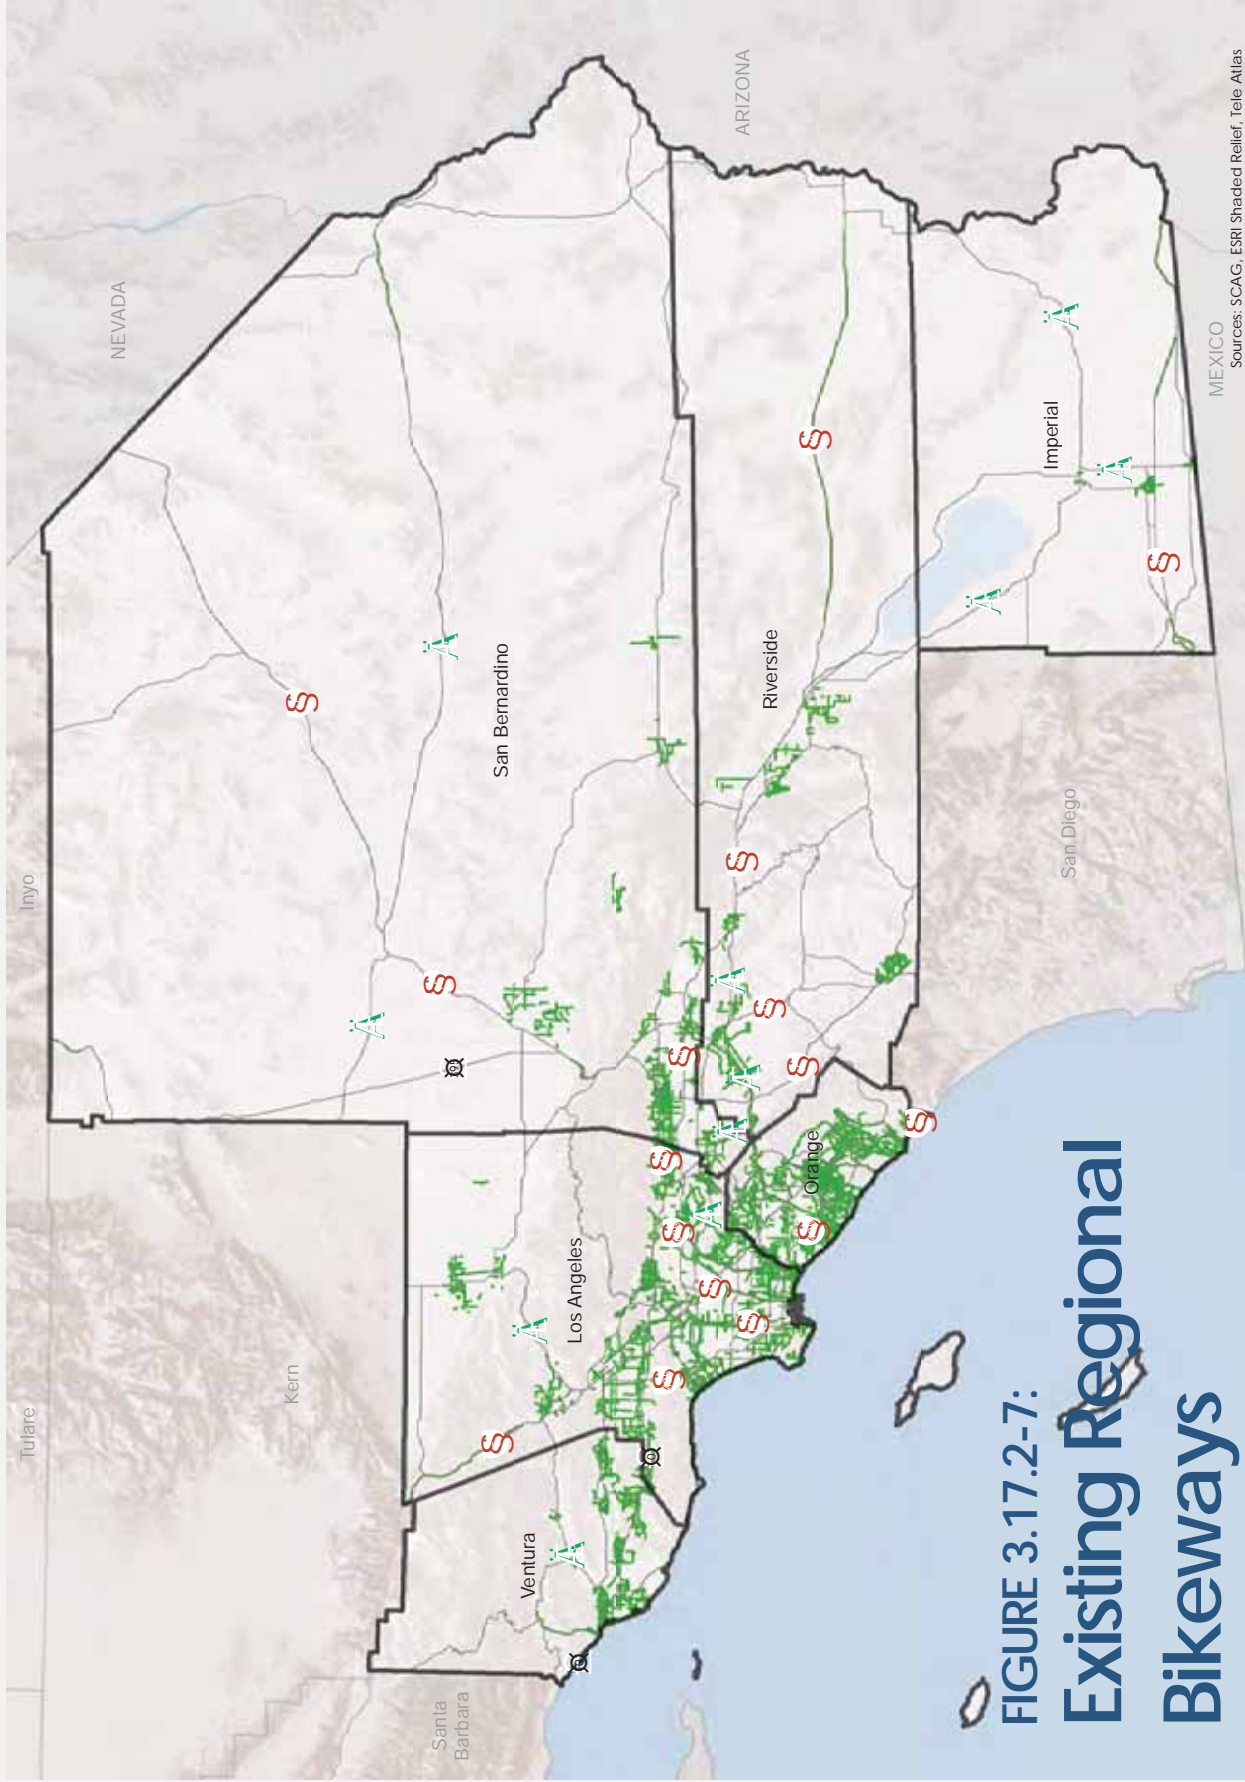

The region's bikeways encourage non-motorized travel, serve as recreational facility, and provide inexpensive, environmentally friendly transportation opportunities. Some of the strategies to encourage active transportation currently being considered are focused on improving local mobility for those who walk less than three miles a day, improving multimodal strategies for shared mobility, and improving compact community development through targeted High Quality Transit Areas (HQTAs). The bikeways are also designated to provision for allowable use and to encourage active use. Class I bikeways are separate shared-use paths also used by pedestrians, Class II bikeways are striped lanes in streets, and Class III bikeways are signed routes. There are approximately 3,919 bikeway miles in the region, with the majority in Los Angeles County, followed by Riverside and Orange County. Approximately 746 miles are Class I bikeways, 2,150 Class II Bikeways, and 1,021 Class III Bikeways. Bike rack, locker, and station programs are ongoing in a number of cities and transit operators. In addition, transit operators are integrating bicycle transportation with transit via bus bike racks, bike-on-train programs and bicycle lockers at transit centers. **Figure 3.17.2-7, Existing Regional Bikeways, and 3.17.2-8, Existing and Proposed Regional Bikeways (2040)**, show the existing and proposed bikeways in the SCAG region.

Pedestrian access at and near public transit, in most major commercial areas, and many residential areas is facilitated by sidewalks, a number of pedestrian malls, and in some cases local jogging and pedestrian trails or paths.

Regional Aviation System

The SCAG region supports the nation's largest regional airport system in terms of number of airports and aircraft operations, operating in a very complex airspace environment. The SCAG region contains 56 public use airports, including six active commercial service airports, 44 general aviation, two active limited-commercial service (commuter) airports, two former military airfields (now public use airports) and two joint-use facilities. The existing active commercial service airports handle the majority of passenger air traffic (see **Figure 3.9.2-1, Airports in the SCAG Region**, in Section 3.9, *Hazards and Hazardous Materials*).

In all, approximately 86.4 million annual passengers (MAP) were served in the region in 2012, more than double the number served in 1980. The level of regional aviation demand forecasts related to MAP has been decreasing, with approximately 170 MAP by 2030 in the 2004 RTP, 165.3 MAP by 2035 in the 2008 RTP, and 145.9 MAP by 2035 in the 2012 RTP/SCS.²⁴ In 2013, the regional total aviation demand was 88 MAP.²⁵ In 2014, Los Angeles International Airport led the largest share of air passengers with approximately 76.1%, following by John Wayne Airport at 10.1%, Ontario International Airport at 4.5% and Burbank/Bob Hope Airport at 4.3%.²⁶ While none of the individual airports is the largest in the U.S., the region's airports collectively are the busiest of any region in the country. LAX accounts for the largest proportion of passenger volume, cargo, and annual operations (**Table 3.17.2-9, Existing [2014] Activity at Major Commercial Airports in the SCAG Region**). A brief discussion of the location, major access routes, and facilities at each of these airports follows. In addition, the six other regional airports at which major improvements and/or conversion to civilian uses are contemplated are described below.

Passenger and cargo data from U.S. DOT T-100 database, operations from Federal Aviation Administration Operations Network (OPSNET), 2015, except for IPL. IPL operations from FAA Terminal Area Forecast for fiscal year 2013. Operations include commercial and general aviation flights, including touch-and-go, but exclude military flights.

Los Angeles International Airport

LAX is located in the southwestern portion of the City of Los Angeles, bordered by Arbor Vitae / Westchester Parkway to the north, I-405 to the east, I-105 / Imperial Highway to the south, and the Pacific Ocean to the west (Figure 3.9.2-1). It is surrounded by the communities of Westchester and Playa del Rey to the north; the City of El Segundo to the south; and the City of Inglewood and unincorporated areas of Los Angeles County (Lennox and Del Aire) to the east. Major access routes include I-405 and I-105 and a complex network of surface streets extending throughout the surrounding area, including Sepulveda Boulevard, Lincoln Boulevard, La Cienega Boulevard, Aviation Boulevard, Century Boulevard, Arbor Vitae / Westchester Parkway, and Imperial Highway.

Ontario International Airport

LA/Ontario International Airport (ONT) is located in the southwest section of San Bernardino County within the city of Ontario, approximately two miles east of Ontario's Central Business District between Holt and Mission Boulevards, and between Haven and Grove Avenues (Figure 3.9.2-1). Major access routes include I-10 and SR-60 and the major surface streets in the surrounding area, including Holt Boulevard, Archibald, and Vineyard Avenues.

John Wayne Airport

John Wayne Airport (SNA) is located in the western portion of Orange County, directly south of I-405, one mile east of SR-55, and one mile north of SR-73 (Figure 3.9.2-1). Major access routes include these freeways and the major surface streets in the surrounding area, including MacArthur Boulevard and Michelson Drive. The majority of the land surrounding is within the cities of Newport Beach, Costa Mesa, and Irvine. In addition, the unincorporated community of Santa Ana Heights is located southeast of the airport.

Burbank/Bob Hope Airport

Bob Hope Airport (BUR) is located in the western portion of Los Angeles County, on the west side of the City of Burbank, one mile south of I-5, three miles east of SR-170, and three miles north of SR-134 (Figure 3.9.2-1). Major access routes include these freeways and the major surface streets in the surrounding area, including Hollywood Way and San Fernando Road.

Imperial County Airport

Imperial County Airport (IPA), also known as Boley Field Airport, is located just west of SR-86 and north of I-8, in the City of Imperial (Figure 3.9.2-1). It is a small airport serving mostly general aviation and commuter flights, and meets all general aviation, air transportation, and air cargo needs for Imperial County.

Long Beach Airport

Long Beach Airport (LGB) is located in the southern portion of Los Angeles County, in the center of the City of Long Beach, directly north of I-405, and three miles west of I-605, and three miles east of I-710

(Figure 3.9.2-1). Major access routes include these freeways and the major surface streets in the surrounding area, including Lakewood Boulevard (SR-19).

Palm Springs International Airport

Palm Springs International Airport (PSP) is located in the central portion of Riverside County, in the City of Palm Springs, two miles southwest of I-10 and one mile northeast of Gene Autry Trail (SR-111) (Figure 3.9.2-1). Major access routes include these highways and the major surface streets in the surrounding area, including Ramon Road.

Palmdale Regional Airport

Palmdale Regional Airport (PMD) is located in northern Los Angeles County, within the north central portion of the City of Palmdale in United States Air Force Plant 42 (AFP 42), one mile north of SR-138, and three miles east of SR-14 (Figure 3.9.2-1). Major access routes include these highways and the major surface streets in the surrounding area, including 20th Street and Avenue P.

San Bernardino International Airport

San Bernardino Airport (SBD), formerly Norton Air Force Base, is within the City of San Bernardino and is surrounded by unincorporated areas of San Bernardino County and the cities of Redlands, Loma Linda, Highland, and Colton (Figure 3.9.2-1). The airport is approximately three miles east of I-215, two miles north of I-10, and one mile west and two miles south of SR-30. Major access routes include these highways and the major surface streets in the surrounding area, including Tippecanoe Avenue, Mill Street and 3rd Street.

Victorville Airport/Southern California Logistics Airport

Southern California Logistics Airport (VCV), formerly George Air Force Base, is within the City of Victorville, surrounded by unincorporated areas of San Bernardino County and the cities of Victorville and Adelanto (Figure 3.9.2-1). It is approximately two miles east of Route 395, and three miles northwest of I-15. Major access routes include these highways and the major surface streets in the surrounding area, including Adelanto Road and Air Base Road.

March Air Reserve Base/March Inland Port

March Air Reserve Base / March Inland Port (March), formerly March Air Force Base, is located in the western portion of Riverside County east of and adjacent to I-215 and two miles south of SR-60 (Figure 3.9.2-1). The joint-use facility is bordered by the cities of Moreno Valley to the north and east, Riverside to the northwest, and Perris to the south. Major access routes include these freeways and the major surface streets in the surrounding area, including Van Buren Boulevard and Perris Boulevard.

Airport security planning is the joint responsibility of the federal Transportation Security Administration (TSA), the airlines, and the individual airports. Airports in the SCAG region have upgraded their security systems since 9/11 using a variety of strategies in conjunction with local, State, and federal law enforcement. However, a number of aviation vulnerabilities continue to persist. These included effective screening of passengers and baggage for threat objects and explosives, adequate controls for

limiting access to secure areas at airports, and adequate security for air traffic control computer systems and facilities.

Transportation Hazards

Based on average accident rates provided by Caltrans, transportation-related fatalities occur at an overall rate of 0.83 fatalities per 100 million vehicle miles traveled, taking into account the varying accident rates on different facility types (freeway, arterials) and travel modes (bus transit, rail transit). The two counties with the highest vehicle miles travelled, Los Angeles and Orange, have the lowest rates of fatalities per 100 million VMT, while the county with the lowest annual VMT, Imperial County, has the highest rate of fatalities per 100 million VMT (Table 3.17.2-10, *Total Vehicle Fatalities*). In 2012, the most recent date for which data is available, approximately 1,300 people died and over 6,000 were severely injured on roadways throughout the SCAG region. Data from the California Office of Transportation Safety (OTS) are provided for transportation injuries and fatalities in the SCAG region (Tables 3.17.2-11, *Total Victims Killed and Injured*; 3.17.2-12, *Total Bicycle Victims Killed and Injured*; 3.17.2-13, *Total Pedestrian Victims Killed and Injured*).

Safety, Security and Emergency Access

Southern California is home to significant natural disasters, including earthquakes, wildfires, flooding, and mudslides (discussed in **Section 3.7, *Geology and Soils***). Although natural disasters, such as earthquakes and hurricanes, have produced significant regional casualties and property damage, none had the serious disruption to national travel and the national economy as the September 11, 2001, terrorist attacks. The 9/11 attacks created a new awareness of the vulnerabilities of transportation fleets and facilities. As concern about the threat of terrorism and consequences of natural disasters has grown, government (at all levels) has taken new measures to secure the welfare of its citizens. Transportation and transit agencies throughout the United States are taking increasing steps to protect their facilities against the threats of crime, terrorist activity, and natural disasters.

A large-scale evacuation would be difficult in the SCAG region. The region already has severe traffic congestion and mobility issues. The region encompasses 38,000 square miles with a diverse geography,

ranging from dense urban areas, to mountain ranges, to vast deserts. The interdependency of the jurisdictions and organizations makes regional cooperation and coordination essential to security and emergency preparedness. Typically, no single agency is responsible for transportation security. At the local level, especially within transit agencies, safety may be handled within one office. However, it is far less likely that the security of a surface transportation mode is managed by one entity and that this entity is even controlled by the transportation organization. For example, highways and transit networks traverse multiple police jurisdictions, local fire departments generally fill the incident command role after terrorist events, regional command and control centers respond to both natural and intentional disasters, and federal agencies intervene as needed and based on specific guidelines such as the crossing of state boundaries.²⁷

The complexity of the SCAG region, with a range of potential terrorism targets, presents significant challenges in coordinating and implementing effective homeland security programs. The unexpected and complex nature of these natural and human-caused incidents require extensive coordination, collaboration and flexibility among all of the agencies and organizations involved in planning, mitigation, response and recovery.

Safety is defined as the protection of persons and property from unintentional damage or destruction caused by accidental or natural events. Safety of people and goods is one of the most important considerations in developing, maintaining, and operating our diverse transportation systems. Safety and concerns related to project implementation addresses how well the transportation system minimizes collisions in fatalities, property damages, through changes in modal or facility shifts. SCAG region has an extensive transportation system, with more than 70,000 miles of freeway and arterial lanes and 3,900 miles of bikeways. As of 2014, the region had 14.9 million licensed drivers and 11.8 million registered vehicles. As of 2012 (most recent year data was available), more than 1,300 people died and 121,000 were injured in traffic collisions in the region. Therefore, safeguarding the Southern California transportation safety to minimize accidents on-road for vehicles and pedestrians is an important focus of the region.

Security is defined as the protection of persons or property from intentional damage or destruction caused by vandalism, criminal activity or terrorist attacks. The Transportation Research Board has classified emergency events that affect transportation agencies into several categories (**Table 3.17.2-14, Transportation Security Vulnerabilities**).²⁸

Rail and Mass Transit

The dispersed nature and the daily volume of passengers using public transportation services, which include intercity passenger rail, commuter rail, subway systems, and bus transportation, make it an attractive target for terrorists and criminals. Today, regional transit in the SCAG region is comprised of:

- Approximately 640 bus routes
- Approximately 67 local bus (demand response and paratransit) operators
- Thirteen commuter express bus services
- Two subway lines and three light rail lines situated within Los Angeles County

The numbers of customers using public transportation each and every day creates ongoing challenges for enhancing security within transit environments. A number of plans have been implemented to provide for basic protection. In the early 1990s, the California Public Utilities Commission required that transit agencies operating rail systems prepare a comprehensive System Safety Program Plan (SSPP) that also included a security component. Since 2004, all transit agencies are required to include a security and emergency management plan, which details how the agency would coordinate with first responder (law enforcement and fire) agencies, their respective County Office of Emergency Services and the Statewide Standardized Emergency Management System (SSEMS).

International Border Crossings

Within the SCAG region, there are three international ports of entry along the Mexico–Imperial County border: two at Calexico (Calexico and Calexico-East); and, one at Andrade (near Yuma, Arizona). Traffic from these ports enters California on the I-8 corridor. U.S. Customs and the Border Protection Agency within the Department of Homeland Security (DHS) are charged with the management and control of the official ports of entry. Security planning includes local emergency services, as well as the CHP.

Caltrans District 11 has developed the California–Baja California Border Master Plan, which establishes a process to institutionalize dialogue among local, state and federal stakeholders in the United States and Mexico. A key objective was to develop criteria that can be used in future studies to coordinate and prioritize projects related to existing and new Ports of Entry (POEs), as well as roads leading to the California Mexico POEs. Security was a major consideration in the development of the Border Master Plan.

Maritime Ports

Southern California is served by three major deep-water seaports. These ports—Hueneme, Long Beach, and Los Angeles—handle Asia–North America trade and are served by the two major railroads and numerous trucking companies in Southern California (Figure 3.17.2-9, *Ports in the SCAG Region*). The Port of Hueneme, with its recent expansion, ranks as one of the premier automobile and agricultural product-handling facilities in California. The Ports of Long Beach and Los Angeles are full-service ports with facilities for containers, autos and various bulk cargoes. With an extensive landside transportation network, the three ports moved more than 310 million metric tons of cargo in 2010.^{29,30}

In particular, the San Pedro Bay Ports (Long Beach and Los Angeles) dominate the container trade in the Americas by shipping and receiving more than 11.8 million 20-foot Equivalent Units (TEUs) of containers in 2009.³¹ Together these two ports rank third in the world, behind Rotterdam and Hong Kong, as the busiest maritime ports.

Security at Seaports

The DHS has designated the seaports of Long Beach, Los Angeles, and Port Hueneme as at risk for potential terrorist actions.³² Security at the ports is the joint responsibility of the U.S. Coast Guard, the U.S. Customs and Border Protection Agency, federal and State Homeland Security offices, Port police agencies, Harbor Patrols and emergency service agencies. The U.S. Coast Guard leads the local Area Maritime Security Commission, which coordinates activities and resources for all port stakeholders.

The Port of Los Angeles has a dedicated police force, the Los Angeles Port Police, to patrol the area within the jurisdiction of the Port of Los Angeles. The Port Police enforce federal, State, and local public safety statutes, as well as environmental and maritime safety regulations, in order to maintain the free flow of commerce and produce a safe, secure environment that promotes uninterrupted Port operations. In addition, the Port Police partner with other law enforcement agencies, such as the Los Angeles Police Department, CHP, and Customs and Border Protection in the Cargo Theft Interdiction Program (CTIP), which investigates cargo theft, and the High Intensity Drug Trafficking Area, which targets drug trafficking at the Ports of Los Angeles and Long Beach. Furthermore, per the Maritime Transportation Security Act of 2002, the Port of Los Angeles works with the Coast Guard to develop security plans for facilities at the port.

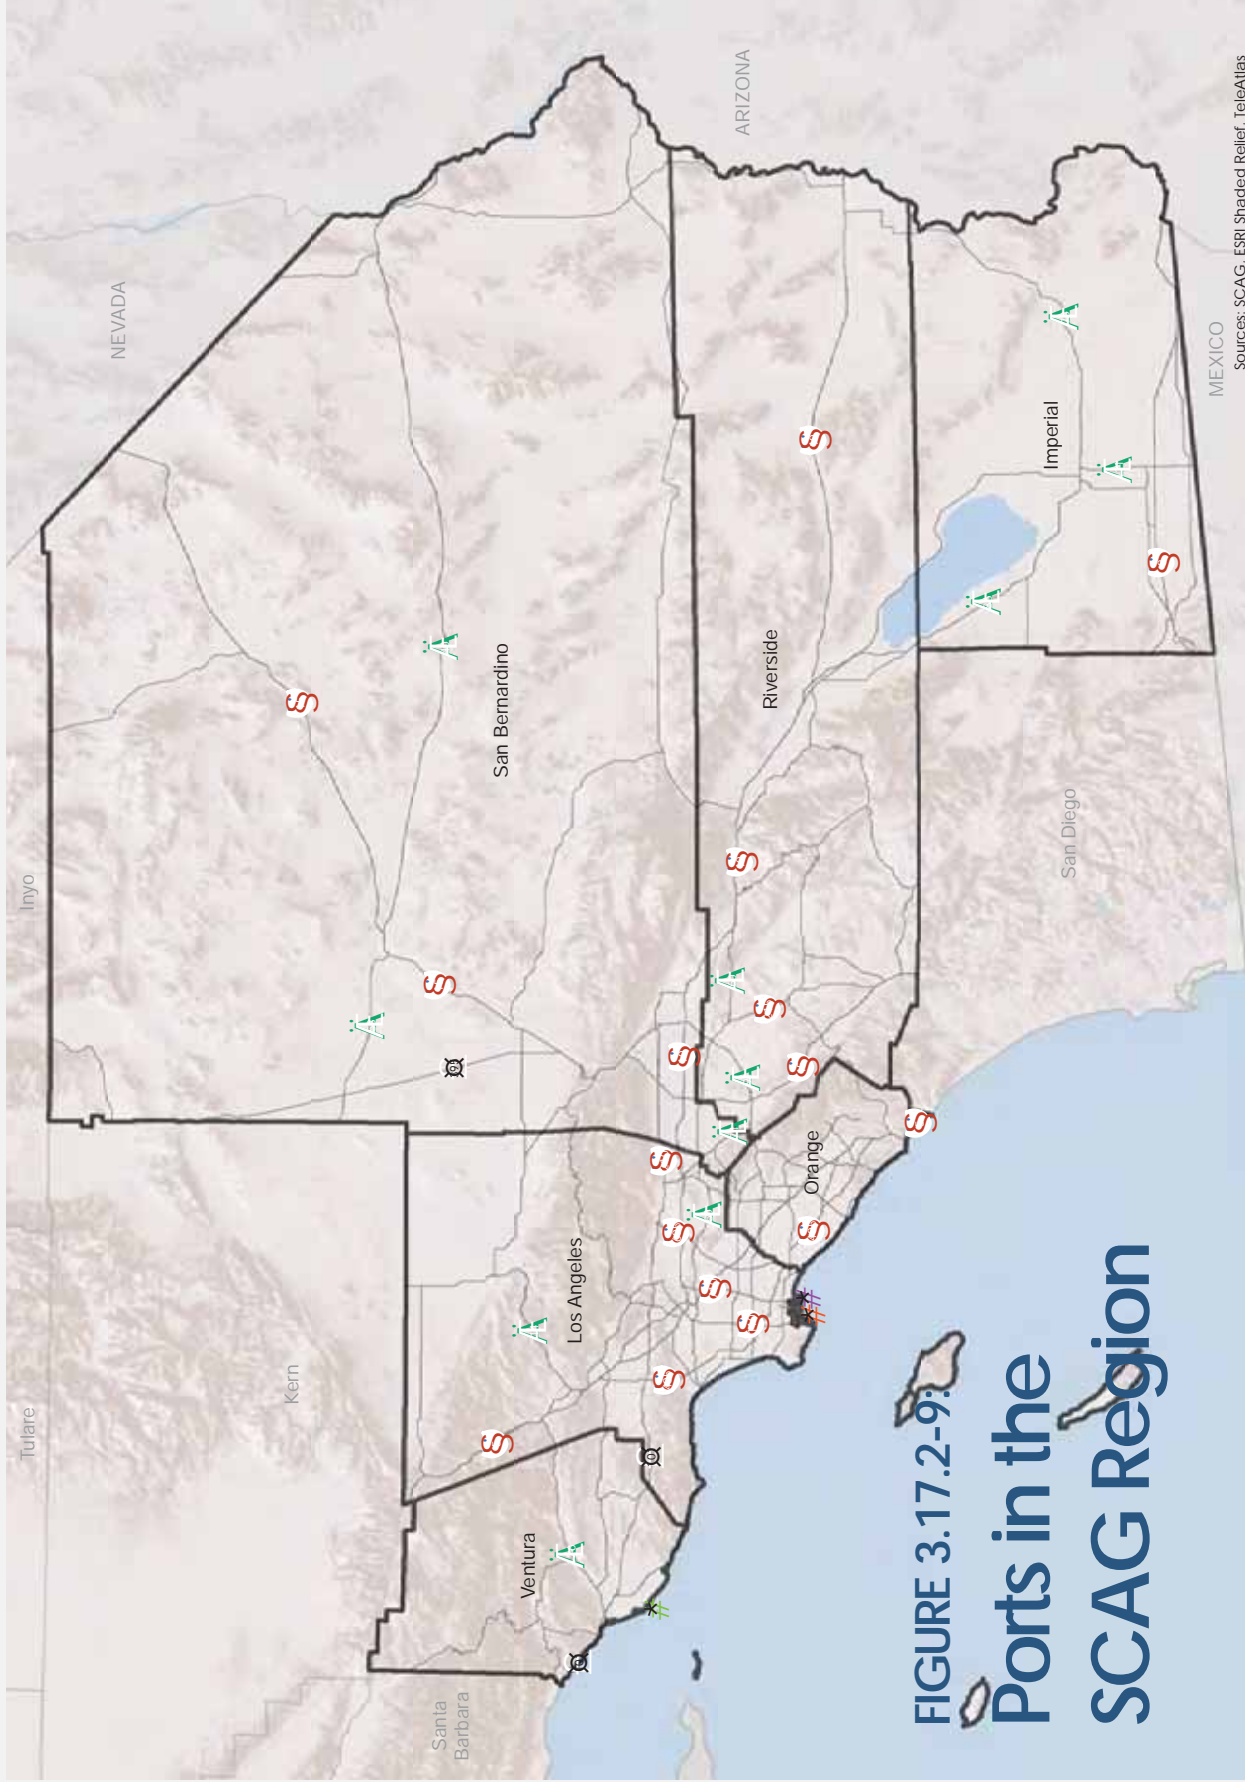

FIGURE 3.17.2-9:
Ports in the
SCAG Region

- Port**
- Hueneme
 - Long Beach
 - Los Angeles

Similar to the Port of Los Angeles, security at the Port of Long Beach entails physical security enhancements, police patrols, coordination with federal, State, and local agencies to develop security plans for the port area and investigate suspicious incidents, and obtaining federal funding to pay for these enhancements. As with the Port of Los Angeles, the Port of Long Beach works with the Coast Guard to develop security plans for facilities at the port. In contrast to the Port of Los Angeles, however, the Port of Long Beach does not have its own dedicated police force. Instead, the Long Beach Police Department is responsible for patrolling the port area. In doing so, the Port reimburses the Long Beach Police and Fire Departments for their port-related activities and expenses. The Port also funds its own Harbor Patrol to supplement law enforcement work conducted by other agencies such as the Coast Guard.

In addition to the above, several programs are in place to effectively monitor and screen seaport cargo. They include:

Investigations: The federal Container Security Initiative (CSI) directs Customs agents, working with host governments, to inspect and examine all cargo containers deemed high-risk before they are loaded on U.S.-bound vessels. The CSI contains four core elements: identifying high-risk containers, pre-screening containers before they reach U.S. ports of entry, using technology to prescreen high-risk containers and developing and using smart and secure containers.

Inspections: The 24-hour rule requires manifest information on cargo containers to be delivered to U.S. Customs 24 hours before the container is loaded onto a vessel in a foreign port. Customs has the right to stop any container from being loaded, for any reason, while the container is still overseas.

Partnerships: Most of the largest U.S. importers and their trading partners participate in the Customs-Trade Partnership Against Terrorism (C-TPAT), a public-private partnership designed to improve security standards throughout the cargo supply chain.

Technology: U.S. Customs uses X-ray, gamma ray and radiation-detection devices to screen incoming cargo at U.S. ports.

3.17.3 THRESHOLDS OF SIGNIFICANCE

Consistent with Appendix G of the CEQA Guidelines, the following specific thresholds were developed by SCAG based on precedence as appropriate thresholds by which to determine significant impacts on transportation, traffic and security:

- Conflict with the established measures of effectiveness for the performance of the circulation system, by increasing the daily VMT, taking into account all modes of transportation including mass transit and non-motorized travel and relevant components of the circulation system, including but not limited to intersections, streets, highways and freeways, pedestrian and bicycle paths, and mass transit;
- Conflict with an applicable congestion management program, including, but not limited to, VMT and travel demand measures, or other standards established by the County congestion management agency for designated roads or highways;
- Result in a significant change in air traffic patterns, including either an increase in air traffic levels or a change in location that results in substantial safety risks;

- Substantially increase hazards due to a design feature (e.g., sharp curves or dangerous intersections), increased volumes or incompatible uses (e.g., farm equipment);
- Result in inadequate emergency access; and
- Result in conflict with adopted policies, plans, or programs regarding public transit, bicycle, or pedestrian facilities, or otherwise decrease the performance or safety of such facilities.

Methodology

The methodology for determining the significance of impacts on transportation, traffic, and safety impacts compares current regional transportation conditions to expected future 2040 conditions with the Plan, as required by Section 15126.2(a) of the State CEQA Guidelines. SCAG utilized the Regional Travel Demand Model (RTDM) to compare the existing conditions to the Plan's 2040 potential build out. Total daily VMT is used as a measure of overall utilization of roadways which relates to vehicle emissions, traffic congestion, and the effectiveness of land use patterns and alternate mode options in reducing the need for vehicular travel. Vehicle hours of delay (VHD) measures the congestion level of the roadway. Other measures such as percentage of peak period work trips completed in 45 minutes and transportation system accident rates measure the effect of other modal choices from automobile (single and high occupancy vehicles) to transit. Percentage fatality accident rate also look at safety of motorized to non-motorized modes (bicycling and walking). The performance measure output for the Plan's horizon year 2040 was compared to the existing regional conditions for each significance criterion to determine the significance of impacts. The 2040 transportation model output provides a regional and cumulative level of analysis for the impacts of the Plan on transportation, traffic and safety.

The significance of impacts was determined by applying the significance criteria above to compare current regional transportation conditions to expected future conditions with the Plan. The RTDM provides performance data for future Plan conditions. The performance measure output for year 2040 with the Plan was compared to the existing regional conditions for each significance criterion to determine the significance of impacts. The 2040 transportation model output provides a regional and cumulative level of analysis for the impacts of the Plan on transportation resources.

3.17.4 IMPACT ANALYSIS

IMPACT TRA-1: Potential to conflict with the established measures of effectiveness for the performance of the circulation system, by increasing the daily VMT, taking into account all modes of transportation including mass transit and non-motorized travel and relevant components of the circulation system, including but not limited to intersections, streets, highways and freeways, pedestrian and bicycle paths, and mass transit.

Significant Impact

Transportation projects and land use strategies considered in 2016 RTP/SCS the 2016 RTP/SCS has the potential to conflict with the established measures of effectiveness for the performance of the

circulation system, by increasing per capita VMT and increase delay over the baseline condition, constituting a significant impact. VMT has been used throughout the development of the Plan and directly relate to the performance of the region's transportation system. Total VMT in 2040 have the potential to increase when compared to current daily VMT. Due to increasing costs and environmental concerns, the expansion of highways and local arterials has not been keeping pace with the growing population. Critical gaps in the transportation network that hinder access to certain parts of the region and/or hinder efficient regional operations currently exist. Locally-developed county transportation plans have identified projects to close these gaps and complete the system, and they are included in the Plan. These projects include the Limited Access Expressway SR-115 in Imperial County, the SR-710 Gap Closure in Los Angeles County, the High Desert Corridor in Los Angeles and San Bernardino Counties, the SR-241 Improvements in Orange County, the CETAP Inter-county Corridor A in Orange and Riverside Counties, and the U.S. 101 and SR-118 Improvements in Ventura County.

Heavy investment in HOV and HOT lanes has given the region one of the nation's most comprehensive HOV and experimental HOT networks and highest rideshare rates. The 2016 RTP/SCS proposes strategic HOV gap closures and freeway-to-freeway direct HOV connectors to complete the system. Another key HOV strategy in the Plan is the conversion of certain HOV lanes in the region to allow for continuous access. Orange County has taken a leadership role on this over the past few years, and their recent studies have concluded that continuous-access HOV lanes do not perform any worse than limited-access HOV lanes.³³ At the same time, they provide carpoolers with greater freedom of movement in and out of HOV lanes. Highlights of these projects are projected to be completed by 2040, include various I-5 HOV projects in Los Angeles and Orange County, SR-73 HOV lane conversion from I-405 to MacArthur Boulevard, I-15 from SR-74 to I-215 Interchange in Riverside County, I-210 HOV from I-215 to I-10 in San Bernardino County, US-101 HOV project from Moorpark Road to Wendy Drive in Ventura County, and the I-405/SR-74 connector in Orange County.

Local streets and roads account for over 80 percent of the total road network and carry almost 50 percent of total traffic.³⁴ They serve different purposes in different parts of the region, or even in different parts of the same city. Many streets serve as major thoroughfares or even alternate parallel routes to congested freeways. At the same time, street right-of-ways often support different modes of transportation besides the automobile, including bicycles, pedestrians, and transit. The Plan contains a host of arterial projects and improvements to achieve different purposes in different areas. In all parts of the region, it includes operational and technological improvements to maximize system productivity in a more cost-effective way than simply adding capacity. Such strategic improvements include spot widening, signal prioritization, driveway consolidation and relocation, and grade separations at high-volume intersections.

While the Plan's multimodal strategy aims to reduce per capita VMT over the next 25 years, total demand to move people and goods would continue to grow due to the region's population increase. A strategic expansion of the transportation system is needed in order to provide the region with the mobility it needs. The Plan targets this expansion around transportation systems that have room to grow, including transit, improved rail sections, active transportation, express lanes, and goods movement network system. Some of these systems, such as transit, active transportation, and express

³³ *Los Angeles Times*. November 2014. California Commute: Orange County Takes Continuous-Access Approach on Carpool Lanes.

³⁴ Southern California Association of Governments. December 2015. *Draft 2016 Regional Transportation Plan/Sustainable Communities Strategy*.

lanes, have proven over the years to be a reliable and convenient form of transportation for those who are able to easily access it.

The Plan calls for a substantial expansion of transit facilities and service over the next 25 years. While these capital projects would provide the SCAG region with a much more mature public transportation system, operational improvements and new transit programs and policies would also contribute greatly to attracting more trips to transit and away from single-occupant vehicle travel. First, the expanding HOV and express lane networks calls for the development of an extensive express bus point-to-point network. Second, transit oriented and land use development strategies call for increasing the frequency and quality of fixed-route bus service by virtue of adding new bus rapid transit service, limited-stop service, increased frequencies along targeted corridors, and the introduction of local community circulators to provide residents of smart growth developments with the option of taking transit over using a car to make short, local trips.

The Plan suggests three passenger rail strategies that would provide additional travel options for long-distance travel within the region and to neighboring regions. These are improvements to the Los Angeles to San Diego Corridor (LOSSAN), improvements to the existing Metrolink system, and other rail system improvements.

The recent release of the 2014 CA HST Business Plan confirmed the funding and implementation challenges of the project. The 2014 CA HST Business Plan now estimates a Phase I cost of \$68 billion (in year of expenditure dollars) with service extended to the region in 2033³⁵. Within the draft CA HST Business Plan, there are a variety of strategies to connect Northern and Southern California to the State network. The Business Plan assumes that Southern California would be connected to the network in 2033, but that incremental improvements can be made in advance of and in preparation for that connection.³⁶ Therefore, stakeholders throughout Southern California are seeking to improve California's rail system and improve the region's commuter and intercity rail services.

Conversion of existing HOV lanes to HOT lanes has demonstrated to improve traffic flow. Los Angeles Metro Express Lanes pilot program is an example where mobility partners have cooperated to provide enhanced options on the I-10 and I-110 Freeways. Results from this effort have shown travel time savings, and increase in trip reliability, reduced congestion and GHG emissions.

Another emphasis on transit network improvements includes transit priority facilities, such as bus lanes and traffic signal priority. The region has a minimal amount of bus lanes, when compared to other major metropolitan areas. The Los Angeles County Metro Rapid Bus network employs bus signal priority that gives buses up to ten percent more green light time from the normal green light phase. The Plan recommends that the network should be expanded to other counties in the region. Additional recommended enhancements to the region's transit services include expanding bike-carrying capacity on transit vehicles, implementing regional and inter-county fare agreements and media, such as LA County's EZ Pass, and expanding and improving real-time passenger information systems.

Active transportation refers to transportation such as walking or using a bicycle, tricycle, velomobile, wheelchair, scooter, skates, skateboard, push scooter, trailer, hand cart, shopping car, or similar

³⁵ California High Speed Rail Authority (CHSRA). February 2014. *Draft 2014 Business Plan*.

³⁶ California High Speed Rail Authority (CHSRA). February 2014. *Draft 2014 Business Plan*.

electrical devices. The two most common forms of active transportation are bicycling and walking. Walking and bicycling are essential parts of the SCAG transportation system and could help reduce roadway congestion. As the region works towards reducing congestion, active transportation would become more essential to meet the future needs of residents within the SCAG region.

The baseline conditions for 2015 were based on the 2012 base year transportation network, as modified to include project information from the 2015 Federal Transportation Improvement Program (FTIP) adopted in September 2014 and approved by Federal Highway Administration in December 2014, as well as projects listed in the 2012 RTP/SCS, as last amended in September 2014, thus providing the most accurate characterization possible of the baseline conditions in 2015. Substantial growth and development is anticipated to occur within the region between 2016 and 2040. Despite the regional planning efforts to reduce per capita VMT, predicted growth would increase the total amount of VMT. Average daily VMT is expected to grow from 448 million miles in 2012 to 504 million miles per day in 2040 (Table 3.17.4-1, *Daily Vehicle Miles Traveled in 2012 and 2040*). This change constitutes a 13.3 percent increase over this period and includes light, medium and heavy-duty vehicle VMT in all six counties. The greatest percentage increase in VMT would occur in Imperial County followed by Riverside County.

**TABLE 3.17.4-1
DAILY VEHICLE MILES TRAVELED IN 2012 AND 2040***

County	In Thousands		
	2012 Base Year*	2040 No Project	2040 Plan

SOURCE:

SCAG modeling, 2015.

Based on the transportation data provided by SCAG and based on forecasts developed using the RTDM and validated to standards in the California Transportation Commission RTP Guidelines, the Plan would decrease overall VMT compared to the No Project scenario, by 36,000 VMT. Emissions associated with increased VMTs would be heavily experienced on roadways, highways, and freeways at all six County regions throughout SCAG. A better mix of residential, employment, education, and service uses is necessary to allow people to accomplish their daily activities with less driving, and decrease the total amount of VMT. Policies that aim to charge drivers user fees to cover the cost of services they use can be effective in lowering emission and delays from increased VMTs. Nevertheless, this increase in VMT would constitute a significant impact requiring the consideration of mitigation measures.

IMPACT TRA-2: Potential to conflict with an applicable congestion management program, including, but not limited to, VMT and travel demand measures, or other standards established by the County congestion management agency for designated roads or highways.

Significant Impact

The transportation projects and land use strategies considered in the 2016 RTP/SCS have the potential to conflict with the established measures of effectiveness for the performance of the circulation system due to the increase in VMT, potentially constituting a conflict with the adopted County CMPs, within the SCAG Region, and their respective measures, constituting a significant impact.

Nevertheless, the Plan would contribute to a decrease in VHD within the SCAG region. Consistent with provisions of Section 15091 of the State CEQA Guidelines, relevant County Congestion Management Plan, and Circulation Elements of relevant County and City General Plans, SCAG shall facilitate encouraging measures to further reduce overall VHD by dispersing roadway and highway congestion hotspots with the utilization of HQTAs. HQTAs is a land use strategy within one-half mile of a fixed guideway transit stop or bus transit corridors where buses pick up passengers every 15 minutes or less during peak commute hours. With the utilization of HQTAs overall impacts to regional transportation system is lessened when comparing the future Plan with existing conditions. In accordance to SCAG modeling, total daily VHD would decrease from 2,500,000 vehicle-hours in 2012 to 2,118,000 vehicle-hours in 2040 (Table 3.17.4-2, *Total Daily Hours of Delay in 2012 and 2040*). This constitutes a decrease from existing conditions and includes light, medium and heavy-duty vehicles VHD in all six counties. Delay would decrease in Los Angeles, Orange, and Ventura Counties and increase in Imperial, Riverside, and San Bernardino Counties. Regional delays in terms of hours from vehicular trips would decrease by 13 percent by 2040.

**TABLE 3.17.4-2
TOTAL DAILY HOURS OF DELAY IN 2012* AND 2040**

County	In Thousands of Vehicle-Hours		
	2012 Base Year*	2040 No Project	2040 Plan
Imperial	1	8	7
Los Angeles	1,642	2,087	1,321
Orange	433	536	289
Riverside	162	473	214
San Bernardino	192	589	219
Ventura	70	137	67
Regional	2,500	3,831	2,118

NOTE:

Numbers are rounded to nearest thousand.

*Please note that 2012 base year transportation network includes the 2015 project information from the 2015 Federal Transportation Improvement Program (FTIP) adopted in September 2014 and approved by Federal Highway Administration in December 2014, as well as projects listed in the 2012 RTP/SCS as last amended in September 2014

SOURCE:

SCAG modeling, 2015.

Despite the overall regional decrease and dispersion of vehicular congestion, impacts would remain significant.

A greater amount of time delay is experienced in corridors (roadway and highways) that are frequently used by good movement related heavy-duty trucks. Despite the regional planning efforts to improve the efficiency of the goods movement system, an increased demand for goods would lead to increase in use on the roadway network under the Plan. Total daily heavy-duty truck trip VHD would increase from 118,000 average VHD in 2012 to 184,000 average VHD in 2040, or a difference of 66,000 VHD (Table 3.17.4-3, *Daily Heavy Duty Truck Trip Hours of Delay in 2012 and 2040*). This future 2040 Plan condition constitutes a 36 percent increase from existing condition. This increase in VHD would result in an exacerbation of the system capacity and hinder consistent traffic flow. Therefore, frequently used corridors for heavy-trucks such as the I-710 and surrounding communities are at risk of lower levels of service without proper mitigation measures to curb congestion.

**TABLE 3.17.4-3

SOURCE:

SCAG modeling, 2015.

NOTE:

* Please note that 2012 base year transportation network includes the 2015 project information from the 2015 Federal Transportation Improvement Program (FTIP) adopted in September 2014 and approved by Federal Highway Administration in December 2014, as well as projects listed in the 2012 RTP/SCS as last amended in September 2014

SCAG and the six Counties have worked towards the development of a metropolitan-wide strategy for new and existing transportation facilities eligible for funding under Title 23 U.S.C, and Title 49 U.S.C., to optimize the transportation system for safety and improve effectiveness. This strategy includes the development of a coherent and integrated regional goods movement system. Strategies include a Regional Freight Corridor System which would create a system of truck-only lanes for major freeway systems that are affected by haul trucks used for the goods movement; a Truck Bottleneck Relief Strategy which would mitigate top-priority truck bottlenecks; a Rail Strategy which would allow shippers the ability to move over long distances at lower costs, utilizing efficient rail strategies to include expansion and modernization of intermodal facilities; a Good Movement Environmental Strategy which would focus on a two-pronged approach for achieving an efficient, safe and economically sound freight system that reduces environmental impacts.

In order to meet federal certification requirements, SCAG and county CMAs, specifically LA County Metro, OCTA, RCTC, SANBAG, and VCTC are developing means to monitor and maintain the existing roadway infrastructure through demand reduction techniques, land-use and operation management strategies, and strategic capacity enhancement strategies. Additional strategies include supporting land

use policies aim to focus growth in HQTAs with enhanced opportunities for Southern California residents to access destinations without the use of an automobile. This would reduce, but not eliminate, at-capacity or near-capacity conditions (LOS E and LOS F) on roadways within the region. However, congestion would be diverted and increase in public transit within HQTAs would occur.

SCAG has also worked with local CMAs to support strategies for diversifying mode choices by encouraging public transit use and non-motorized forms of commute such as walking and other active transportation in the Plan. While the actual benefits of these alternative and active transportation modes are modest, SCAG transportation modeling indicates a potential to overall improvement in peak period work trips completed within 45 minutes by personal vehicle or by other transit with implementation of the Plan. In order to determine these findings, PM peak period work trips were used to assess impacts to work commute as PM trips are prone to the greatest amount of vehicle delay. To assess impacts, 45 minutes for work trips were used as a benchmark to analyze commute lengths for both by personal vehicle and other transit modes.

Over 80 percent of the Existing PM peak period work trips would take 45 minutes or less by single occupancy vehicle, 74.2 percent of the Existing PM peak period work trips would take 45 minutes or less by high occupancy vehicle, and 28.5 percent would occur within 45 minutes by transit (*Table 3.17.4-4, Percentage of PM Peak Period Work Trips Complete within 45 minutes*).

In 2040, with the implementation of the Plan, 89.1 percent of the PM peak period work trips would take 45 minutes or less by single occupancy vehicle, 80.2 percent of the PM peak period work trips would take 45 minutes or less by high occupancy vehicle, and 30.1 percent would occur within 45 minutes by transit. The increase in vehicles achieving 45 minutes travel time by all modes of transportation would occur with the implementation of the Plan. As such, this improvement is considered regionally beneficial in reducing congestion and improving level of service on roads associated with work commutes.

*Please note that 2012 base year transportation network includes the 2015 project information from the 2015 Federal Transportation Improvement Program (FTIP) adopted in September 2014 and approved by Federal Highway Administration in December 2014, as well as projects listed in the 2012 RTP/SCS as last amended in September 2014.

SOURCE:

SCAG modeling, 2015.

Despite the benefits shown by implementing the Plan, the transportation projects and land use strategies considered in the 2016 RTP/SCS have the potential to conflict with the established measures of effectiveness for the performance of the circulation system due to the increase in VMT, potentially posing a conflict with the adopted County CMPs, within the SCAG Region, and their respective measures, constituting a significant impact requiring the consideration of mitigation measures.

IMPACT TRA-3: Potential to result in a significant change in air traffic patterns, including either an increase in air traffic levels or a change in location that results in substantial safety risks.

Less than Significant Impact

Based on the statistics in SCAG's aviation forecast, there is adequate capacity in provisioning for goods and passenger services, thus the 2016 RTP/SCS would be expected to result in impacts that are below the level of significance to air traffic patterns. The Plan would not in itself affect air traffic patterns. However, increased or dispersed population that would occur by 2040 would likely result in increased air traffic in all nine major commercial airports in Southern California as listed above in Table 3.17.2-9. According to the Plan, the regional-level air passenger demand forecast would be 136.2 million annual passengers (MAP) by 2040 (Figure 3.17.4-1, *Anticipated Future Passenger Demands at Major Southern California Airports*). This forecast is approximately 7 percent lower than the 2012 RTP/SCS's 145.9 MAP projection for the year 2035. The Plan's air cargo demand is more conservative in comparison to the 2012 RTP/SCS. In 2012 RTP/SCS, the demand for air cargo was estimated as 5.61 million tons, while the 2016 RTP/SCS is projecting approximately 3.78 million tons.³⁷ The 2016 RTP/SCS land use strategies aim to focus and influence new growth in HQTAs and Transit Priority Areas (TPAs) in locations away from airport clear zones and potential accident zones. Encouraging growth in HQTAs and TPAs would decrease the number of Southern California residents exposure to potential safety risks associated with air traffic.

The Plan would also recommend strategies which would support the regionalization of air demand; support regional and inter-regional projects that facilitate airport ground access; local land use efforts; development and use of transit access to the region's airports; encourage use of modes with high average vehicle occupancy; and discourage use of modes that require "deadhead" trips to/from airports. Implementation of these recommendations would avoid public safety issues associated with flight paths and safety issues as a result of collisions and congestion. Impacts would be less than significant.

IMPACT TRA-4: Potential to substantially increase hazards due to a design feature (e.g., sharp curves or dangerous intersections), increased volumes or incompatible uses (e.g., farm equipment).

Less than Significant Impact

In accordance with the provisions governing hazard designs from the Southern California ITS, the Plan would not result in and overall increase hazards due to design features or increase conflicts between incompatible uses, and impact would be less than significant. The 2016 RTP/SCS land use strategies aim to focus growth in HQTAs and TPAs. These land use strategies are generally located away from high-speed facilities where potential hazards due to design features tend to be high. Moreover, development in HQTAs would increase the number of Southern California residents in proximity to transit and in areas with good opportunities for walking and biking, making it imperative to design facilities with bike racks,

Anticipated Future Passenger Demands at Major Southern California Airports

Major Airport

MAP= Million Annual Passengers

improved sidewalks, bikeways and greenways, and transit stations to promote pedestrian and other forms of active transportation.

The Plan includes Transportation System Management strategies to improve safety through reducing the concentration of erratic driving patterns and the clearing of incidents and accidents in a quick manner. As shown in Table 3.17.4-5, *Existing and 2040 Regional Transportation System Accident Rates*, implementation of the Plan would result in a system-wide daily injury rate of 12.93 injuries per million persons for all travel modes, which would be a decrease of 5.34 daily injuries per million persons when compared to the existing rate of 18.27, consistent with the goals and the actions outlined in the California Strategic Highway Safety Plan. Implementation of the Plan would potentially result in a system-wide daily fatality rate of 0.17 fatalities per million persons for all travel modes, a decrease of 0.03 daily fatalities per million persons when compared to the existing rate of 0.20.

SCAG modeling, 2015.

NOTE:

* Please note that 2012 base year transportation network includes the 2015 project information from the 2015 Federal Transportation Improvement Program (FTIP) adopted in September 2014 and approved by Federal Highway Administration in December 2014, as well as projects listed in the 2012 RTP/SCS as last amended in September 2014.

The Plan includes strategies to encourage a complete streets approach to roadway improvements. The Plan also encourages the design of facilities to enhance the safety of riders, bicyclists, and pedestrians and minimize hazards. Education and encouragement informing the public regarding safe routes to schools and other safety campaigns would also occur. Impacts from increase hazards due to a design feature or incompatible attributes are less than significant.

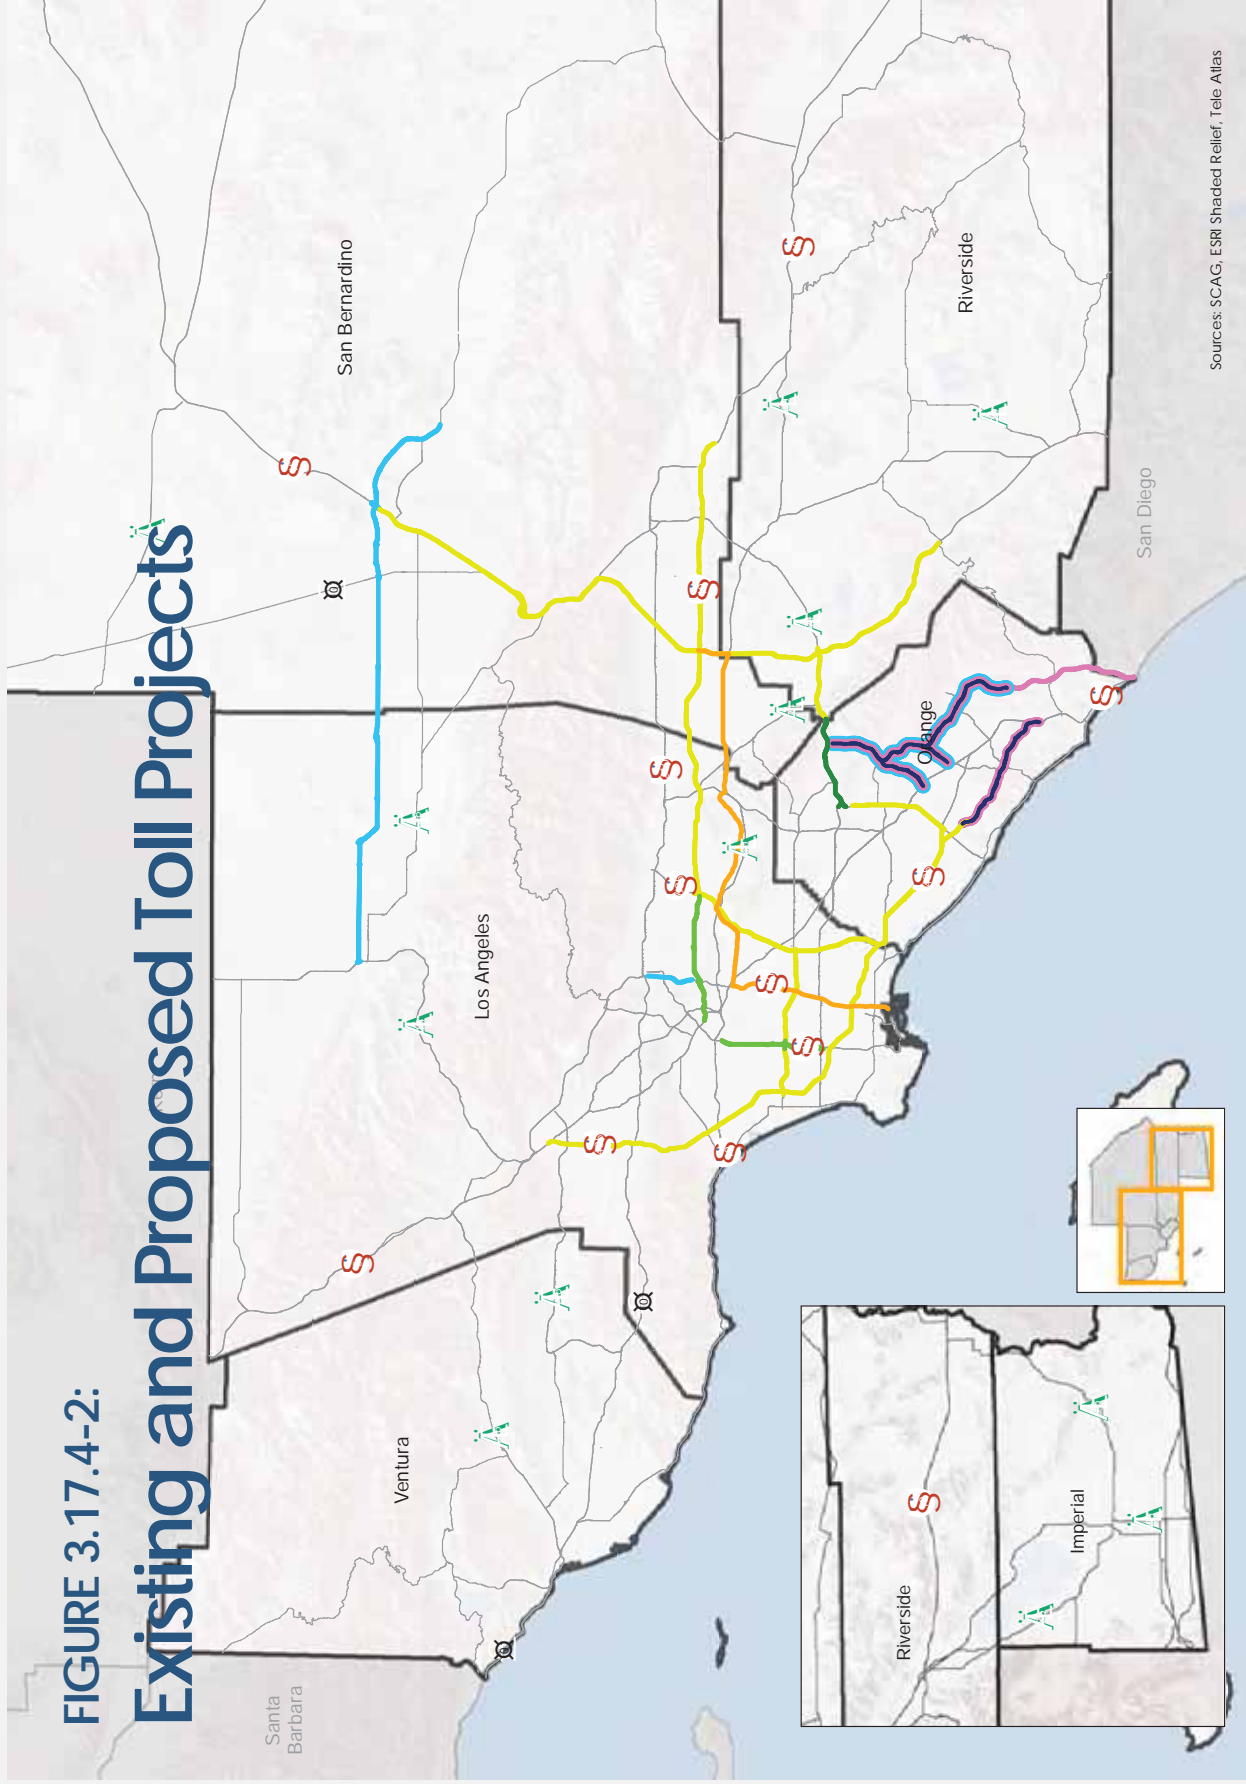

IMPACT TRA-5: Potential to result in inadequate emergency access.

Significant Impact

The transportation and land use strategies considered in the 2016 RTP/SCS have the potential to conflict with emergency access criteria, constituting a significant impact. One of the primary goals of 2016 RTP/SCS the 2016 RTP/SCS is to improve the mobility and improve accessibility to destinations. Chapter 5 of the 2016 RTP/SCS, appropriately titled “a Plan for Mobility, Sustainability, and a High Quality of Life,” provides a discussion on how to best meet the region’s population demand which is projected to grow by more than 20 percent (approximately 18 million people to more than 22 million) people in all types of communities from urban centers, cities, towns, to suburban neighborhoods. Additional provisions are stated to assist the region in remaining as a vital gateway for goods and services so residents can enjoy a high quality of life complemented by easily accessible transportation options, well-maintained infrastructures, and reduced congestion on highways and arterials, express and toll lane network, public transit and active transportation (Figure 3.17.4-2, *Existing and Proposed Toll Projects*). Depending on the timing, location, and duration of construction activities, several of the proposed

FIGURE 3.17.4-2:

Existing and Proposed Toll Projects

transportation projects (including grade crossings, arterials, interchanges, and auxiliary lanes), would result in delayed emergency vehicle response times or otherwise disrupt delivery of emergency response services, could occur. For example, closing off one or more lanes of a roadway, emergency routes would be impaired. The closure of these lanes could potentially cause traffic delays and ultimately prevent access to calls for service. Coordination within local jurisdictions can and should be taken to maintain adequate emergency access for ambulance services and other public safety services in the design of projects entailed by the Plan. Construction and operation of the transportation projects, and related development projects associated with the land use strategies considered in the 2016 RTP/SCS would have the potential to conflict with emergency access plans, constituting a significant impact, requiring the consideration of mitigation measures.

IMPACT TRA-6: Potential to result in conflict with adopted policies, plans, or programs regarding public transit, bicycle, or pedestrian facilities, or otherwise decrease the performance or safety of such facilities.

Less than Significant Impact

The transportation projects and land use measures considered in the 2016 SCAG RTP/SCS encourages the adoption of policies to encourage public transit, bicycle, or pedestrian facilities, and would be expected to result in less than significant impacts. The Plan is consistent with provisions of Section 15091 of the State CEQA Guidelines, SCAG Active Transportation Plan, Passenger Rail and Transit Plans, and would not result in conflict with the regulation on non-motorized transit and pedestrian facilities. The 2016 RTP/SCS includes a series of individual improvement projects and program, including public transit, bicycle and trail, and pedestrian improvements projects, to enhance Southern California's multi-modal transportation system. The proposed 2016 Active Transportation Plan has developed goals for increasing bikeway miles by increasing commute mode sharing of bicycles and pedestrian activity and by improving active transportation pathways to public transit (including ADA compliant pathways). Additionally, the Plan recommends that development influenced by land use strategies, provide an increased amount of bicycle parking increase this mode of transportation. As shown on **Table 3.17.4-6**, it is anticipated that the region would expect up to 34.5 percent of total trips in the forms of active transportation and public transit by 2040. This is a substantial increase when compared with the 26.8 percent without the Plan in 2040, and 25.9 percent at the existing baseline. To achieve implementation of these goals, SCAG will collaborate with other transportation agencies, local and regional government, and the California Active Transportation Program to implement a sustainability program in the six counties region. Currently, the shares of walking and biking in SCAG region combined is approximately 12 percent of the total modes available. SCAG is currently working with local jurisdictions to increase this percentage to approximately 16 percent (**Table 3.17.4-6**). With all the measures included in the Plan to improve public access to transit, improve safety, and encourage Active Transportation, the Plan would reduce impacts related to transportation fatality. The Plan would promote active modes of transportation and would be in congruence with the performance requirements of the public transit, bicycle, and pedestrian facilities.

**TABLE 3.17.4-6
PERCENTAGE OF MODE SHARE ON TRANSIT AND ACTIVE TRANSPORTATION**

Mode Share	2012*	2040 No Project	2040 Plan
Walk	10.6	10.7	13.5
Bike	1.3	1.6	2.2
Active Transportation	11.9	12.3	15.7
Transit	2.1	2.2	3.1
Total	25.9	26.8	34.5

SCAG modeling, 2015.

NOTE:

* Please note that 2012 base year transportation network includes the 2015 project information from the 2015 Federal Transportation Improvement Program (FTIP) adopted in September 2014 and approved by Federal Highway Administration in December 2014, as well as projects listed in the 2012 RTP/SCS as last amended in September 2014.

3.17.5 CUMULATIVE IMPACTS

IMPACT TRA-1: Potential to conflict with the established measures of effectiveness for the performance of the circulation system, by increasing the daily VMT, taking into account all modes of transportation including mass transit and non-motorized travel and relevant components of the circulation system, including but not limited to intersections, streets, highways and freeways, pedestrian and bicycle paths, and mass transit.

Significant Cumulative Impact

The 2016 RTP/SCS, in addition to other projects from other regional plans (e.g., RTPs of adjacent jurisdictions), could result in additional impacts inside and outside the SCAG region. Therefore, when considered with other projects outside the region, the Plan would have the potential to conflict with established performance of the circulation system by increasing overall VMT, constituting a significant cumulative impact requiring the consideration of mitigation measures.

IMPACT TRA-2: Potential to conflict with an applicable congestion management program, including, but not limited to, VMT and travel demand measures, or other standards established by the County congestion management agency for designated roads or highways.

Significant Cumulative Impact

The 2016 RTP/SCS, in addition to other projects from other regional plans (e.g., the Air Quality Management Plan and RTPs of adjacent jurisdictions), could result in additional impacts inside and outside the SCAG region. The Plan, when considered with other plans in the region, would potentially contribute to a cumulatively considerable amount of increased VMT and VHD from areas outside the

SCAG region, including Kern County and San Diego. As mentioned previously, the RTDM analyzes the population, households, and employment projected for 2040, which is anticipated to be the year with the largest demand on the transportation system expected during the lifetime of the Plan. In accounting for the effects of regional growth, the model output provides a long-term and cumulative level of analysis for the impacts of the Plan on transportation resources. Forecasted urban development and growth that would be accommodated by the transportation investments in the Plan and increased mobility provided by the Plan would contribute to the significant impacts. Therefore, when considered with other additional projects outside the region, the Plan would have the potential to conflict with established performance of the circulation system by increasing overall delays and congestion, constituting a significant cumulative impact requiring the consideration of mitigation measures.

IMPACT TRA-3: Potential to result in a significant change in air traffic patterns, including either an increase in air traffic levels or a change in location that results in substantial safety risks.

Less than Significant Cumulative Impact

Based on California's overall aviation forecast, there is adequate capacity in provisioning for goods and passenger services. The Plan would not in itself affect air traffic patterns. However, increased or dispersed population that would occur by 2040 would likely result in increased air traffic in all nine major commercial airports in Southern California. Other RTPs also would recommend strategies which would support the regionalization of air demand; support regional and interregional projects that facilitate airport ground access; local land use efforts; development and use of transit access to the region's airports; encourage use of modes with high average vehicle occupancy; and discourage use of modes that require "deadhead" trips to/from airports. Implementation of these recommendations would avoid public safety issues associated with flight paths and safety issues as a result of collisions and congestion. Therefore, when considered with other additional projects outside the region, the Plan would result in less than significant cumulative impacts with respect to air traffic patterns.

IMPACT TRA-4: Potential to substantially increase hazards due to a design feature (e.g., sharp curves or dangerous intersections), increased volumes or incompatible uses (e.g., farm equipment).

Less than Significant Cumulative Impact

In accordance with the provisions governing hazard designs from the ITS, the Plan and other projects in the region would not result in an overall increase in hazards due to design features or increase conflicts between incompatible uses. The land use strategies of other RTPs outside the SCAG region also aim to focus growth in HQTAs and TPAs. These land use strategies are generally located away from high-speed facilities where potential hazards due to design features tend to be high. Moreover, development in HQTAs would increase the number of California residents in proximity to transit and in areas with good opportunities for walking and biking, making it imperative to design facilities with bike racks, improved sidewalks, bikeways and greenways, and transit stations to promote pedestrian and other forms of active transportation. The Plan aims to facilitate such design measures. Therefore, the Plan would result in a less than significant cumulative impact with respect to hazards.

IMPACT TRA-5: Potential to result in inadequate emergency access.

Significant Cumulative Impact

The transportation and land use strategies considered in the 2016 RTP/SCS and other RTPs in surrounding areas have the potential to conflict with emergency access, constituting a significant impact. While there are provisions in many other RTPs outside the SCAG region to offer connectivity in terms of goods and services so residents can enjoy a high quality of life complemented by easily accessible transportation options, the timing, location, and duration of construction activities from transportation projects including grade crossings, arterials, interchanges, and auxiliary lanes outside the region could result in delayed emergency vehicle response times or otherwise disrupt delivery of emergency response services. For example, closing off one or more lanes of a roadway would result in impaired emergency routes. The closure of these lanes could potentially cause traffic delays and ultimately prevent access to calls for service. Construction and operation of the transportation projects, and related development projects outside the SCAG region, would have the potential to conflict with emergency access plans, constituting a significant cumulative impact requiring the consideration of mitigation measures.

IMPACT TRA-6: Potential to result in conflict with adopted policies, plans, or programs regarding public transit, bicycle, or pedestrian facilities, or otherwise decrease the performance or safety of such facilities.

No Cumulative Impact

The Plan, when considered with other projects and RTPs, would not conflict with adopted policies, and plans, regarding public transit, bicycle, or pedestrian facilities, and therefore would not contribute to cumulative impacts in the SCAG region or surrounding areas.

3.17.6 MITIGATION MEASURES

The transportation projects included in the 2016 RTP/SCS would result in significant impacts to transportation and traffic. Mitigation measures are presented in two categories: SCAG mitigation and project-level mitigation measures. SCAG mitigation measures shall be implemented by SCAG over the lifetime of the 2016 RTP/SCS. Project-level mitigation measures can and should be implemented by Lead Agencies for transportation and development projects, as applicable and feasible.

IMPACT TRA-1: Potential to conflict with the established measures of effectiveness for the performance of the circulation system, by increasing the daily VMT, taking into account all modes of transportation including mass transit and non-motorized travel and relevant components of the circulation system, including but not limited to intersections, streets, highways and freeways, pedestrian and bicycle paths, and mass transit.

SCAG Mitigation Measures

MM-TRA-1(a)(1): SCAG shall facilitate minimizing VMT and related vehicular delay by minimizing impacts to circulation and access, improve mobility, and encourage transit and Active Transportation by conducting and participating in workshops (i.e., Mobility 21 workshop and Regional Transportation Workgroups) and web-based planning tools for local governments, forums with policy makers, and County Transportation Planning Agencies, member cities, and state partners during consultation on development and implementation of the Plan.

MM-TRA-1(a)(2): SCAG shall establish transportation infrastructure practices that identify and prioritize the design, retrofit, hardening, and stabilization of critical transportation infrastructure to prevent failure, to minimize loss of life and property, injuries, and avoid long term economic disruption.

MM-TRA-1(a)(3): SCAG shall identify further reduction in VMT, and fuel consumption that could be obtained through land-use strategies, additional car-sharing programs with linkage to public transportation, additional vanpools, additional bicycle sharing and parking programs, and implementation of a universal employee transit access pass (TAP) program.

MM-TRA-1(a)(4) SCAG shall help ensure the rapid repair of transportation infrastructure in the event of an emergency. This will be accomplished by SCAG, in cooperation with local and State agencies, identifying critical infrastructure needs necessary for: a) emergency responders to enter the region, b) evacuation of affected facilities, and c) restoration of utilities. In addition, SCAG shall establish transportation infrastructure practices that promote and enhance security.

MM-TRA-1(a)(5): SCAG shall provide the means for collaboration in planning, communication, and information sharing before, during, or after a regional emergency. This will be accomplished by the following:

- SCAG shall develop and incorporate strategies and actions pertaining to response and prevention of security incidents and events as part of the on-going regional planning activities.
- SCAG shall offer a regional repository of GIS data for use by local agencies in emergency planning, and response, in a standardized format.
- SCAG shall enter into mutual aid agreements with other MPOs (as feasible) to provide this data, in coordination with the California OES in the event that an event disrupts SCAG's ability to function.

MM-TRA-1(a)(6): SCAG shall continue to analyze and develop potential implementation strategies for a regional, market-based system to price or charge for auto trips during peak hours.

MM-TRA-1(a)(7): SCAG shall develop a vanpool program for employees for commute trips

MM-TRA-1(a)(8): SCAG shall encourage new developments to incorporate both local and regional transit measures into the project design that promote the use of alternative modes of transportation.

Project-Level Mitigation Measures

MM-TRA-1(b): Consistent with the provisions of Section 15091 of the State CEQA Guidelines, SCAG has identified mitigation measures capable of avoiding or reducing the potential for conflicts with the established measures of effectiveness for the performance of the circulation system that are within the jurisdiction and responsibility of Lead Agencies. Where the Lead Agency has identified that a project has the potential for significant effects, the Lead Agency can and should consider mitigation measures to ensure compliance with the adopted Congestion Management Plan, and other adopted local plans and policies, as applicable and feasible. Compliance can be achieved through adopting transportation mitigation measures as set forth below, or through other comparable measures identified by the Lead Agency:

- Institute teleconferencing, telecommute and/or flexible work hour programs to reduce unnecessary employee transportation.
- Create a ride-sharing program by designating a certain percentage of parking spaces for ride sharing vehicles, designating adequate passenger loading and unloading for ride sharing vehicles, and providing a web site or message board for coordinating rides.
- Provide a vanpool for employees.
- Fund capital improvement projects to accommodate future traffic demand in the area.
- Provide a Transportation Demand Management (TDM) plan containing strategies to reduce on-site parking demand and single occupancy vehicle travel. The TDM shall include strategies to increase bicycle, pedestrian, transit, and carpools/vanpool use, including:
 - Inclusion of additional bicycle parking, shower, and locker facilities that exceed the requirement
 - Construction of bike lanes per the prevailing Bicycle Master Plan (or other similar document)
 - Signage and striping onsite to encourage bike safety
 - Installation of pedestrian safety elements (such as cross walk striping, curb ramps, countdown signals, bulb outs, etc.) to encourage convenient crossing at arterials
 - Installation of amenities such as lighting, street trees, trash and any applicable streetscape plan.
 - Direct transit sales or subsidized transit passes
 - Guaranteed ride home program
 - Pre-tax commuter benefits (checks)
 - On-site car-sharing program (such as City Car Share, Zip Car, etc.)
 - On-site carpooling program
 - Distribution of information concerning alternative transportation options
 - Parking spaces sold/leased separately
Parking management strategies; including attendant/valet parking and shared parking spaces.

- Promote ride sharing programs e.g., by designating a certain percentage of parking spaces for high-occupancy vehicles, providing larger parking spaces to accommodate vans used for ride-sharing, and designating adequate passenger loading and unloading and waiting areas.
- Encourage bicycling to transit facilities by providing additional bicycle parking, locker facilities, and bike lane access to transit facilities when feasible.
- Encourage the use of public transit systems by enhancing safety and cleanliness on vehicles and in and around stations, providing shuttle service to public transit, offering public transit incentives and providing public education and publicity about public transportation services.
- Encourage bicycling and walking by incorporating bicycle lanes into street systems in regional transportation plans, new subdivisions, and large developments, creating bicycle lanes and walking paths directed to the location of schools and other logical points of destination and provide adequate bicycle parking, and encouraging commercial projects to include facilities on-site to encourage employees to bicycle or walk to work.
- Build or fund a major transit stop within or near transit development.
- Work with the school districts to improve pedestrian and bike access to schools and to restore or expand school bus service using lower-emitting vehicles.
- Provide information on alternative transportation options for consumers, residents, tenants and employees to reduce transportation-related emissions.
- Educate consumers, residents, tenants and the public about options for reducing motor vehicle-related greenhouse gas emissions. Include information on trip reduction; trip linking; vehicle performance and efficiency (e.g., keeping tires inflated); and low or zero-emission vehicles.
- Purchase, or create incentives for purchasing, low or zero-emission vehicles.
- Create local “light vehicle” networks, such as neighborhood electric vehicle systems.
- Enforce and follow limits idling time for commercial vehicles, including delivery and construction vehicles.
- Provide the necessary facilities and infrastructure to encourage the use of low or zero-emission vehicles.
- Reduce VMT-related emissions by encouraging the use of public transit through adoption of new development standards that would require improvements to the transit system and infrastructure, increase safety and accessibility, and provide other incentives.

- Project Selection:
 - Give priority to transportation projects that would contribute to a reduction in vehicle miles traveled per capita, while maintaining economic vitality and sustainability.
 - Separate sidewalks whenever possible, on both sides of all new street improvement projects, except where there are severe topographic or natural resource constraints.

- Public Involvement:
 - Carry out a comprehensive public involvement and input process that provides information about transportation issues, projects, and processes to community members and other stakeholders, especially to those traditionally underserved by transportation services.

- Transit and Multimodal Impact Fees:
 - Assess transit and multimodal impact fees on new developments to fund public transportation infrastructure, bicycle infrastructure, pedestrian infrastructure and other multimodal accommodations.
 - Implement traffic and roadway management strategies to improve mobility and efficiency, and reduce associated emissions.
- System Monitoring:
 - Monitor traffic and congestion to determine when and where new transportation facilities are needed in order to increase access and efficiency.
- Arterial Traffic Management:
 - Modify arterial roadways to allow more efficient bus operation, including bus lanes and signal priority/preemption where necessary.
- Signal Synchronization:
 - Expand signal timing programs where emissions reduction benefits can be demonstrated, including maintenance of the synchronization system, and will coordinate with adjoining jurisdictions as needed to optimize transit operation while maintaining a free flow of traffic.
- HOV Lanes:
 - Encourage the construction of high-occupancy vehicle (HOV) lanes or similar mechanisms whenever necessary to relieve congestion and reduce emissions.
- Delivery Schedules:
 - Establish ordinances or land use permit conditions limiting the hours when deliveries can be made to off-peak hours in high traffic areas.
 - Implement and supporting trip reduction programs.
 - Support bicycle use as a mode of transportation by enhancing infrastructure to accommodate bicycles and riders, and providing incentives.
- Establish standards for new development and redevelopment projects to support bicycle use, including amending the Development Code to include standards for safe pedestrian and bicyclist accommodations, and require new development and redevelopment projects to include bicycle facilities, as appropriate with the new land use are as follows:
- Bicycle and Pedestrian Trails:
 - Establish a network of multi-use trails to facilitate safe and direct off-street bicycle and pedestrian travel, and will provide bike racks along these trails at secure, lighted locations.

- Bicycle Safety Program:
 - Develop and implement a bicycle safety educational program to teach drivers and riders the laws, riding protocols, routes, safety tips, and emergency maneuvers.
- Bicycle and Pedestrian Project Funding: Pursue and provide enhanced funding for bicycle and pedestrian facilities and access projects.
- Bicycle Parking:
 - Adopt bicycle parking standards that ensure bicycle parking sufficient to accommodate 5 to 10 percent of projected use at all public and commercial facilities, and at a rate of at least one per residential unit in multiple-family developments (suggestion: check language with League of American Bicyclists).
- Adopt a comprehensive parking policy to discourage private vehicle use and encourage the use of alternative transportation by incorporating the following:
 - Reduce the available parking spaces for private vehicles while increasing parking spaces for shared vehicles, bicycles, and other alternative modes of transportation;
 - Eliminate or reduce minimum parking requirements for new buildings;
 - “Unbundle” parking (require that parking is paid for separately and is not included in the base rent for residential and commercial space);
 - Use parking pricing to discourage private vehicle use, especially at peak times;
 - Create parking benefit districts, which invest meter revenues in pedestrian infrastructure and other public amenities;
 - Establish performance pricing of street parking, so that it is expensive enough to promote frequent turnover and keep 15 percent of spaces empty at all times;
 - Encourage shared parking programs in mixed-use and transit-oriented development areas.
- Establish policies and programs to reduce onsite parking demand and promote ride-sharing and public transit at large events, including:
 - Promote the use of peripheral parking by increasing on-site parking rates and offering reduced rates for peripheral parking;
 - Encourage special event center operators to advertise and offer discounted transit passes with event tickets;
 - Encourage special event center operators to advertise and offer discount parking incentives to carpooling patrons, with four or more persons per vehicle for on-site parking;
 - Promote the use of bicycles by providing space for the operation of valet bicycle parking service.
- Parking “Cash-out” Program:
 - Require new office developments with more than 50 employees to offer a Parking “Cash-out” Program to discourage private vehicle use.

- Pedestrian and Bicycle Promotion:
 - Work with local community groups and downtown business associations to organize and publicize walking tours and bicycle events, and to encourage pedestrian and bicycle modes of transportation.
- Fleet Replacement:
 - Establish a replacement policy and schedule to replace fleet vehicles and equipment with the most fuel efficient vehicles practical, including gasoline hybrid and alternative fuel or electric models.

IMPACT TRA-2: Potential to conflict with an applicable congestion management program, including, but not limited to, VMT and travel demand measures, or other standards established by the County congestion management agency for designated roads or highways.

SCAG Mitigation Measures

See MM-TRA-1(a) through TRA-1(a)(8).

MM-TRA-2(a)(1): SCAG shall facilitate minimizing impacts related to traffic congestion by complying with County Congestion Management Plans and via ongoing regional planning efforts, workshops, and web-based planning tools with County Congestion Management Agencies, member agencies, and state partners during consultation on development and maintenance of the Plan. Congestion relief efforts shall be in accordance with the approach outlined in the SCAG Congestion Management Appendix of the 2016 RTP/SCS.

MM-TRA-2(a)(2): SCAG shall facilitate the remote use of ITS technologies that enhance transportation security, improve surveillance, monitor and distress notification systems and to assist in the rapid evacuation of disaster areas. SCAG shall facilitate minimizing impacts related to traffic congestion by facilitating regional efforts and coordinate discussion and collaboration among public agencies related to Intelligent Transportation Systems, as described in the **Transportation Security and Safety Appendix of the 2016 RTP/SCS.**

Project-Level Mitigation

MM-TRA--2(b). Consistent with the provisions of Section 15091 of the State CEQA Guidelines, SCAG has identified mitigation measures, capable of avoiding conflict with an applicable congestion management program that are within the jurisdictions of the lead agencies, including, but not limited to, VMT, VHD and travel demand measures, or other standards established by the County congestion management agency for designated roads or highways. Where the Lead Agency has identified that a project has the potential for significant effects, the Lead Agency can and should consider mitigation measures to ensure compliance with the adopted Congestion Management Plan, and other adopted local plans and policies,

as applicable and feasible. Compliance can be achieved through adopting transportation mitigation measures as set forth below, or through other comparable measures identified by the Lead Agency:

- Encourage a comprehensive parking policy that prioritizes system management, increase rideshare, and telecommute opportunities, including investment in non-motorized transportation and discouragement against private vehicle use, and encouragement to maximize the use of alternative transportation:
 - Advocate for a regional, market-based system to price or charge for auto trips during peak hours.
 - Ensure that new developments incorporate both local and regional transit measures into the project design that promote the use of alternative modes of transportation.
 - Coordinate controlled intersections so that traffic passes more efficiently through congested areas. Where traffic signals or streetlights are installed, require the use of Light Emitting Diode (LED) technology.
 - Encourage the use of car-sharing programs such as ZipCar. Accommodations for such programs include providing parking spaces for the car-share vehicles at convenient locations accessible by public transportation.
 - Reduce VHDs, especially daily heavy-duty truck vehicle hours of delay, through goods movement capacity enhancements, system management, increasing rideshare and work-at-home opportunities to reduce demand on the transportation system, investments in non-motorized transportation, maximizing the benefits of the land use-transportation connection and key transportation investments targeted to reduce heavy-duty truck delay.
- Determine traffic management strategies to reduce, to the maximum extent feasible, traffic congestion and the effects of parking demand by construction workers during construction of this project and other nearby projects that could be simultaneously under construction. Develop a construction management plan that include at least the following items and requirements:
 - A set of comprehensive traffic control measures, including scheduling of major truck trips and deliveries to avoid peak traffic hours, detour signs if required, lane closure procedures, signs, cones for drivers, and designated construction access routes.
 - Notification procedures for adjacent property owners and public safety personnel regarding when major deliveries, detours, and lane closures will occur.
 - Location of construction staging areas for materials, equipment, and vehicles at an approved location.
 - A process for responding to, and tracking, complaints pertaining to construction activity, including identification of an onsite complaint manager. The manager shall determine the cause of the complaints and shall take prompt action to correct the problem. The Lead Agency shall be informed who the Manager is prior to the issuance of the first permit.
 - Provision for accommodation of pedestrian flow.
 - As necessary, provision for parking management and spaces for all construction workers to ensure that construction workers do not park in on street spaces.
 - Any damage to the street caused by heavy equipment, or as a result of this construction, shall be repaired, at the project sponsor's expense, within one week of the occurrence of the damage (or excessive wear), unless further damage/excessive wear may continue; in such case, repair shall occur prior to issuance of a final inspection of the building permit. All

- damage that is a threat to public health or safety shall be repaired immediately. The street shall be restored to its condition prior to the new construction as established by the Lead Agency (or other appropriate government agency) and/or photo documentation, at the sponsor's expense, before the issuance of a Certificate of Occupancy.
- Any heavy equipment brought to the construction site shall be transported by truck, where feasible.
 - No materials or equipment shall be stored on the traveled roadway at any time.
 - Prior to construction, a portable toilet facility and a debris box shall be installed on the site, and properly maintained through project completion.
 - All equipment shall be equipped with mufflers.
 - Prior to the end of each work-day during construction, the contractor or contractors shall pick up and properly dispose of all litter resulting from or related to the project, whether located on the property, within the public rights-of-way, or properties of adjacent or nearby neighbors.
 - Promote “least polluting” ways to connect people and goods to their destinations.
- Create an interconnected transportation system that allows a shift in travel from private passenger vehicles to alternative modes, including public transit, ride sharing, car sharing, bicycling and walking, by incorporating the following:
 - Ensure transportation centers are multi-modal to allow transportation modes to intersect;
 - Provide adequate and affordable public transportation choices, including expanded bus routes and service, as well as other transit choices such as shuttles, light rail, and rail;
 - To the extent feasible, extend service and hours of operation to underserved arterials and population centers or destinations such as colleges;
 - Focus transit resources on high-volume corridors and high-boarding destinations such as colleges, employment centers and regional destinations;
 - Coordinate schedules and routes across service lines with neighboring transit authorities;
 - Support programs to provide “station cars” for short trips to and from transit nodes (e.g., neighborhood electric vehicles);
 - Study the feasibility of providing free transit to areas with residential densities of 15 dwelling units per acre or more, including options such as removing service from less dense, underutilized areas to do so;
 - Employ transit-preferential measures, such as signal priority and bypass lanes. Where compatible with adjacent land use designations, right-of-way acquisition or parking removal may occur to accommodate transit-preferential measures or improve access to transit. The use of access management shall be considered where needed to reduce conflicts between transit vehicles and other vehicles;
 - Provide safe and convenient access for pedestrians and bicyclists to, across, and along major transit priority streets;
 - Use park-and-ride facilities to access transit stations only at ends of regional transit ways or where adequate feeder bus service is not feasible.
 - Upgrade and maintain transit system infrastructure to enhance public use, including:
 - Ensure transit stops and bus lanes are safe, convenient, clean and efficient;
 - Ensure transit stops have clearly marked street-level designation, and are accessible;
 - Ensure transit stops are safe, sheltered, benches are clean, and lighting is adequate;

- Place transit stations along transit corridors within mixed-use or transit-oriented development areas at intervals of three to four blocks, or no less than one-half mile.
- Enhance customer service and system ease-of-use, including:
 - Develop a Regional Pass system to reduce the number of different passes and tickets required of system users;
 - Implement “Smart Bus” technology, using GPS and electronic displays at transit stops to provide customers with “real-time” arrival and departure time information (and to allow the system operator to respond more quickly and effectively to disruptions in service);
 - Investigate the feasibility of an on-line trip-planning program.
- Prioritize transportation funding to support a shift from private passenger vehicles to transit and other modes of transportation, including:
 - Give funding preference to improvements in public transit over other new infrastructure for private automobile traffic;
 - Before funding transportation improvements that increase roadway capacity and VMT, evaluate the feasibility and effectiveness of funding projects that support alternative modes of transportation and reduce VMT, including transit, and bicycle and pedestrian access.
- Promote ride sharing programs, including:
 - Designate a certain percentage of parking spaces for ride-sharing vehicles;
 - Designate adequate passenger loading, unloading, and waiting areas for ride-sharing vehicles;
 - Provide a web site or message board for coordinating shared rides;
 - Encourage private, for-profit community car-sharing, including parking spaces for car share vehicles at convenient locations accessible by public transit;
 - Hire or designate a rideshare coordinator to develop and implement ridesharing programs.
- Support voluntary, employer-based trip reduction programs, including:
 - Provide assistance to regional and local ridesharing organizations;
 - Advocate for legislation to maintain and expand incentives for employer ridesharing programs;
 - Require the development of Transportation Management Associations for large employers and commercial/ industrial complexes;
 - Provide public recognition of effective programs through awards, top ten lists, and other mechanisms.
- Implement a “guaranteed ride home” program for those who commute by public transit, ride-sharing, or other modes of transportation, and encourage employers to subscribe to or support the program.
- Encourage and utilize shuttles to serve neighborhoods, employment centers and major destinations.

- Create a free or low-cost local area shuttle system that includes a fixed route to popular tourist destinations or shopping and business centers.
- Work with existing shuttle service providers to coordinate their services.
- Facilitate employment opportunities that minimize the need for private vehicle trips, including:
 - Amend zoning ordinances and the Development Code to include live/work sites and satellite work centers in appropriate locations;
 - Encourage telecommuting options with new and existing employers, through project review and incentives, as appropriate.
- Enforce State idling laws for commercial vehicles, including delivery and construction vehicles.
- Organize events and workshops to promote GHG-reducing activities.
- Implement a Parking Management Program to discourage private vehicle use, including:
 - Encouraging carpools and vanpools with preferential parking and a reduced parking fee;
 - Institute a parking cash-out program;
 - Renegotiate employee contracts, where possible, to eliminate parking subsidies;
 - Install on-street parking meters with fee structures designed to discourage private vehicle use;
 - Establish a parking fee for all single-occupant vehicles.

IMPACT TRA-5: Potential to result in inadequate emergency access

SCAG Mitigation Measures

MM-TRA-5(a): SCAG shall facilitate minimizing impacts to emergency access through ongoing regional planning efforts to improve emergency access through design refinements, safety and security improvements, and collaborative planning with local, regional, and state partners such as Department of Transportation, Congestion Management Agencies, Fire Department, and other local enforcement agencies to minimize, reduce, and avoid impacts to regional transportation facilities and comply with the county and cities regional plan during development of the Regional Transportation Plan.

Project-Level Mitigation Measures

MM-TRA-5(b): Consistent with the provisions of Section 15091 of the State CEQA Guidelines, SCAG has identified mitigation measures capable of avoiding or reducing impacts to emergency access that are in the jurisdiction and responsibility of fire departments, local enforcement agencies, and/or Lead Agencies. Where the Lead Agency has identified that a project has the potential for significant effects, the Lead Agency can and should consider improving emergency access and ensuring compliance with the provisions of the county and city general plan, Emergency Evacuation Plan, and other regional and local plans establishing access during emergencies, as applicable and feasible. Compliance can be achieved through adopting transportation mitigation measures as set forth below, or through other comparable measures identified by the Lead Agency:

- Prior to construction, project implementation agencies can and should ensure that all necessary local and state road and railroad encroachment permits are obtained. The project implementation agency can and should also comply with all applicable conditions of approval. As deemed necessary by the governing jurisdiction, the road encroachment permits may require the contractor to prepare a traffic control plan in accordance with professional engineering standards prior to construction. Traffic control plans can and should include the following requirements:
 - Identification of all roadway locations where special construction techniques (e.g., directional drilling or night construction) would be used to minimize impacts to traffic flow.
 - Development of circulation and detour plans to minimize impacts to local street circulation. This may include the use of signing and flagging to guide vehicles through and/or around the construction zone.
 - Scheduling of truck trips outside of peak morning and evening commute hours.
 - Limiting of lane closures during peak hours to the extent possible.
 - Usage of haul routes minimizing truck traffic on local roadways to the extent possible.
 - Inclusion of detours for bicycles and pedestrians in all areas potentially affected by project construction.
 - Installation of traffic control devices as specified in the California Department of Transportation Manual of Traffic Controls for Construction and Maintenance Work Zones.
 - Development and implementation of access plans for highly sensitive land uses such as police and fire stations, transit stations, hospitals, and schools. The access plans would be developed with the facility owner or administrator. To minimize disruption of emergency vehicle access, affected jurisdictions can and should be asked to identify detours for emergency vehicles, which will then be posted by the contractor. Notify in advance the facility owner or operator of the timing, location, and duration of construction activities and the locations of detours and lane closures.
 - Storage of construction materials only in designated areas.
 - Coordination with local transit agencies for temporary relocation of routes or bus stops in work zones, as necessary.
- Ensure the rapid repair of transportation infrastructure in the event of an emergency through cooperation among public agencies and by identifying critical infrastructure needs necessary for: a) emergency responders to enter the region, b) evacuation of affected facilities, and c) restoration of utilities.
- Enhance emergency preparedness awareness among public agencies and with the public at large.
- Provision for collaboration in planning, communication, and information sharing before, during, or after a regional emergency through the following:
 - Incorporate strategies and actions pertaining to response and prevention of security incidents and events as part of the on-going regional planning activities.
 - Provide a regional repository of GIS data for use by local agencies in emergency planning, and response, in a standardized format.
 - Enter into mutual aid agreements with other local jurisdictions, in coordination with the California OES, in the event that an event disrupts the jurisdiction's ability to function.

3.17.7 LEVEL OF SIGNIFICANCE AFTER MITIGATION

IMPACT TRA-1: Potential to conflict with the established measures of effectiveness for the performance of the circulation system, by increasing the daily VMT, taking into account all modes of transportation including mass transit and non-motorized travel and relevant components of the circulation system, including but not limited to intersections, streets, highways and freeways, pedestrian and bicycle paths, and mass transit.

Implementation of Mitigation Measures MM-TRA-1(a)(1) through MM-TRA-1(a)(8) and MM-TRA-1(b) would reduce impacts to VMT. However, 2040 VMT would still be substantially greater than existing VMT. Therefore, the Plan would result in a significant and unavoidable impact related to VMT.

Impacts related to VHD were determined to be less than significant without mitigation because vehicle hours in delay would improve under the Plan.

Implementation of Mitigation Measures MM-TRA-1(a)(1) through MM-TRA-1(a)(8) and MM-TRA-1(b) would reduce VHD for heavy trucks. However, the 2040 heavy-duty truck VHD would still be substantially greater than the existing VHD. Therefore, the Plan would result in a significant and unavoidable impact related to heavy-duty truck VHD.

Impacts related to worker commute were determined to be less than significant without mitigation as the percentage of trips occurring within 45 minutes would increase under the Plan compared to today.

Impacts related transportation system fatality rates were determined to be less than significant without mitigation because fatality rates are anticipated to decrease.

Direct, indirect, and cumulative impacts related to transportation system injury rates were determined to be less than significant without mitigation because injury rates are anticipated to decrease.

IMPACT TRA-2: Potential to conflict with an applicable congestion management program, including, but not limited to, VMT and travel demand measures, or other standards established by the County congestion management agency for designated roads or highways.

Implementation of Mitigation Measures MM-TRA-1(a)(1) through MM-TRA-1(a)(8), MM-TRA-2(a), and MM-TRA-2(b) would reduce potential impacts related to conflict with an applicable congestion management program. However, due to the substantial growth and large number of projects anticipated in the Plan, direct, indirect, and cumulative impacts would remain significant and unavoidable.

IMPACT TRA-5: Potential to result in inadequate emergency access.

Implementation of Mitigation Measures MM-TRA-5(a) and MM-TRA-5(b) would reduce potential impacts related to inadequate emergency access. However, due to the substantial growth and large number of projects anticipated in the Plan, direct, indirect, and cumulative impacts would remain significant and unavoidable.

UTILITIES AND SERVICE SYSTEMS

This section of the Program Environmental Impact Report (PEIR) describes utilities and service systems in the Southern California Association of Governments (SCAG) region, discusses the potential impacts of the proposed 2016 Regional Transportation Plan/Sustainable Communities Strategies (“2016 RTP/SCS,” “Plan” or “Project”) in relation to construction of new utility infrastructure or expansion of existing infrastructure, identifies mitigation measures for the impacts, and evaluates the residual impacts. The potential for the 2016 RTP/SCS to exceed the capacity of existing utility infrastructure or create the demand for new infrastructure was evaluated in accordance with Appendix G of the 2015 State California Environmental Quality Act (CEQA) Guidelines. Consistent with the State CEQA Guidelines, the scope of the analysis of utilities and service systems addressed in this PEIR includes water supply, wastewater treatment, storm drains, and landfills. The potential to adversely affect utility capacity or infrastructure in the SCAG region was evaluated at the programmatic level of detail, in relation to the General Plans of the six counties and 191 cities within the SCAG region; a query of government data bases; a review of related literature germane to the SCAG region; as well as a review of the 2012 SCAG RTP/SCS PEIR. Section 3.6, *Energy*, addresses energy implications of the 2016 RTP/SCS, including a discussion of the potential energy impacts of the proposed policies, programs, and projects included in the 2016 RTP/SCS, with particular emphasis on avoiding or reducing inefficient, wasteful and unnecessary consumption of energy, identifies mitigation measures for the impacts, and evaluates the residual impacts.

Water supply in the SCAG region is a function of water supply from imported sources, local water supplies, groundwater and recycling. According to the Association of California Water Agencies (ACWA), “California is home to one of the most extensive water supply systems in the nation. Comprising more than 1,000 reservoirs, hundreds of groundwater basins and dozens of local and regional water conveyance systems, California’s water infrastructure is an engineering marvel and a tribute to human ingenuity.”¹ California relies on an elaborate network of water storage and delivery systems to supply cities, farms, businesses and the environment with adequate water year-round. ACWA estimates that California receives about 200 million acre-feet of precipitation in average years. Of this total, 65 percent is lost through evaporation and the remaining 35 percent stays in the state’s system as runoff. More than 30 percent of this runoff flows out to the Pacific Ocean or other salt sinks. The rest is used by agricultural, urban, and environmental purposes. While an estimated 75 percent of the annual precipitation falls north of Sacramento, more than 75 percent of the demand for water is south of the capital city. Five of the seven major systems of aqueducts and associated infrastructure that exist today in California convey water supplies to the SCAG region.²

In addition to creating a huge demand for water supply, the SCAG population of close to 19 million generate demand for wastewater treatment, stormwater drainage, and solid waste disposal. The quality of the environment in the SCAG region has changed over time. In particular, changes in the waste discharge requirements have affected the quality and healthfulness of air, water, and soil resources that are essential to well-being of human and the other organisms that depend on aquatic

¹ Association of California Water Agencies. Accessed 11 September 2015. *California’s Water: California Water Systems*. Available at: <http://www.acwa.com/content/california-water-series/californias-water-california-water-systems>

habitat. These changes resulted in new requirement of new water or wastewater treatment facilities and expansion of existing facilities. Prior to the 1960s there was limited regulation of solid waste and groundwater quality and the disposal of waste materials from these industries, as well as the general public. This lack of regulation allowed the concentration of natural and anthropogenic compounds to persist in soil, water, and air, at unhealthful levels. Numerous regulations were enacted in the late 1960s and early 1970s in an effort to manage water quality and waste discharge. Subject to the regulatory oversight of Region 9 of the U.S. Environmental Protection Agency (U.S. EPA), municipalities take the lead in handling sanitary wastewater and stormwater runoff. Properly managed municipal facilities, such as publicly owned treatment works (POTWs), and wastewater systems, such as separate and combined storm sewer systems, play an important role in protecting community health and local water quality. Safe disposal of waste is a critical part of protecting the environment. U.S. EPA Region 9 works with the California EPA (Cal/EPA) and local governments to permit and monitor waste disposal facilities in southern California. In addition to the safe operation of landfills, their efforts involve helping generators to reduce their waste by updating operations and recycling as much as possible. Reducing waste saves energy and prevents future environmental impacts. In some cases, facilities are even able to achieve zero waste (exit) generation.

Definitions

Definitions of terms used in the regulatory framework, characterization of baseline conditions, and impact analysis for utilities and service systems are provided.

Nonhazardous Municipal Solid Waste: More commonly known as trash or garbage—consists of everyday items that are used and then thrown away, such as product packaging, grass clippings, furniture, clothing, bottles, food scraps, newspapers, appliances, paint, and batteries. This comes from homes, schools, hospitals, and businesses.

Regional Water Quality Control Board (RWQCB): There are nine RWQCBs in California. The RWQCBs protect ground and surface water quality, and are responsible for implementing Water Quality Control Plans.

Sanitary Landfill: Sanitary landfills are sites where waste is isolated from the environment until it is safe. It is considered when it has completely degraded biologically, chemically and physically.

Septic Tank: An underground vessel for treating wastewater from a single dwelling or building by a combination of settling and anaerobic digestion. Effluent is usually disposed of through a dispersal system which consists of one or a combination of leach fields, seepage pits, and/or subsurface drip dispersal system. Settled solids in septic tank are pumped out periodically and hauled to a treatment facility for disposal.

Storm Water and Stormwater: In layman's terms, stormwater is defined as an abnormal amount of surface water due to a heavy rain or snowstorm. The term *storm water* is used when employed by the cited source of information. In all other instances, *stormwater* is used, consistent with the provision of Appendix G of the CEQA Guidelines and as defined by the U.S. EPA. Stormwater runoff is generated when precipitation from rain and snowmelt events flows over land or impervious surfaces and does not percolate into the ground. As the runoff flows over the land or impervious surfaces (paved streets,

parking lots, and building rooftops), it accumulates debris, chemicals, sediment, or other pollutants that could adversely affect water quality if the runoff is discharged untreated.

Tier 1 Onsite Wastewater Treatment System (OWTS): Low Risk New or Replacement OWTS (Policy Section 7 & 8) applies to new or replacement OWTS that comply with conservative siting and design standards describe in the OWTS Policy. Tier 1 applies when a Local Agency Management Program (LAMP) has not been approved by the Regional Water Board. Maximum flow rate is 3,500 gallons per day (gpd).

Tier 2 Onsite Wastewater Treatment System (OWTS): Local Agency Management Program (LAMP) for New or Replacement OWTS (OWTS Policy Section 9) applies to new or replacement OWTS that comply with the siting and design standards in an approved LAMP. LAMPs are developed by Local Agencies based on local conditions; siting and design standards may differ from Tier 1 standards. Maximum flow rate is 10,000 gpd.

Tier 3 Onsite Wastewater Treatment System: Advanced Protection Management Program (OWTS Policy Section 10). Applies to OWTS located near impaired surface water bodies that are subject to a Total Maximum Daily Load (TMDL) implementation plan, a special provision contained in a LAMP, or is located within 600 feet of a water body listed on OWTS Attachment 2. Supplemental treatment requirements may apply to a Tier 3 system. Maximum flow rate is 10,000 gpd.

Water Supply System: A water supply system is a system for the collection, transmission, treatment, storage and distribution of water from source to consumers, for example, homes, commercial establishments, industry, irrigation facilities and public agencies for water-related activities (firefighting, street flushing, and so forth).

Wastewater: The spent or used water of a community or industry that contains dissolved and suspended matter.

3.18.1 REGULATORY FRAMEWORK

Federal

Federal Clean Water Act, Sections 404 and 401

The Federal Clean Water Act of 1972 (CWA; 33 U.S. Code [USC] §1251) established the basic structure for regulating discharges of pollutants into the waters of the U.S. and regulating quality standards for surface waters.³ Under the CWA, the U.S. EPA has implemented pollution control programs such as setting wastewater standards for industries and surface waters. Section 404 of the CWA establishes a program to regulate the discharge of dredged and fill materials into waters of the United States, including wetlands. The U.S. Army Corps of Engineers (USACOE) administers the day-to-day program, including individual permit decisions and jurisdictional determinations; develops policy and guidance; and enforces Section 404 provisions. Section 401 of the CWA made it unlawful to discharge any

³ California Water Boards. Accessed 14 September 2015. Fact Sheet: *Water Quality Control Policy for Siting, Design, Operation and Maintenance of Onsite Wastewater Treatment Systems (OWTS Policy)*. Available at: http://www.waterboards.ca.gov/water_issues/programs/owts/index.shtml

pollutant from a point source into navigable waters, unless a permit was obtained. The U.S. EPA's National Pollutant Discharge Elimination System (NPDES) permit program controls discharges. Point sources are discrete conveyances, such as pipes or manmade ditches. Individual homes that are connected to a municipal system, use a septic system, or do not have a surface discharge do not need an NPDES permit; however, industrial, municipal, and other facilities must obtain permits if their discharges go directly to surface waters. The provisions of Section 401 of the CWA are enforced through the State Water Resources Control Board (SWRCB) and local RWQCBs.

Safe Drinking Water Act (SDWA)

The SDWA (Public Law 93-523) regulates the quality of Americans' drinking water. The law requires actions to protect drinking water and its sources—rivers, lakes, reservoirs, springs, and groundwater wells—and applies to public water systems serving 25 or more people. It authorizes the U.S. EPA to set national health-based standards for drinking water to protect against both naturally occurring and man-made contaminants. In addition, it oversees the states, municipalities and water suppliers that implement the standards.

U.S. EPA standards are developed as a Maximum Contaminant Level (MCL) for each chemical or microbe. The MCL is the concentration that is not anticipated to produce adverse health effects after a lifetime of exposure, based upon toxicity data and risk assessment principles. The U.S. EPA's goal in setting MCLs is to assure that even small violations for a period of time do not pose significant risk to the public's health over the long run. National Primary Drinking Water Regulations (NPDWRs, or primary standards) are legally enforceable standards that limit the levels of contaminants in drinking water supplied by public water systems.

Secondary standards are nonenforceable guidelines regulating contaminants that may cause cosmetic effects (such as skin or tooth discoloration) or aesthetic effects (such as taste, odor, or color) in drinking water. The U.S. EPA recommends secondary standards to water systems but does not require systems to comply. However, states may choose to adopt them as enforceable standards.

In July 2014, implementation of the SDWA was transferred from the California Department of Public Health (DPH) to State Water Resources Control Board, Division of Drinking Water (DDW). DDW also now oversees the operational permitting and regulatory oversight of public water systems. DDW requires public water systems to perform routine monitoring for regulated contaminants that may be present in their drinking water supply. To meet water quality standards and comply with regulations, a water system with a contaminant exceeding an MCL must notify the public and remove the source from service or initiate a process and schedule to install treatment for removing the contaminant. Health violations occur when the contaminant amount exceeds the MCL or when water is not treated properly. In California, compliance is usually determined at the wellhead or the surface water intake. Monitoring violations involve failure to conduct or to report in a timely fashion the results of required monitoring. In addition, DDW conducts water source assessments, oversees water recycling projects, permits water treatment devices, certifies water system employees, promotes water system security, and administers grants under the State Revolving Fund and State bonds for water system improvements.

Resource Conservation and Recovery Act

The Resource Conservation and Recovery Act (RCRA; Public Law 94–580) establishes minimum location standards for siting municipal solid waste landfills. Because California laws and regulations governing the approval of solid waste landfills meet the requirements of Subtitle D, the U.S. EPA delegated the enforcement responsibility to the State of California.

State

Public Utilities Act of 1912

The CPUC also has jurisdiction over the IOUs in California. The CPUC, which was originally called the Railroad Commission until 1946, was established under the Public Utilities Act of 1912 as a regulatory authority for railroads, marine transportation companies, natural gas, electric, telephone, and water companies.⁴ The mission of the CPUC is to serve the public interest by protecting consumers and ensuring the provision of safe, reliable utility service and infrastructure at reasonable rates, with a commitment to environmental enhancement and a healthy California economy. CPUC regulates utility services, stimulate innovation, and promote competitive markets, where possible, in the communications, energy,⁵ transportation, and water industries.⁵

Warren-Alquist Act of 1974

The CEC was established by the Warren-Alquist Act of 1974 (PRC Division 15). The California Energy Commission (CEC) and the California Public Utilities Commission (CPUC) have jurisdiction over the investor-owned utilities (IOUs) in California As the State’s primary energy policy and planning agency committed to reducing energy costs and environmental impacts for energy use—such as greenhouse gas emissions—while ensuring a safe, resilient, and reliable source of energy.⁶

California Integrated Waste Management Act

The California Integrated Waste Management Act of 1989 (Assembly Bill [AB] 939; Chapter 1095, Statute of 1989) was enacted to reduce, recycle, and reuse solid waste generated in the State to the maximum extent feasible. Specifically, the Act requires city and county jurisdictions to identify an implementation schedule to divert 50 percent of the total waste stream from landfill disposal by the year 2000. The Act also requires each city and county to promote source reduction, recycling, and safe disposal or transformation. Cities and counties are required to maintain the 50-percent diversion specified by AB 939 by the year 2000.

⁵ California Public Utilities Commission. Accessed 14 September 2015. *CPUC Mission*. Available at: <http://www.cpuc.ca.gov/PUC/aboutus/pucmission.htm>

⁶ California Energy Commission. January 2015. *The California Energy Commission: Core Responsibilities*. Available at: http://www.energy.ca.gov/commission/fact_sheets/documents/core/CEC-Core_Responsibilities.pdf

For the SCAG region, the Counties' Department of Public Works (Public Works) is responsible for preparing and administering the Summary Plan and the Countywide Siting Element (CSE). The Summary Plan, approved by CalRecycle on June 23, 1999, describes the steps to be taken by local agencies, acting independently and in concert, to achieve the mandated State diversion rate by integrating strategies aimed toward reducing, reusing, recycling, diverting, and marketing solid waste generated within the County. The CSE, approved by CalRecycle on June 24, 1998, identifies how, for a 15-year planning period, the County and the cities within it would meet their long-term disposal capacity needs to safely handle solid waste generated in the County that cannot be reduced, recycled, or composted.

California Solid Waste Reuse and Recycling Act

The California Solid Waste Reuse and Recycling Act of 1991 (PRC 42900-42901) was enacted to assist local jurisdictions with accomplishing the goals of AB 939. In accordance with AB 2176, any development project that has submitted an application for a building permit must include adequate, accessible areas for the collection and loading of recyclable materials. Furthermore, the areas to be utilized must be adequate in capacity, number, and distribution to serve the proposed project. Moreover, the collection areas are to be located as close to existing exterior refuse collection areas as possible.

SB X&-6, Groundwater

Passed into law in November, 2009, SB X7-6, Groundwater (Section 12924 of the Water Code) required statewide collection and publication of groundwater elevations for the first time in California's history. SB X7-6 directs local agencies, with the assistance of DWR, to monitor and report the elevation of their groundwater basins to help manage the resource better during both average water years and drought conditions. As of December 2, 2013, DWR received monitoring notifications for more than 395 basins and subbasins. DWR has designated 124 monitoring entities who are now monitoring and reporting groundwater elevations for 152 basins and subbasins.⁷

Solid Waste: Diversion Rule (AB 341)

Under commercial recycling law (Chapter 476, Statutes of 2011), Assembly Bill (AB) 341, directed the California Department of Resources Recycling and Recovery (CalRecycle) to develop and adopt regulations for mandatory commercial recycling. CalRecycle initiated formal rulemaking with a 45-day comment period beginning October 28, 2011. The final regulation was approved by the Office of Administrative Law on May 7, 2012. AB 341 declared a policy goal of the state that not less than 75 percent of solid waste generated be source reduced, recycled, or composted by the year 2020.

Executive Order B-29-15

Passed on January 17, 2014, Executive Order B-29-15 mandates the SWRCB to impose restrictions to achieve a statewide 25 percent reduction in potable urban water usage through February 28, 2016. Water reductions are measured as compared to 2013 levels. Areas with high per capita water usage

⁷ California Department of Water Resources. Accessed 15 September 2015. *California Water Today, Volume 1 – The Strategic Plan*. Available at:
http://www.waterplan.water.ca.gov/docs/cwpu2013/Final/04_Vol1_Ch03_Ca_Water_Today.pdf

should achieve proportionally greater reductions than those areas with lower per capita water usage. The EO additionally directs the California Department of Water Resources (DWR) to work with local agencies to collectively replace 50 million square feet of lawns and ornamental turf with drought tolerant landscapes.

California Water Action Plan

The California Water Action Plan—released by Governor Brown in January 2014—is a roadmap for the first five years, 2014 to 2019, of the state’s journey toward sustainable water management. The California Water Action Plan has been developed to meet three broad objectives: more reliable water supplies, the restoration of important species and habitat, and a more resilient, sustainably managed water resources system (water supply, water quality, flood protection, and environment) that can better withstand inevitable and unforeseen pressures in the coming decades.

California Water Plan

The California Water Plan, last updated in 2013, provides a collaborative planning framework for elected officials, agencies, tribes, water and resource managers, businesses, academia, stakeholders, and the public to develop findings and recommendations and make informed decisions for California's water future. The plan, updated every five years, presents the status and trends of California's water-dependent natural resources; water supplies; and agricultural, urban, and environmental water demands for a range of plausible future scenarios. The California Water Plan also evaluates different combinations of regional and statewide resource management strategies to reduce water demand, increase water supply, reduce flood risk, improve water quality, and enhance environmental and resource stewardship. The evaluations and assessments performed for the plan help identify effective actions and policies for meeting California's resource management objectives in the near term and for several decades to come.

State Water Resources Control Board Onsite Waste Treatment System (OWTS) Policy

The State Water Resources Control Board OWTS policy allows the continued use of OWTS, while protecting water quality and public health. This policy recognizes that responsible local agencies can provide the most effective means to manage OWTS on a routine basis. Therefore, as an important element, it is the intent of this policy to efficiently utilize, and improve upon where necessary, existing local programs through coordination between the State and local agencies. To accomplish this purpose, this policy establishes a statewide, risk-based, tiered approach for the regulation and management of OWTS installations and replacements and sets the level of performance and protection expected from OWTS. In particular, the policy requires actions for water bodies specifically identified as part this Policy where OWTS contribute to water quality degradation that adversely affect beneficial uses.

Regional

The water quality control plans and groundwater protection responsibilities for the SCAG region are described in Section 3.10, *Hydrology and Water Quality*.

Urban Water Management Plans

Under California Water Code Division 6, Part 2.6, Section 10610-10656, the Urban Water Management Planning Act (UWMPA) requires urban water suppliers that supply more than 3,000 acre-feet of water annually, or serve more than 3,000 connections, to submit an Urban Water Management Plan (UWMP). The UWMP is a public document prepared by water suppliers to support their long-term resource planning over a 20-year period and ensure adequate water supplies are available to meet existing and future water demands. The UWMP must be submitted to the DWR every 5 years, and must demonstrate progress toward reduction in 20 percent per capita urban water consumption by the year 2020, as required in the Water Conservation Bill of 2009, Senate Bill X7-7. There are 138 service districts in the SCAG region required to develop a UWMP, which is typically prepared and submitted to DWR within 30 days and reviewed 60 days prior to public hearing for plan adoption and implementation. The preparation of the plan includes guidebook, workshops, and programming for comprehensive strategies to conserve water.

Local

The County General Plans further discuss water quality regulations, including regulations of groundwater quality, for the SCAG region. These plans are available in Section 3.10, *Hydrology and Water Quality*. County and City General Plan also include goals and policies for recycling and diversion of solid waste to ensure compliance with the California Integrated Waste Management Act (AB 9393), the California Solid Waste Reuse and Recycling Act, and the Solid Waste Diversion Rule (AB 341).

3.18.2 EXISTING CONDITIONS

The utilities within the SCAG region include storm drain and sanitary sewer systems, water services, and solid waste and waste treatment facilities. This section provides a broad overview of the capacity of current water, wastewater, storm water and solid waste treatment, distribution, and disposal facilities.

Wastewater

Wastewater is defined as water that contains wastes from residential, commercial, and industrial processes. Municipal wastewater is comprised of sewage and gray water from sinks and showers. Industry, such as refineries, also generates wastewater that requires treatment to remove pollutants prior to discharge.

Wastewater Treatment Requirements

Created by the State Legislature in 1967, the SWRCB has jurisdiction throughout California, where it protects water quality by setting statewide policies. The SCAG region incorporates five of the nine Regional Water Boards in the State:

- Region 4—Los Angeles Regional Water Quality Control Board: Los Angeles, Ventura Counties, (small portions of Kern and Santa Barbara Counties).
- Region 6—Lahontan Regional Water Quality Control Board: San Bernardino, Los Angeles (N/E corner) counties.
- Region 7—Colorado River Regional Water Quality Control Board: Imperial, San Bernardino, Riverside, San Diego Counties.
- Region 8—Santa Ana Regional Water Quality Control Board: Orange, Riverside, San Bernardino Counties.
- Region 9—San Diego Regional Water Quality Control Board: San Diego, Imperial, Riverside Counties.

Wastewater Treatment Facilities

Treated wastewater is generally discharged into a water body, evaporation pond or percolation basin, or used for irrigation of farmland and landscaping. The U.S. EPA's NPDES permit program areas affect how a municipality handles its sanitary wastewater. Tertiary treatment, which involves the removal of nutrients and nearly all suspended organic matter from wastewater, is now commonly required for discharges to bodies of water, particularly where there is potential for human contact. Municipalities rely on assistance from other partners, such as industry, developers, and homeowners, to ensure that they can meet the requirements contained in their municipal NPDES permits.⁸ Properly managed municipal facilities, such as publicly owned treatment works (POTWs), and wastewater systems, such as separate and combined storm sewer systems, play an important role in protecting community health and local water quality.⁹

There are 66 major wastewater treatment facilities that serve the SCAG region (**Table 3.18.2-1, *Major Active Wastewater Treatment Facilities in the SCAG Region*; Figure 3.18.2-1, *Wastewater Treatment Plants***). Several smaller municipal wastewater systems and agencies also serve incorporated cities within the six-county region. Where municipal wastewater systems are absent, permits are available for private onsite sewage disposal systems. Most of the major wastewater treatment facilities are located in areas of higher population density. Many of the major facilities are located along the coastline to provide a close proximity of a water body for discharge of the treated water.

Storm Water Drainage Facilities

Each city and county within the SCAG region maintains a storm drain system. The systems vary by age, size, and type depending on the municipality, and may consist of day pipe, iron/steel pipe, very old brick collector sewers, and reinforced concrete pipe facilities.

California Water Board Districts 4, 6, 7, 8, and 9 manage their storm water drainage facilities independently in accordance with state and federal regulations. Each region employs the U.S. EPA's NPDES program permits for discharges from municipal storm sewers. Polluted storm water runoff is commonly transported through Municipal Separate Storm Sewer Systems (MS4s), from which the untreated substances are often discharged into local water bodies. To prevent harmful pollutants from being washed or dumped into an MS4, operators must obtain an NPDES permit and develop a storm water management program. All six counties in the SCAG region would go through the RWQCBs to obtain MS4 for dredge and fill from industrial and commercial facilities, construction sites, new development, municipal activities, and to provide public education on storm water pollution prevention.

The California State Water Board is currently in the midst of a planning process that is seeking to identify ways to expand the scope of the storm water program to better integrate watershed management, multiple benefit solutions, source control and improvement in regulatory program efficiency and effectiveness.¹⁰ On June 25, 2015, the draft of the *Storm Water Strategic Initiative: Proposal to Develop a Storm Water Program Workplan and Implementation Strategy – Including Projects for Immediate Action*, was released for public comment. The result of this planning process may reduce or reform the current methods of wastewater treatment. The initiative focuses on three main elements: (1) utilization of storm water as a resource, (2) removal of storm water pollutants by true source control, and (3) improvement of overall Water Board program efficiency and effectiveness.¹¹

Water Supply

Surface and groundwater within the SCAG region have proven insufficient to support the rapidly growing population in the region. Water imported from other areas now meets about 50 percent of fresh water demands in the region. Restrictions on imported water as well as drought conditions have necessitated water conservation measures which, at present, are voluntary. These conservation measures have slightly lessened the use of potable water in many areas of the region. In addition, the demand for water is being partially fulfilled by the increasing use of reclaimed water for non-potable purposes such as greenbelt irrigation and industrial processing and servicing.

There are 36 water treatment facilities that serve the SCAG region (**Table 3.18.2-2, *Active Water Treatment Facilities in the SCAG Region*; Figure 3.18.2-2, *Water Treatment Facilities***).

California’s water-related assets and services are provided by many interdependent systems that historically have been managed on a project-by-project basis. The gap between water supplies and water demand decreased substantially between 2001 and 2010 (Table 3.18.2-3, *California Statewide Water Balance between 2001 and 2010 [in Millions of Acre-Feet]*). This narrowing gap has been further exacerbated in the SCAG region by record low snowpack in the Sierra Nevada Mountains in 2013 and 2014 and severe drought condition.¹² There are typically three sources of supply water: (1) natural sources, (2) manmade sources, and (3) reclamation. Natural water sources include rivers, lakes, streams, and groundwater stored in aquifers. Manmade sources include runoff water that is treated and stored in reservoirs and other catchment structures. Reclaimed water is wastewater that has been conveyed to a treatment plant and then treated to a sufficient degree that it may again be used for certain uses (such as irrigation). However, reclaimed water is not potable (drinkable) and must be conveyed in a separate system in order to ensure there is no possibility of direct human consumption.

NOTE:

^a Consumptive use is the amount of applied water used and no longer available as a source of supply. Applied water is greater than consumptive use because it includes consumptive use, reuse, and outflows.

^b Change in Supply: Groundwater – The difference between water extracted from and water recharged into groundwater basins in a region. All regions and years were calculated using the following equation: change in supply: groundwater = intentional recharge + deep percolation of applied water + conveyance deep percolation and seepage - withdrawals. This does not include unknown factors such as natural recharge and subsurface inflow and outflow.

SOURCE:

California Department of Water Resources. Accessed 15 September 2015. *California Water Today, Volume 1 – The Strategic Plan*. Available at: http://www.waterplan.water.ca.gov/docs/cwpu2013/Final/04_Vol1_Ch03_Ca_Water_Today.pdf

Surface and groundwater resources are largely managed as separate resources, when they are, in fact, a highly interdependent system of watersheds and groundwater basins. Water quality, land use, and flood management are also integral to the effective management of these systems.¹³

Within the SCAG region, water supply comes from a variety of sources. While the Metropolitan Water District of Southern California (MWD) imports water from Colorado River and State Water Project and provides wholesale water supply to its coverage area, many cities and some county areas rely on groundwater, especially those along the coast. San Bernardino and Riverside Counties, for example, rely on a mixture of groundwater and surface water.

¹³ California Department of Water Resources. Accessed 15 September 2015. *California Water Today, Volume 1 – The Strategic Plan*. Available at: http://www.waterplan.water.ca.gov/docs/cwpu2013/Final/04_Vol1_Ch03_Ca_Water_Today.pdf

The eastern portion of Riverside County, the majority of which is desert, also relies on water from the Colorado River, northern California, and local groundwater. This portion of the county is largely undeveloped, with uncertain increases in the water resource available to meet increases in water demand being a major factor that might constrain future development. Riverside County's water supply is uncertain for two reasons: recent water apportionments from northern California have been reduced as part of the CALFED Bay-Delta Program, as well as decreased supplies to California from the Colorado River. Additionally, most of the county's sources of water are currently at capacity. Water storage to meet peak demand, or a two-day to one-day supply, is provided by many local water agencies within Riverside County. However, long-term storage of large quantities of water is provided only in the MWD and DWR facilities. Total storage capacity in the existing reservoir system is 871,000 acre-feet (af). Three of these storage facilities are located in Riverside County: Lake Mathews, Lake Skinner, and Lake Perris.

Together, these storage facilities have a total of 342,300 af of storage capacity. Diamond Valley Lake triples this capacity with an additional 800,000 af of storage, bringing the total storage capacity available within Riverside County to 1,142,300 af. Even though the creation of Diamond Valley Lake has allowed for three times the current storage of water, there is no increase in the total amount of water available to the county that can be identified. This increase in water storage will benefit the whole South Coast region, which includes other significant jurisdictional water users such as San Diego County, as well as Riverside County. Currently, approximately three-eighths of existing storage capacity may be used to meet seasonal demand. The remaining five-eighths is reserved for emergency need such as severe droughts and/or use when a natural disaster, such as an earthquake, makes it impossible to meet demand through usual supply facilities. Projected 2020 water use and population levels indicate an expected water shortage for the two hydrologic regions that comprise Riverside County: the South Coast and Colorado River regions. Though these regions include most of Southern California, and not just Riverside County, they are each representative of the types of supply and demand within the County. The two regions are defined as follows:

- **South Coast:** Basins draining into the Pacific Ocean from the southeastern boundary of Rincon Creek Basin in western Ventura County to the Mexican border.
- **Colorado River:** Basins south and east of the South Coast and South Lahontan regions; areas that drain into the Colorado River, the Salton Sea, and other closed basins north of the Mexican border.

Following are the descriptions of the two hydrologic regions as well as regional water budgets (Tables 3.18.2-4, *South Coast Region Water Budget with Existing Facilities and Programs* and 3.18.2-5, *Colorado River Region Water Budget with Existing Facilities and Programs*).

Water Supply and Use in the South Coast Hydrologic Region

The region has a diverse mix of both local and imported water supply sources. Local water sources include water recycling, groundwater storage and conjunctive use, conservation, brackish water desalination, water transfer and storage, and infrastructure enhancements. The region imports water through the State Water Project, the Colorado River Aqueduct, and the Los Angeles Aqueduct. These resources allow the region flexibility in managing supplies and resources in wet and dry years. The MWD wholesales the water to a consortium of 26 member agencies, including 14 cities, 11 municipal water districts, and one county authority that serve nearly 19 million people living in six counties stretching from Ventura to San Diego. MWD imported an average of 1 million af of water per year from

the SWP from 1995 to 2010, and just under 1 million af per year from the CRA during the same time period.

Water Supply and Use in the Colorado River Hydrologic Region

About 85 percent of the region's urban and agricultural water supply comes from surface water deliveries from the Colorado River. Water from the river is delivered to the region via the All American and Coachella canals, local diversions, and the Colorado River Aqueduct by means of an exchange for SWP water. The Colorado River is an interstate and international river whose use is apportioned among the seven Colorado River Basin states and Mexico by a complex body of statutes, decrees, and court decisions known collectively as the "Law of the River." Local surface water, groundwater, and the SWP provide the remainder of water to the region. In addition, many of the alluvial valleys in the regions are underlain by groundwater aquifers that are the sole source of water for many local communities. However, some alluvial valleys contain groundwater of such poor quality it is not suitable for potable uses.

Other cities such as Banning, Coachella, Indio, Palm Desert, Hesperia, and Victorville, are solely dependent on groundwater; while other cities in the SCAG region have supplemented their groundwater supplies with water from the State Water Projects or local streams and reservoirs.

Local Water Supply

Local sources of water account for approximately 30 percent of the total volume consumed annually in the SCAG region.¹⁴ Local sources include surface water runoff, groundwater, and water reclamation.

Local Surface Water (within Each HU Region)

The infiltration of surface runoff augments groundwater and surface water supplies. However, the regional water demand exceeds the current natural recharge of runoff water. The arid climate, summer drought, and increased impervious surface associated with urbanization contribute to this reduction in natural recharge. Urban and agricultural runoff often contains pollutants that decrease the quality of local water supplies. Runoff captured in storage reservoirs varies widely from year to year depending on the amount of local precipitation. On average, precipitation contributes approximately 38,000 acre-feet per year (afy) within the MWD service area (not including San Diego County).¹⁵ Within the desert regions, the amount is considerably less, owing to climatic differences.

¹⁴ California Department of Water Resources. Accessed 15 September 2015. *California Water Plan Update 2013*. Available at: <http://www.waterplan.water.ca.gov/cwpu2013/final/index.cfm>

¹⁵ California Department of Water Resources. Accessed 15 September 2015. *California Water Plan Update 2013*. Available at: <http://www.waterplan.water.ca.gov/cwpu2013/final/index.cfm>

Local Groundwater

Groundwater represents most of the SCAG region’s fresh water supply, making up approximately 34 percent of total water use, depending on precipitation levels.¹⁶ This proportion increases to roughly 40 percent in dry years (Figure 3.18.2-3, *CASGEM Final Basin Prioritization Results*). The hydrologic regions vary in their dependence on groundwater for urban and agricultural uses (Table 3.18.2-6, *Groundwater Dependence in the SCAG Region*). The DWR estimates that the state has a groundwater overdraft of approximately 1 to 2 maf in average years.¹⁷

**TABLE 3.18.2-6
GROUNDWATER DEPENDENCE IN THE SCAG REGION**

Hydrologic Region	Percentage of Total Urban and Agricultural Water Supply Provided by Groundwater
Central Coast ^a	86%
South Coast ^b	34%
South Lahonton ^c	66%
Colorado River ^d	9%

NOTE:

^a Includes part of Ventura County. The remainder is outside of the SCAG Region.

^b Includes Orange County, most of San Diego and Los Angeles counties, parts of Riverside, San Bernardino, Ventura, Kern and Santa Barbara counties.

^c Includes most of San Bernardino County, as well as Inyo, and parts of Mono, Kern and Los Angeles counties.

^d Includes all of Imperial County, most of Riverside, and parts of San Bernardino and San Diego counties.

Recent efforts to store recycled water and surplus water in groundwater basins for use during drought periods have proven successful. MWD has 10 projects with various water agencies for groundwater storage, resulting in approximately 421,900 af of added capacity per year.¹⁸ A number of agencies within the region are also active in the recharge of surface water, including the Orange County Water District, Los Angeles County Department of Water and Power, Foothill Municipal Water District, San Bernardino County Water and Flood Control District, Coachella Valley Water District, the Water Replenishment District of Southern California, the San Gabriel Valley Municipal Water District, and the Calleguas Municipal Water District.

Reclaimed/Recycled Water (Regional Wastewater Management)

Water reclamation and recycling involves the secondary, and sometimes tertiary, treatment of polluted groundwater and wastewater effluent. Recycled water is used for three main purposes: ocean outfall, in-stream discharge, or reuse. Recycled water may be reused for many purposes, including landscape irrigation, surface water amenities in public places, including parks, industrial processes, groundwater recharge, and nonpotable interior uses such as toilets. The use of recycled water for these various purposes augments the region's local water supplies and reduces reliance on water imports. According to MWD, current recycled water projects, either planned or in operation in the SCAG region, will account for approximately 751,384 af annually by the year 2020.¹⁹

Recycled water could be a significant source of water for industry, which often needs highly processed, but nonpotable water for industrial processes. Recycled water can also play a major role in replenishing saltwater intrusion barriers and other groundwater sources, but there are still significant hurdles to these uses with regards to health regulations, cost, and public acceptance of water recycling.

Storage

Water agencies in the region are also modifying existing reservoirs or creating new reservoirs to accommodate the expected future growth in water demand. MWD has completed filling Diamond Valley Lake near Hemet in Riverside County. This reservoir provides approximately 800,000 acre-feet of additional storage. In addition to surface storage, MWD is implementing various groundwater storage projects both within the SCAG area and in other areas of California. These "conjunctive use" projects store excess water during wet years in underground basins and can be accessed during dry years when surface water supplies are limited.

The SCAG region currently has more than 3.5 million af of storage capacity in all of its reservoirs; however, the anticipated increase in the region's population and growing uncertainty regarding water imports make increasing storage capacity a priority for the region. Increasing storage capacity can be a difficult process, with associated social and environmental impacts.²⁰

Imported Water

Imported sources of water (including the Colorado River Aqueduct, the State Water Project's California Aqueduct, and the Los Angeles Aqueduct) currently supply approximately 3 million af of water to the SCAG region annually, accounting for nearly two-thirds of the total water used in the region.²¹

Access to water in the SCAG region has traditionally been a potential constraint to growth, since local supplies alone are unable to support expansive development. Beginning with the completion of the Los Angeles Aqueduct in 1913, the region has imported water from other parts of the state to supplement local supplies.

The All-American Canal and Coachella Canal were completed in 1940, supplying water to irrigation districts in the Imperial and Coachella Valleys for agricultural operations. The Colorado River Aqueduct, completed in 1941 by MWD, brings Colorado River water to the urban coastal areas, ranging from Ventura County to San Diego County. The California Aqueduct, completed in the 1970s, delivers water from the Sacramento Delta to MWD for distribution to retail agencies throughout Southern California. **Figure 3.18.2-4, *Imported Water Areas Serviced by State Water Project***, depicts the areas served by these imported water supplies.

Watershed Management

Watershed management relates to sustaining watersheds at an acceptable level of quality, contributing to resource quality, and maintaining groundwater supplies. The watersheds in the SCAG region are shown in **Figure 3.10.2-2, *Watersheds in the SCAG Region***. These large watersheds are further divided into smaller sections by internal surface water drainage areas and groundwater basins.

Colorado River

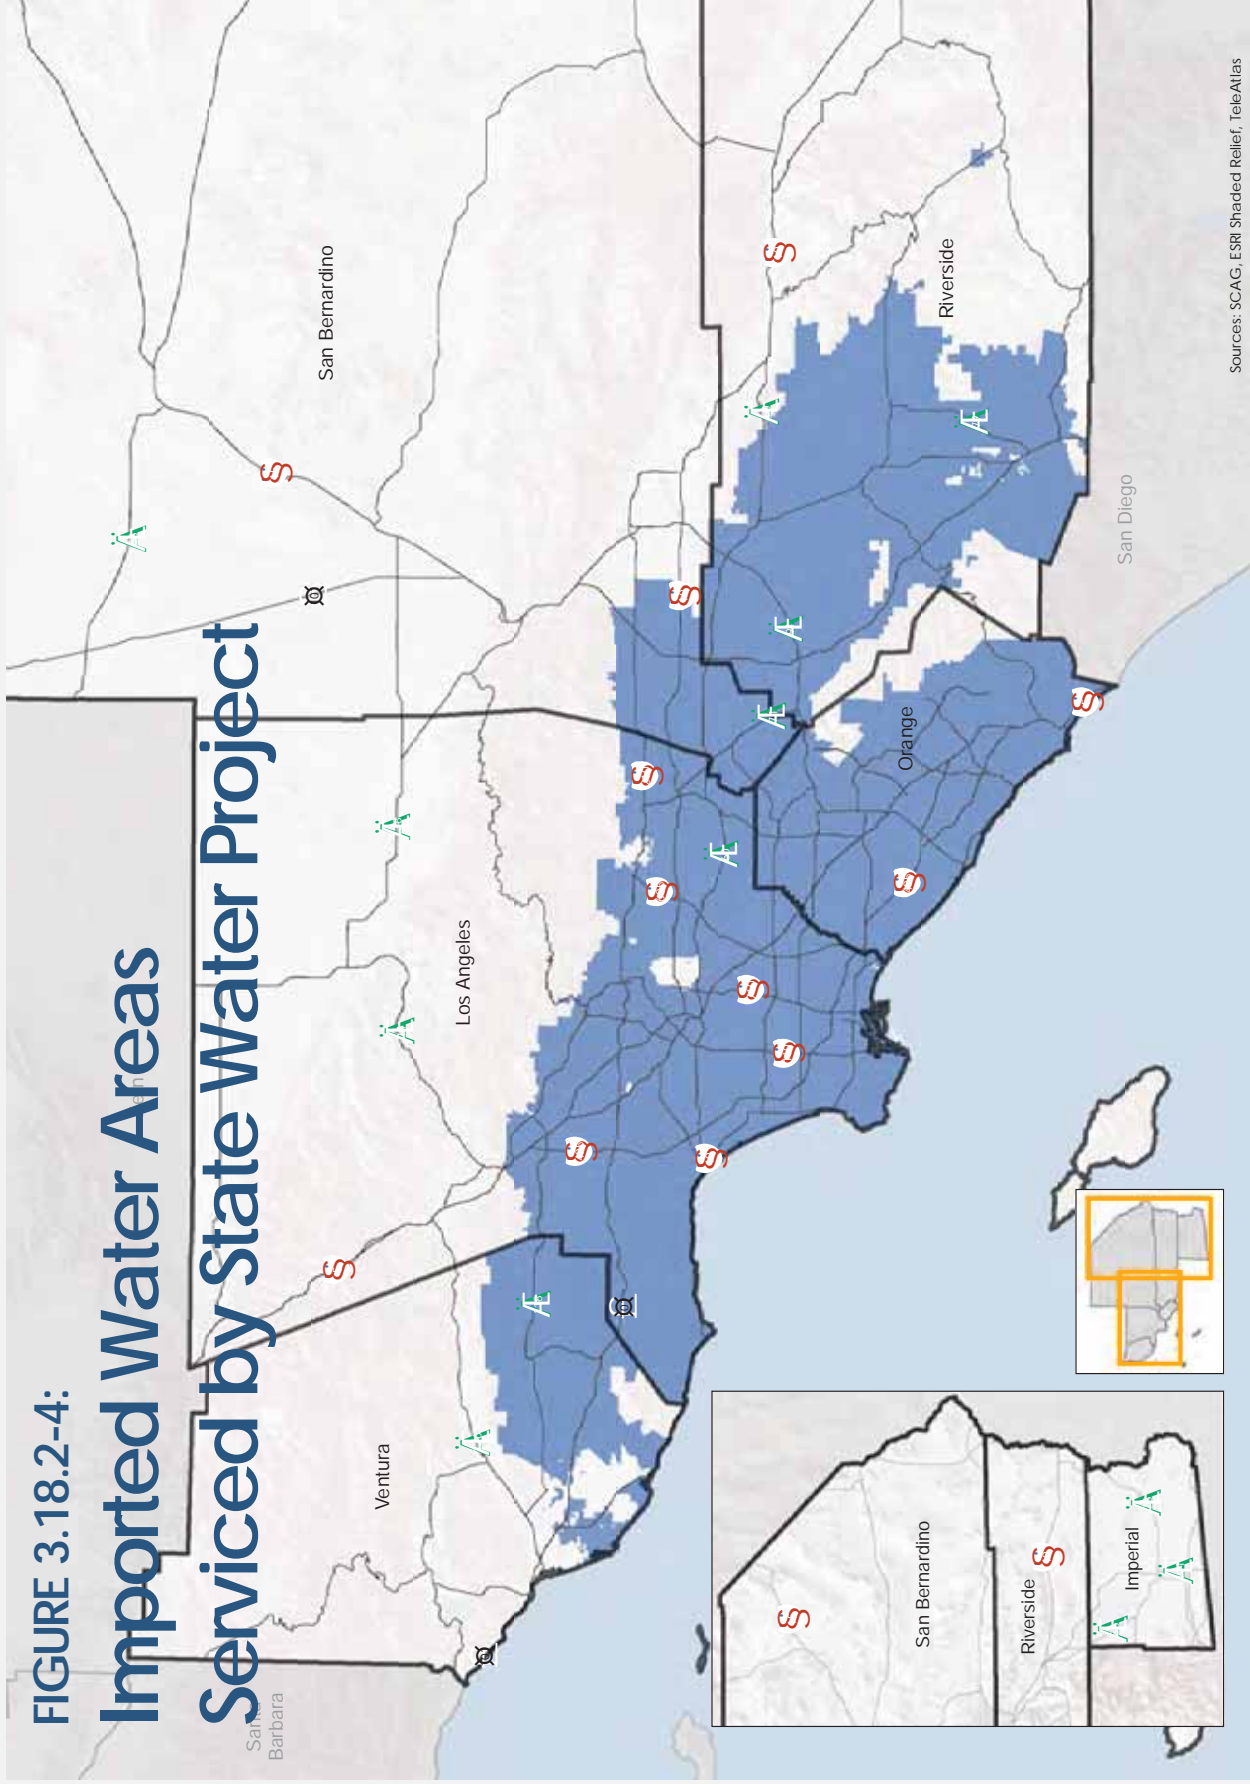

The Colorado River is a major source of water for Southern California, and is imported via the Colorado River Aqueduct, owned and operated by MWD. The Colorado River Region is of particular concern because it encompasses the Coachella Valley in the West Basin and the desert in the East Basin. Irrigation needs in the Coachella Valley are met almost exclusively by water imported from the Colorado River. Historical extraction of groundwater in the Coachella Valley has caused overdraft. Currently, an extensive groundwater recharge project is being undertaken by the Coachella Valley Water District that recharges Colorado River Water into spreading basins. Within the East Basin, irrigation and domestic water is provided by the Colorado River with only approximately 1 percent groundwater use and little direct reclamation. Agricultural runoff and some domestic wastewater do get returned to the Colorado River. Therefore, the water source at the southern end of the watershed is actually a mixture of Colorado River water, agricultural runoff, and reclaimed water.

Under water delivery contracts with the United States, California entities have enjoyed legal entitlements to Colorado River water since the early twentieth century. There have been several compacts, treaties, and negotiations between the seven states that use Colorado River water, beginning with the 1922 Colorado River Compact. California was entitled to 4.4 million af, as well as half on any surplus, as defined by the U.S. Department of the Interior. Typically, the river's surplus has allowed California entities to take an additional 800,000 af annually.

However, with increased urbanization in the Colorado River Basin states and limitation agreements between those states, surplus water for California was eliminated; the State will gradually return to its original allotment of 4.4 million af. Given these new terms, California water agencies are pursuing various strategies to offset this gradual, but certain loss of future water supply. Examples of these strategies include additional reservoir and storage agreements, new water transfers between

FIGURE 3.18.2-4:

Imported Water Areas Serviced by State Water Project

Sources: SCAG, ESRI Shaded Relief, TeleAtlas

State Water Project Serviced Area

agricultural and urban users, and more water conservation and recycling.²²

A record eight-year drought in the Colorado River basin has reduced current reservoir storage throughout the river system to just over 50 percent of total storage capacity.²³

State Water Project

The State Water Project supplies water to Southern California via the California Aqueduct, with delivery points in Los Angeles, San Bernardino, and Riverside Counties. SWP was constructed and is managed by DWR, and is the largest state-owned, multipurpose water project in the country. State Water Project has historically provided 25 to 50 percent of MWD's water, anywhere from 450,000 af to 1.75 million af annually.²⁴ Southern California's maximum State Water Project yield is about 2.0 million af per year. The State Water Project provides water to approximately 25 million people and irrigation water for roughly 750,000 acres of agricultural lands annually.

In 2007, a federal judge ordered the pumps that bring water from the Sacramento Bay Delta into Southern California be shut off, to protect an endangered fish species, the Delta smelt. Although pumping later resumed, it did so at only two-thirds of capacity, reducing by one-third the amount of water coming into Southern California through that system. It is unclear when, or even if, full capacity pumping will resume. The situation in the Bay Delta highlights the uncertainty and vulnerability of the region's dependence on imported water. Although the situation in the Delta will eventually be resolved, it will likely be a matter of decades before a satisfactory new system is in place.

Los Angeles Aqueduct

The Los Angeles Aqueduct, originally built in 1913, carries water 233 miles south from Owens Valley to Los Angeles. The original aqueduct project was extended in 1940 to the Mono Basin. The system was supplemented by a second project, parallel to the first, completed in 1970. These two aqueducts have historically supplied an average of approximately 256,000 af per year in normal years, and as little as 106,000 af per year in drier years.²⁵ Recent deliveries have been cut almost in half due to dwindling Sierra snowpack and a court decision restricting the amount of water that can be removed from the Owens Valley and Mono Basin in order to restore their damaged ecosystems.

Transfers

In an effort to diversify water sources and reduce reliance on specific water imports, water agencies have engaged in water transfer agreements. These contractual agreements, made with irrigation districts, reduce water use on agricultural lands either through agricultural conservation or fallowing land.²⁶ The water “freed” by these reductions is transferred to a municipal water district, where it may be used or stored in aquifers for future use, a practice called *water banking*. Water banking is also done during wet years, when rainwater is collected and directed toward recharge facilities for future use.

Water Suppliers

The SCAG region is served by many water suppliers, both retail and wholesale; the largest of these agencies is MWD. Created under state law in 1931, MWD serves the urbanized coastal plain from Ventura to the Mexican border in the west to parts of the rapidly urbanizing counties of San Bernardino and Riverside in the east. It provides water to about 90 percent of the urban population of Southern California. MWD is comprised of 26 member agencies, 12 of which supply wholesale water to retail agencies and other wholesalers, and 14 of which are individual cities which directly supply water to their residents. The Imperial Irrigation District (IID) in Imperial County, the largest irrigation district in the country, and the Palo Verde Irrigation District primarily serve agricultural users.

Solid Waste

Solid waste diversion at the SCAG region is primarily done with landfills. Over the past 13 years, disposal tonnage has decreased significantly in the SCAG region as the emphasis on recycling to meet the requirements of AB 939 has served to divert tonnage from landfills and conserve landfill capacity. Table 3.18.2-7, *Solid Waste Disposed of in the SCAG Region—2014*, shows data from the CalRecycle’s Solid Waste Information System (SWIS) regarding the number of tons disposed in 2014 (the most recent year for which information is available), for each county in the SCAG region and the total tonnage for the state. The total amount of solid waste disposed of in SCAG is 11.9 million tons. This is about 50 percent of the total solid waste disposed of for all of California.

²⁶ Some urban agencies also have the ability to enter “spot” water markets and to purchase water on an “as needed” basis.

Waste Diversion and Recycling

Since the enactment of AB 939 in 1989, local governments have implemented recycling programs on a widespread basis, making efforts to meet the 25 percent and 50 percent diversion mandates of AB 939. Statewide, the CWIMB reports that diversion increased from 10 percent in 1989 to 42 percent in 2000 and to 48 percent in 2002. Recent legislation, AB 341, requires that 75 percent of the waste stream be recycled by 2020 and planning is under way to achieve that goal.

Landfills

A landfill is a waste management unit at which waste is discharged in or on land for disposal. Landfills do not include surface impoundment, waste pile, land treatment unit, injection well, or soil amendments.²⁷ Landfills that receive solid waste in the SCAG region are listed in **Table 3.18.2-8, SCAG Region Active Solid Waste Disposal Landfills by County**.

²⁷ California Department of Resources Recycling and Recovery (CalRecycle). Accessed 15 September 2015. *Landfills*. Available at: <http://www.calrecycle.ca.gov/SWFacilities/Landfills>

In viewing facilities on a county-by-county basis, it is important to note that landfills in one county may import waste generated elsewhere. Currently, Orange County offers capacity to out-of-county waste at a “tipping fee” low enough to attract waste from Los Angeles and San Bernardino Counties. In Riverside County, the El Sobrante Landfill is licensed to accept up to 10,000 tons of waste per day from Riverside, Los Angeles, Orange, San Diego, and San Bernardino Counties. In Ventura County, 25 percent of the waste accepted by the Simi Valley Landfill & Recycling Center comes from other counties. **Figure 3.18.2-5, *Landfill Locations in the SCAG Region***, show the landfill locations spatially.

3.18.3 THRESHOLDS OF SIGNIFICANCE

The potential for the 2016 RTP/SCS to result in impacts related to utilities and service systems was analyzed in relation to the questions contained in Appendix F of the CEQA Guidelines. The Plan would result in a potentially significant impact if it would:

- Exceed wastewater treatment requirements of the applicable Regional Water Quality Control Board.
- Require or result in the construction of new water or wastewater treatment facilities or expansion of existing facilities, the construction of which could cause significant environmental effects.
- Require or result in the construction of new storm water drainage facilities or expansion of existing facilities, the construction of which could cause significant environmental effects.
- Have sufficient water supplies available to serve the project from existing entitlements and resources or will require new or expanded entitlements.
- Result in a determination by the wastewater treatment provider that serves or may serve the project that it does not have adequate capacity to serve the project’s projected demand in addition to the provider’s existing commitments.
- Be served by a landfill with sufficient permitted capacity to accommodate the project’s solid waste disposal needs.
- Does not comply with federal, state, and local statutes and regulations related to solid waste.

Methodology

The methodology for determining the significance of impacts utilities and service systems compares existing conditions to the expected future use of potable water supplies, wastewater, stormwater facilities, and landfills with the Plan. The criteria above were applied to compare current energy usage to expected future 2040 Plan conditions.

Implementation of the 2016 RTP/SCS would affect the use of utility and service systems in the SCAG region. The analysis of these impacts is programmatic at the regional level. The Plan would result in impacts to utilities and service systems as a result of increased impervious surfaces associated with new and expanded and rehabilitated transportation infrastructure and potential changes in residential and commercial land use patterns, particularly in HQTAs associated with implementation of the 2016 RTP/SCS.

3.18.4 IMPACT ANALYSIS

IMPACT USS-1: Potential to exceed wastewater treatment requirements of the applicable Regional Water Quality Control Board.

Less than Significant Impact

Transportation projects or development encouraged by land use strategies included in the 2016 RTP/SCS would result in less than significant impacts in relation to wastewater treatment requirements of the applicable RWQCB, because there is adequate capacity to accommodate the anticipated growth in population over the planning horizon. Wastewater treatment facilities throughout the SCAG region can accommodate 3,018.17 million gallons per day (MGD). The remaining wastewater treatment capacity in the SCAG region is estimated at 54 percent remaining (Table 3.18.2-1). However, recycling of waters and treatment of wastewaters would reduce the amount of wastewater to be discharged, although the total benefits from wastewater reduction would be limited. Population growth over the four year period is about 17 percent, and the average household has conserved at least 17 percent or more per EO B-29-15.

. Given that wastewater generation rates are closely tied to population growth and that the total population is expected to grow by approximately 17 percent across the SCAG region by 2040, wastewater generation would proportionally increase by up to 17 percent (513 MGD) or 31 percent of the remaining capacity. While Wastewater generation would increase over the planning horizon for the 2016 RTP/SCS, it will not exceed the wastewater treatment capacity, or the RWQCB standards for treatment of wastewater in the SCAG region.

Additionally, water conservation practices and compliance with best management practices (i.e., low flow toilets and automatic sinks) are likely to substantially reduce wastewater. Assuming that wastewater capacity would be shared among the agencies in each county and that population growth would be somewhat dispersed throughout the SCAG region, it is estimated that the SCAG region would not outgrow its wastewater treatment capacity by the year 2040 due to aggressive water conservation strategies. Impacts would be less than significant, and the consideration of mitigation measures is not required.

IMPACT USS-2: Potential to require or result in construction of new water or wastewater treatment facilities or expansion of existing facilities, the construction of which could cause significant environmental effects.

Less than Significant Impact

Transportation projects or development encouraged by land use strategies included in the 2016 RTP/SCS would result in less than significant impacts in relation to construction of new water or wastewater treatment facilities or expansion of existing facilities effects. Although wastewater generation will increase over the planning horizon for the 2016 RTP/SCS, it will not exceed the wastewater treatment capacity or the RWQCB standards for treatment of wastewater in the SCAG region. While the RTP/SCS encourages changes in residential and commercial land use patterns, it does not induce growth beyond that anticipated for the SCAG region; therefore, the 2016 RTP/SCS would not be expected to require or result in construction of new water or wastewater treatment facilities or expansion of existing facilities. As stated before, water conservation is likely to substantially reduce increases in wastewater. The remaining wastewater treatment capacity, in the SCAG region, is estimated at 54 percent (Table 3.18.2-1) Wastewater generation rates are closely tied to population growth, and the total population is expected to grow by approximately 17 percent across the SCAG region by 2040; therefore, wastewater generation could increase by up to 17 percent (513 MGD) or 31 percent of the remaining capacity. Broadly assuming that wastewater capacity would be shared among the agencies in each county and that population growth would be somewhat dispersed throughout the SCAG region, it is estimated that the SCAG region would not outgrow its wastewater treatment capacity by the year 2040 especially given aggressive water conservation strategies. Therefore, impacts would be less than significant, and the consideration of mitigation measures is not required.

IMPACT USS-3: Potential to require or result in construction of new storm water drainage facilities or expansion of existing facilities, the construction of which could cause significant environmental effects.

Significant Impact

Transportation projects or development encouraged by land use strategies included in the 2016 RTP/SCS would require or result in construction of new storm water drainage facilities or expansion of existing facilities, the construction of which could cause significant environmental effects. The new, expanded, rehabilitated transportation improvement projects, and other development encouraged by land use strategies. that comprise the Plan would require or result in construction of new storm water drainage facilities or expansion of existing facilities that have the potential to result in significant environmental effects, requiring the consideration of mitigation measures. Projects that increase impervious surface areas including new development may increase urban runoff. This would result in greater quantities of contaminants to receiving waters that may currently be impaired, and would require the construction of new storm water drainage facilities or expansion of existing ones. Construction activities related or identified in the Plan could increase pollutant loads carried by storm water runoff. For example, road cut erosion can increase long-term siltation in local receiving waters. Studies from across the country report that roads, parking lots, and sidewalks comprise 55 to 75 percent of existing impervious surface areas. Residential, commercial, and industrial structures constitute the remaining 25 to 45 percent. These factors explain the inverse relationship between water quality and

impervious area, which tends to become problematic when impervious surfaces within a watershed exceed 10 percent of land area. Where this percentage is greater than 25 percent, water quality is generally degraded and inhospitable for habitat or for recreation activities.²⁸ In addition, many of the pollutants in urban runoff are attributable to landscape irrigation, highway runoff, and illicit dumping. Highway runoff is a component of urban runoff contributing oil and grease, sediment, nutrients, heavy metals, and toxic substances.

The 2016 RTP/SCS would increase impervious surfaces in the SCAG region through a combination of transportation projects and development, resulting in construction or expansion of water drainage facilities (Table 3.18.4-1, *Base Year 2012 Lane Miles by County (PM Peak Network)* and Table 3.18-4.2, *2040 Plan Lane Miles by County (PM Peak Network)*). The 2016 RTP/SCS anticipates lane mile additions of approximately 8,000 total lane miles in the region, with the most increase in San Bernardino County (from 14,800 to 17,618 lane miles). Among all facilities, toll has the most increase in lane miles, from 336 in 2012 to 2,149 lane miles in 2040 with the Plan.

SCAG modeling, 2015. *2016 Regional Transportation Plan/Sustainable Communities Strategy: Highways & Arterials Appendix*. Los Angeles, CA.

With the implementation of the 2016 RTP/SCS, approximately 8,000 new lane miles for all facilities would be added to the region (Table 3.18.4-1 and Table 3.18.4-2). Some of the lane additions may be constructed using existing right of way, reducing the contribution to increased impervious surfaces. Rail lines and their associated structures would not be expected to result in a substantial change in the amount of impervious surface, as most would be located within existing rights of way. This would be the case for at-grade and elevated light rail as well as heavy rail. Proposed goods movement enhancement projects would be expected to increase the amount of runoff, creating need for new storm water drainage facilities. Additionally, new lane miles that are expected in 2040 would include new facilities, new right-of-way on existing facilities and/or re-striping of existing facilities. Transportation projects involving construction of new rail lines, new stations, and upgrades to existing stations and anticipated development patterns encouraged by land use strategies are not included in this calculation. Where installation of additional impervious surfaces is required, there would a potential to have adverse impacts on groundwater infiltration.

Under natural conditions, vegetation intercepts and retains rainfall before infiltration or runoff occurs. Without hard-surfaced land areas, this hydrology cycle favors groundwater recharge. With a roadway or other hard surface this infiltration dynamic is impeded. The magnitude of this effect is reported by studies indicating that the volume of storm water washed off one-acre of roadway is about sixteen times greater than that of a comparably sized meadow.²⁹

The increase in impervious surfaces due to additional miles of roadway, in addition to urban development encouraged by land use strategies and associated population distribution in 2040, would increase runoff and potentially affect groundwater recharge rates. However, this should be read together with strategies in the Plan that would encourage the use of a complete street approach to roadway improvements, by including traffic calming, bicycle priority streets (bicycle boulevards), and pedestrian connectivity.³⁰ Additionally, the complete street approach is closely related to the green

²⁹ Scheuler, T.R. 1994. The Importance of Imperviousness. *Watershed Protection Techniques* 1(3): 100-111.

street approach, which uses landscaping element to address runoff and stormwater quality and quantity.³¹ However, when considering the 2016 RTP/SCS as a whole, due to the anticipated 8,000 new lane miles and anticipated development pattern, there would be a potential that construction of new storm water drainage facilities or expansion of existing facilities would be needed, thereby resulting in a potentially significant impact, requiring the consideration of mitigation measures.

IMPACT USS-4: Potential to have sufficient water supplies available to serve the project from existing entitlements and resources or will require new or expanded entitlements.

Significant Impact

The 2016 RTP/SCS could result in insufficient water supplies available to serve the transportation projects and anticipated development from existing entitlements and resources or would require new or expanded entitlements, resulting in significant impacts requiring the consideration of mitigation measures. Transportation projects and land use patterns encouraged and/or identified in the Plan would have the potential to generate consumptive use of water that may exceed available water supply due to vulnerability and uncertainty of water supply, in relation to climate variability, resulting from increased temperatures and wildlife fires, as well as regulatory or legislative decisions that could affect the availability of imported water. Water agencies in the SCAG region produce Urban Water Management Plans (UWMPs) and other long-range planning studies to provide a system adequate to supply water demand. At existing usage rates, the existing water supplies and infrastructure would not be sufficient to meet demand in 2040.³² The volume of water and water delivery infrastructure currently available within the SCAG region would not be sufficient to meet the future multiple dry year or average year water demand in 2040. As population increases and disperses throughout the SCAG region, the demand for municipal water would increase. Development attributed to land use strategies would also increase water demand. However, many agencies are implementing aggressive water conservation, recycling and planning strategies (water transfer and water banking) to sustain the supply of water during wet and dry years. The City of Los Angeles for example has maintained relatively constant water demand over the past ten years as a result of water conservation, and the 2010 UWMP³³ anticipates that water demand will continue to remain relatively constant through the year 2040 despite increasing population. Additionally, the proposed land use strategies in the 2016 RTP/SCS would have a potential to result in more compact development and smaller single-family lots in urbanized areas such as high quality transit areas (HQTAs). Compact development pattern tends to consume water more efficiently (also see Section 3.10, *Hydrology and Water Quality*, of this PEIR). When considering the 2016 RTP/SCS as a whole for the region, there would be a potential to exceed water supplies, constituting a potentially significant impact.

Meeting future water demand is the responsibility of local and regional water agencies. Water supplies are either produced locally from groundwater and surface water sources or are imported via the Los

Angeles Aqueduct, the California Aqueduct, the Colorado River Aqueduct, the All American Canal, or the Coachella Canal. Other means of providing water without increasing imported supplies include reclamation and recycling, conservation, water transfers, groundwater banking, developing brackish groundwater, and ocean desalination.

The Urban Water Management Plan Act of 1990 requires that local water agencies prepare plans showing projected water supplies and demands for average years and multiple dry years. These plans are updated every five years. As part of the statewide continued efforts on reducing water usage, the UWMP has been amended to further require urban water suppliers to include narrative descriptions of their water demand management measures in the UWMPs. The descriptions includes discussion on progress on water demand management measures implemented over the last five year, and identify additional measures and water saving practices that will help suppliers achieve water use reduction targets. Additionally, the amended Act requires UWMPs to quantify distribution system water losses as a new category of past and current water use, and allows water use projections to account for estimated water savings resulting from implementation of applicable codes, building design standards, ordinances, and transportation and land use plans. SCAG will monitor the implementation of the amended Act and provide updates to the Regional Council and Policy Committees. Some water agencies project average year water deficits by the year 2020 if current management and supply efforts are not augmented. Other agencies project no deficits owing to the development of new supplies and management efforts.³⁴ These projections all face the same uncertainty in regard to the long-term effects of global climate change on the region's water supply.

The Metropolitan Water District of Southern California has prepared the 2010 Integrated Water Resources Plan (IRP)³⁵ that provides a roadmap for maintaining regional water supply reliability over the next 25 years. The framework places an increased emphasis on regional collaboration. Earlier plans dating back to 1996 set a regional reliability goal of meeting full-service demands at the retail level under all foreseeable hydrologic conditions. This updated plan seeks to stabilize Metropolitan's traditional imported water supplies and to continue developing additional local resources.

It also advances long-term planning for potential future contingency resources, such as storm water capture and large-scale seawater desalination, in close coordination with MWD's 26 member public agencies and other utilities. The updated IRP strikes a balance through a three-component approach:

- A core resources strategy represents baseline efforts to manage water supply and demand conditions and to stabilize MWD's traditional imports from the Colorado River and Northern California through the Sacramento-San Joaquin Delta. This strategy is based on known factors, including detailed planning assumptions about future demographic scenarios, water supply yields, and a range of observed historical weather patterns. Under this strategy, MWD and its member agencies will advance water use efficiency through conservation and recycling, and with further local development such as groundwater recovery and seawater desalination.

³⁴ California Department of Water Resources, U.S. Bureau of Economic Analysis. Accessed 16 November 2015.: Urban Waste Management Plans. Available at: <http://www.water.ca.gov/urbanwatermanagement/>

³⁵ Metropolitan Water District of Southern California. Accessed 16 November 2015. Integrated Water Resources Plan. Available at: http://www.mwdh2o.com/Reports/2.4.1_Integrated_Resourses_Plan.pdf

- A cost-effective “supply buffer” will enable the region to adapt to future circumstances and foreseeable challenges. The buffer seeks to help protect the region from possible shortages caused by conditions that exceed the core resources strategy, starting with increased conservation and water-use efficiency on a region-wide basis.
- Foundational actions guide the region in determining alternative supply options for long-range planning. If future changed conditions—such as climate change or the availability of resources—exceed what is covered by MWD’s core resources and supply buffer, these alternatives would provide a greater contribution to water reliability than MWD’s imported water sources or any other single supply. These actions—including feasibility studies, research and regulatory review—would provide the foundation to develop alternative resources, if needed.

Over 80 percent of the projected population in the SCAG region for the year 2040 is within the MWD service area.³⁶ Additionally, the majority of development encouraged by land use strategies would potentially result in a distributed pattern. It is anticipated that moderate density development in suburban areas, and compact development in urbanized areas, would reduce the need to extract and haul waters to distances outside of the urbanized and undeveloped areas excessively. Supplying the water necessary to meet future demand and/or minimizing that demand based on anticipated land use distribution would mitigate anticipated impacts. Each water district develops its own policy for determining its planning horizon and for acquiring and building water facilities. Water districts would provide water for the growth planned and authorized by the appropriate land use authority. However, given the challenges to imported water supplies, meeting future demand is difficult. Therefore, impacts would be significant, requiring the consideration of mitigation measures.

IMPACT USS-5: Potential to result in a determination by the wastewater treatment provider which serves or may serve the project that it has adequate capacity to serve the project’s projected demand in addition to the provider’s commitments.

Less than Significant Impact

The 2016 RTP/SCS would result in potentially significant impacts in relation to a determination by the wastewater treatment provider which serves or may serve the existing population that it has adequate capacity to serve the future population demand, in addition to the provider’s existing commitments. Table 3.18.2-2 illustrates the capacity of wastewater treatment plants within the Plan area. Wastewater generation rates are closely tied to population growth, and the total population is expected to grow by approximately 20.7 percent across the SCAG region by 2040 (Table 3.14.2-1 in Section 3.14, *Population, Housing and Employment*, of this PEIR); therefore, wastewater generation could increase as well. The projected development would increase demand for wastewater treatment facilities. The proposed development projects would either be accommodated by existing infrastructure, or project proponents would be required, by local ordinances and state regulations, to make wastewater infrastructure improvements. In less developed areas of the region, new housing and employment developments would require additional wastewater infrastructure and control measures to minimize additional

³⁶ Metropolitan Water District of Southern California. n.d. Members Agency Map.

wastewater generation. The higher density development proposed as part of the 2016 RTP/SCS would also require construction of wastewater infrastructure with greater conveyance capacity, which would result in a significant impact. Additional wastewater could enter the existing wastewater treatment facilities and overload the current capacity levels of the wastewater treatment facilities. Supplying the water necessary to meet future demand and/or minimizing that demand would mitigate anticipated impacts. Each water district develops its own policy for determining its planning horizon and for acquiring and building water facilities. Water districts provide water for the growth planned and authorized by the appropriate land use authority. However, given the challenges to imported water supplies, meeting future demand is difficult. The remaining wastewater treatment capacity, in the SCAG region, is estimated at 54 percent (Table 3.18.2-1) Wastewater generation rates are closely tied to population growth, and the total population is expected to grow by approximately 17 percent across the SCAG region by 2040; therefore, wastewater generation could increase by up to 17 percent (513 MGD) or 31 percent of the remaining capacity. Broadly assuming that wastewater capacity would be shared among the agencies in each county and that population growth would be somewhat dispersed throughout the SCAG region, it is estimated that the SCAG region would not outgrow its wastewater treatment capacity by the year 2040 especially given aggressive water conservation strategies. There is a less than significant impact in relation to a determination by the wastewater treatment provider which serves or may serve the existing population that it has adequate capacity to serve the future population demand, in addition to the provider's existing commitments, requiring the consideration of mitigation measures.

IMPACT USS-6: Potential to be served by a landfill with sufficient permitted capacity to accommodate the project's solid waste disposal needs.

Significant Impact

The construction and operation of transportation projects and the land use development that would result from the strategies considered in the 2016 RTP/SCS would have the potential to result in significant impacts, on a case-by-case basis, where there is insufficient capacity in the landfill designated for the project area to accommodate the r solid waste disposal needs. Although there are over 40 landfills that serve the SCAG region (Table 3.18.2-8), the total population is expected to grow by approximately 21 percent across the SCAG region by 2040 (Table 3.14.2-1 in Section 3.14, *Population, Housing and Employment, of this PEIR*). Existing landfills are currently operating at 80 percent capacity across the SCAG region (Table 3.18.2-7). Per capita generation of solid waste is decreasing across the SCAG region due to increased recycling, compliance with the requirements of AB 939 and other sustainable conservation measures. Additionally, transportation projects and development encouraged by land use strategies would be required to comply with AB 341, in which 75 percent of the waste stream be recycled by the year 2020. However, the potential to exceed capacity over the planning horizon remains significant, requiring the consideration of mitigation measures.

IMPACT USS-7: Potential to comply with federal, state, and local statutes and regulations related to solid waste.

Less than Significant Impact

Construction and operation of transportation projects and development encouraged by land use strategies identified in the 2016 RTP/SCS would be required to comply with federal, state, and local statutes and regulation related to solid waste, including County and City General Plan also include goals and policies for recycling and diversion of solid waste to ensure compliance with the California Integrated Waste Management Act (AB 9393), the California Solid Waste Reuse and Recycling Act, and the Solid Waste Diversion Rule (AB 341). There are over 40 landfills that serve the SCAG region (Table 3.18.2-8). Existing landfills are currently operating at 80 percent capacity across the SCAG region (Table 3.18.2-7). The effectiveness of county and city general plan goals and policies in the SCAG region in facilitating compliance with federal, State, and local statutes and regulations related to solid waste is evident in the data that demonstrates per capita generation of solid waste is decreasing across the SCAG region due to increased recycling, compliance with the requirements of AB 939 and other sustainable conservation measures. Additionally, transportation projects and development encouraged by land use strategies would be required to comply with AB 341, in which 75 percent of the waste stream be recycled by the year 2020. Therefore, impacts would be less than significant, and the consideration of mitigation measures is not required.

3.18.5 CUMULATIVE IMPACTS

IMPACT USS-1: Potential to exceed wastewater treatment requirements of the applicable Regional Water Quality Control Board.

Less than Significant Cumulative Impact

The 2016 RTP/SCS would be expected to contribute to less than significant cumulative impacts incrementally with related projects in the SCAG region to contributing to exceeding wastewater treatment requirements. Wastewater treatment facilities throughout the SCAG region can accommodate 3,018.17 million gallons per day (MGD). The remaining wastewater treatment capacity in the SCAG region is estimated at 54 percent remaining (Table 3.18.2-1). However, recycling of waters and treatment of wastewaters would reduce the amount of wastewater to be discharged, although the total benefits from wastewater reduction would be limited.

IMPACT USS-2: Potential to require or result in construction of new water or wastewater treatment facilities or expansion of existing facilities, the construction of which could cause significant environmental effects.

Less than Significant Cumulative Impact

The 2016 RTP/SCS would be expected to contribute to less than significant cumulative impacts incrementally with related projects in the SCAG region to contributing to new water or wastewater treatment facilities or expansion of existing facilities. Although wastewater generation will increase

over the planning horizon for the 2016 RTP/SCS, it will not exceed the wastewater treatment capacity or the RWQCB standards for treatment of wastewater in the SCAG region. While the RTP/SCS encourages changes in residential and commercial land use patterns, it does not induce growth beyond that anticipated for the SCAG region; therefore, the 2016 RTP/SCS would not be expected to require or result in construction of new water or wastewater treatment facilities or expansion of existing facilities.

IMPACT USS-3: Potential to require or result in construction of new storm water drainage facilities or expansion of existing facilities, the construction of which could cause significant environmental effects.

Significant Cumulative Impact

The 2016 RTP/SCS would be expected to contribute incrementally with related projects in the SCAG region to significant cumulative impacts on contributing to new stormwater drainage systems. Paved surfaces and drainage conduits can accelerate the velocity of runoff, concentrating peak flows in downstream areas faster than under natural conditions. Significant increases to runoff and peak flow can overwhelm drainage systems and alter flood elevations in downstream locations. Increased runoff velocity can promote scouring of existing drainage facilities, reducing system reliability and safety.

IMPACT USS-4: Potential to have sufficient water supplies available to serve the project from existing entitlements and resources or will require new or expanded entitlements.

Significant Cumulative Impact

The 2016 RTP/SCS would be expected to contribute incrementally with related projects in the SCAG region to significant cumulative impacts on having sufficient water supplies available to serve the project. The volume of water and water delivery infrastructure currently available within the SCAG region would not be sufficient to meet the future multiple dry year or average year water demand in 2040. As population increases and disperses throughout the SCAG region, the demand for municipal water would increase. Development attributed to land use strategies would also increase water demand. The 2016 RTP/SCS would contribute to cumulative significant impacts in the region in consideration of related projects in regard to water supply. Much of the water that is consumed in the SCAG region is imported from other parts of the state. As a result, any increase in water demand in the SCAG region would affect areas outside the region by consuming water that could be used in other areas. As noted above, it is anticipated that aggressive water conservation as well as other water management strategies (water transfers, water banking, etc.) will result in adequate supplies to the region. However, due to the uncertainties associated with water supply and management, this impact is considered cumulatively considerable.

IMPACT USS-5: Potential to result in a determination by the wastewater treatment provider which serves or may serve the project that it has adequate capacity to serve the project's projected demand in addition to the provider's commitments.

Less than Significant Cumulative Impact

The 2016 RTP/SCS would be expected to contribute incrementally with related projects in the SCAG region to less than significant cumulative impacts on having sufficient wastewater treatment capacity to serve the project. The projected development would increase demand for wastewater treatment facilities. The proposed development projects would either be accommodated by existing infrastructure, or project proponents would be required, by local ordinances and state regulations, to make wastewater infrastructure improvements. In less developed areas of the region, new housing and employment developments would require additional wastewater infrastructure and control measures to minimize additional wastewater generation. The higher density development proposed as part of the 2016 RTP/SCS would also require construction of wastewater infrastructure with greater conveyance capacity, which would result in a significant impact. The 2016 RTP/SCS would contribute to cumulative less than significant impacts to wastewater treatment facilities within the region.

IMPACT USS-6: Potential to be served by a landfill with sufficient permitted capacity to accommodate the project's solid waste disposal needs.

Significant Cumulative Impact

The 2016 RTP/SCS would be expected to contribute incrementally with related projects in the SCAG region to significant cumulative impacts on having sufficient landfill capacity. Existing landfills are currently operating at 80 percent capacity across the SCAG region (Table 3.18.2-7). Per capita generation of solid waste is decreasing across the SCAG region due to increased recycling, compliance with the requirements of AB 939 and other sustainable conservation measures. Additionally, transportation projects and development encouraged by land use strategies would be required to comply with AB 341, in which 75 percent of the waste stream be recycled by the year 2020. However, the potential to exceed capacity over the planning horizon remains significant.

IMPACT USS-7: Potential to comply with federal, state, and local statutes and regulations related to solid waste.

Less than Significant Cumulative Impact

The 2016 RTP/SCS would be expected to contribute to less than significant cumulative impacts incrementally with related projects in the SCAG region regarding complying with federal, state, and local statutes and regulations related to solid waste. The effectiveness of County and city general plan goals and policies in the SCAG region in facilitating compliance with federal, State, and local statutes and regulations related to solid waste is evident in the data that demonstrates per capita generation of solid waste is decreasing across the SCAG region due to increased recycling, compliance with the requirements of AB 939 and other sustainable conservation measures. Additionally, transportation

projects and development encouraged by land use strategies would be required to comply with AB 341, in which 75 percent of the waste stream be recycled by the year 2020.

The 2016 RTP/SCS would contribute to cumulative significant impacts in the region in regard to landfill capacity and other regions nearby. Aggressive recycling and other waste diversions programs in the area are reducing the amount of solid waste disposal in the region; however, impacts would remain cumulatively considerable.

3.18.6 MITIGATION MEASURES

Mitigation measures as they pertain to each CEQA question related to utilities and service systems are described below. Mitigation measures are categorized into two categories: SCAG mitigation and project-level mitigation measures. SCAG mitigation measures shall be implemented by SCAG over the lifetime of the 2016 RTP/SCS. Project-level mitigation measures can and should be implemented by Lead Agency for transportation and development projects, as applicable and feasible.

IMPACT USS-3: Require or result in construction of new storm water drainage facilities or expansion of existing facilities, the construction of which could cause significant environmental effects.

SCAG Mitigation Measures

MM-HYD-5(a).

Project-Level Mitigation Measures

MM-USS-3(b): Consistent with the provisions of Section 15091 of the State CEQA Guidelines, SCAG has identified mitigation measures capable of avoiding or reducing the significant effects on utilities and service systems, particularly for construction of storm water drainage facilities including new transportation and land use projects that are within the responsibility of local jurisdictions including the Riverside, San Bernardino, Los Angeles, Ventura, and Orange Counties Flood Control District, and County of Imperial. Where the Lead Agency has identified that a project has the potential for significant effects, the Lead Agency can and should consider mitigation measures to ensure compliance with Regional Water Quality Control Boards of (Regions 4, 6, 8, and 9) pursuant to the provisions of the National Flood Insurance Act, stormwater permitting requirements for stormwater discharges for new constructions, Urban Waste Management Plan, and all other applicable regulations.

Such mitigation measures, or other comparable measures, capable of avoiding or reducing significant impacts on the use of existing storm water drainage facilities and can and should be adopted where Lead Agencies identify significant impacts on new storm water drainage facilities.

MM-HYD-1(b).

IMPACT USS-4: Have sufficient water supplies available to serve the project from existing entitlements and resources or will require new or expanded entitlements.

SCAG Mitigation Measures

MM-USS-4(a)(1): SCAG, in coordination with regional water agencies and other stakeholders, shall encourage the kind of regional coordination throughout California and the Colorado River Basin that develops and supports sustainable water supply management policies in accommodating growth. In particular, SCAG will coordinate with local water agencies to evaluate future water demands and establish the necessary supply and infrastructure to meet that demand, as documented in their Urban Water Management Plans.

MM-USS-4(a)(2): SCAG, in coordination with regional water agencies and other stakeholders, shall facilitate information sharing about the management and status of the Sacramento River Delta, the Colorado River Basin, and other water supply source areas of importance to local water supply.

MM-USS-4(a)(3): SCAG shall encourage regional water agencies, to the greatest extent feasible, to consider potential climate change and attendant impacts on available water supplies and reliability in the process of creating or modifying systems to manage water resources for both year-round use and ecosystem health. As the methodology and base data for such decisions is still developing, SCAG shall encourage public agencies to use the best available science in decision-making regarding future water supply and reliability.

Project-Level Mitigation Measures

MM-USS-4(b): Consistent with the provisions of Section 15091 of the State CEQA Guidelines, SCAG has identified mitigation measures capable of avoiding or reducing the significant effects on water supplies from existing entitlements requiring new or expanded services in the vicinity of HQTAs that are in the jurisdiction and responsibility of public agencies and/or Lead Agencies. Where the Lead Agency has identified that a project has the potential for significant effects, the Lead Agency can and should consider mitigation measures to ensure compliance with EO B-29-15, provisions of the Porter –Cologne Water Quality Control Act, California Domestic Water Supply Permit requirements, and applicable County, City or other Local provisions. Such measures may include the following or other comparable measures identified by the Lead Agency:

- Reduce exterior consumptive uses of water in public areas, and should promote reductions in private homes and businesses, by shifting to drought-tolerant native landscape plantings (xeriscaping), using weather-based irrigation systems, educating other public agencies about water use, and installing related water pricing incentives.
- Promote the availability of drought-resistant landscaping options and provide information on where these can be purchased. Use of reclaimed water especially in median landscaping and hillside landscaping can and should be implemented where feasible.

- Implement water conservation best practices such as low-flow toilets, water-efficient clothes washers, water system audits, and leak detection and repair.
- Ensure that projects requiring continual dewatering facilities implement monitoring systems and long-term administrative procedures to ensure proper water management that prevents degrading of surface water and minimizes, to the greatest extent possible, adverse impacts on groundwater for the life of the project. Comply with appropriate building codes and standard practices including the Uniform Building Code.
- Maximize, where practical and feasible, permeable surface area in existing urbanized areas to protect water quality, reduce flooding, allow for groundwater recharge, and preserve wildlife habitat. Minimized new impervious surfaces to the greatest extent possible, including the use of in-lieu fees and off-site mitigation.
- Avoid designs that require continual dewatering where feasible.
- Where feasible, do not site transportation facilities in groundwater recharge areas, to prevent conversion of those areas to impervious surface.

IMPACT USS-6: Be served by a landfill with sufficient permitted capacity to accommodate the project's solid waste disposal needs.

SCAG Mitigation Measures

MM-USS-6(a): During the planning, design, and project-level CEQA review process for individual development projects, SCAG shall coordinate with waste management agencies and the appropriate local and regional jurisdictions to facilitate the development of measures and to encourage diversion of solid waste such as recycling and composting programs. This includes discouraging siting of new landfills unless all other waste reduction and prevention actions have been fully explored to minimize impacts to neighborhoods.

Project-Level Mitigation Measures

MM-USS-6(b): Consistent with the provisions of Section 15091 of the State CEQA Guidelines, SCAG has identified mitigation measures capable of avoiding or reducing the significant effects to serve landfills with sufficient permitted capacity to accommodate solid waste disposal needs, in which 75 percent of the waste stream be recycled and waste reduction goal by 50 percent that are within the responsibility of public agencies and/or Lead Agencies. Where the Lead Agency has identified that a project that has the potential for significant effects, the Lead Agency can and should consider mitigation measures to ensure compliance pursuant to the provisions of the Solid Waste Diversion Goals and Integrated Waste Management Plan. Such measures may include the following or other comparable measures identified by the Lead Agency:

- Integrate green building measures consistent with CALGreen (California Building Code Title 24) into project design including, but not limited to the following:
 - Reuse and minimization of construction and demolition (C&D) debris and diversion of C&D waste from landfills to recycling facilities.
 - Inclusion of a waste management plan that promotes maximum C&D diversion.
 - Source reduction through (1) use of materials that are more durable and easier to repair and maintain, (2) design to generate less scrap material through

- dimensional planning, (3) increased recycled content, (4) use of reclaimed materials, and (5) use of structural materials in a dual role as finish material (e.g., stained concrete flooring, unfinished ceilings, etc.).
- Reuse of existing structure and shell in renovation projects.
 - Design for deconstruction without compromising safety.
 - Design for flexibility through the use of moveable walls, raised floors, modular furniture, moveable task lighting and other reusable building components.
 - Development of indoor recycling program and space.
 - Discourage the siting of new landfills unless all other waste reduction and prevention actions have been fully explored. If landfill siting or expansion is necessary, site landfills with an adequate landfill-owned, undeveloped land buffer to minimize the potential adverse impacts of the landfill in neighboring communities.
 - Discourage exporting of locally generated waste outside of the SCAG region during the construction and implementation of a project. Encourage disposal within the county where the waste originates as much as possible. Promote green technologies for long-distance transport of waste (e.g., clean engines and clean locomotives or electric rail for waste-by-rail disposal systems) and consistency with SCAQMD and 2016 RTP/SCS policies can and should be required.
 - Encourage waste reduction goals and practices and look for opportunities for voluntary actions to exceed the 50 percent waste diversion target.
 - Encourage the development of local markets for waste prevention, reduction, and recycling practices by supporting recycled content and green procurement policies, as well as other waste prevention, reduction and recycling practices.
 - Develop ordinances that promote waste prevention and recycling activities such as: requiring waste prevention and recycling efforts at all large events and venues; implementing recycled content procurement programs; and developing opportunities to divert food waste away from landfills and toward food banks and composting facilities.
 - Develop alternative waste management strategies such as composting, recycling, and conversion technologies.
 - Develop and site composting, recycling, and conversion technology facilities that have minimum environmental and health impacts.
 - Require the reuse and recycle construction and demolition waste (including, but not limited to, soil, vegetation, concrete, lumber, metal, and cardboard).
 - Integrate reuse and recycling into residential industrial, institutional and commercial projects.
 - Provide recycling opportunities for residents, the public, and tenant businesses.
 - Provide education and publicity about reducing waste and available recycling services.
 - Continue to adopt programs to comply with state solid waste diversion rate mandates and, where possible, encourage further recycling to exceed these rates.
 - Implement or expand city or county-wide recycling and composting programs for residents and businesses. This could include extending the types of recycling services offered (e.g., to include food and green waste recycling) and providing public education and publicity about recycling services.

3.18.7 LEVEL OF SIGNIFICANCE AFTER MITIGATION

IMPACT USS-3: Require or result in construction of new storm water drainage facilities or expansion of existing facilities, the construction of which could cause significant environmental effects.

Implementation of Mitigation Measures MM-HYD-5(a) and MM-HYD-5(b) would reduce impacts to utilities and service systems in anticipated development; however, direct, indirect, and cumulative impacts would remain significant and unavoidable.

IMPACT USS-4: Have sufficient water supplies available to serve the project from existing entitlements and resources or will require new or expanded entitlements.

Implementation of Mitigation Measures MM-USS-4(a) and MM-USS-4(b) would reduce impacts to utilities and service systems in anticipated development; however, direct, indirect, and cumulative impacts would remain significant and unavoidable.

IMPACT USS-6: Be served by a landfill with sufficient permitted capacity to accommodate the project's solid waste disposal needs.

Implementation of Mitigation Measures MM-USS-6(a) and MM-USS-6(b) would reduce impacts to utilities and service systems in anticipated development; however, direct, indirect, and cumulative impacts would remain significant and unavoidable.

4.0 ALTERNATIVES

This section of the Program Environmental Impact Report (PEIR) describes alternatives to the proposed 2016 Regional Transportation Plan/Sustainable Communities Strategy (“2016 RTP/SCS,” “Plan,” or “Project”). Alternatives have been analyzed consistent with Section 15126.6 of the California Environmental Quality Act Guidelines (State CEQA Guidelines), which requires evaluation of a range of reasonable alternatives to the Project, or to the location of the Project, that would feasibly attain most of the basic objectives of the Project but would avoid or substantially lessen any of the significant effects of the Project, and evaluation of the comparative merits of the alternatives.

4.1 RATIONALE FOR ALTERNATIVES SELECTION

This section describes the ability of alternatives to meet, or partially meet, most of the basic objectives, and their ability to avoid or reduce the significant effects of the Project. The alternatives were developed to be substantially aligned with planning scenarios that were used to develop the 2016 RTP/SCS. Key provisions of the State CEQA Guidelines pertaining to the alternatives analysis are summarized below.¹

- The discussion of alternatives shall focus on alternatives to the project including alternative locations that are capable of avoiding or substantially lessening any significant effects of the project, even if these alternatives would impede to some degree the attainment of the project objectives, or would be more costly.
- The No Project Alternative shall be evaluated along with its potential impacts. The No Project Alternative analysis shall discuss the existing conditions at the time the notice of preparation is published, as well as what would reasonably be expected to occur in the foreseeable future if the project were not approved, based on current plans and consistent with available infrastructure and community services.
- The range of alternatives required in an EIR is governed by a “rule of reason.” Therefore, the EIR must evaluate only those alternatives necessary to permit a reasoned choice. The alternatives shall be limited to ones that would avoid or substantially lessen any of the significant effects of the proposed project.
- For alternative locations, only locations that would avoid or substantially lessen any of the significant effects of the project need be considered for inclusion in the EIR.
- An EIR need not consider an alternative whose effects cannot be reasonably ascertained and whose implementation is remote and speculative.

¹ CEQA Guidelines, California Code of Regulations (CCR), Title 14, Division 6, Chapter 3, § 15126.6, 2011.

4.2 RANGE OF REASONABLE ALTERNATIVES

The range of feasible alternatives is selected and discussed in a manner intended to foster meaningful public participation and informed decision making. Among the factors that may be taken into account when addressing the feasibility of alternatives (as described in State CEQA Guidelines Section 15126.6(f)(1)) are environmental impacts, site suitability, economic viability, availability of infrastructure, general plan consistency, regulatory limitations, jurisdictional boundaries, and whether the proponent could reasonably acquire, control, or otherwise have access to the alternative site.

An EIR must briefly describe the rationale for selection and rejection of alternatives. The lead agency may make an initial determination as to which alternatives are feasible, and, therefore, merit in-depth consideration.² Alternatives may be eliminated from detailed consideration in the EIR if they fail to meet project objectives, are infeasible, or do not avoid any significant environmental effects.³

Project Objectives

Consistent with the provisions of Section 15126.6(a) of the State CEQA Guidelines, the EIR must consider “alternatives ... which would feasibly attain most of the basic objectives of the project but would avoid or substantially lessen any of the significant effects of the project, and evaluate the comparative merits of the alternatives.” SCAG has established nine goals to serve as project objectives (see **Table 2.4.1-1, 2016 RTP/SCS Goals**, in *Section 2.0, Project Description*). In addition, while not specifically required under CEQA, other parameters may be used to further establish criteria for selecting alternatives such as adjustments to phasing, and other “fine-tuning” that could shape feasible alternatives in a manner that could result in reducing identified environmental impacts.

SCAG lacks the legal authority to require the elected decision makers of cities and counties to adopt or amend their respective land use policies, such as general plan and zoning code amendments that would be required to implement the land use patterns included in the SCS component of the Plan. Furthermore, SCAG lacks the legal authority to implement land use designations in the SCS component of the Plan or the alternatives. Nevertheless, pursuant to CEQA, the range of alternatives considered in the PEIR illustrates the different environmental consequences of potential alternatives to the Plan.

Limits of SCAG Authority

SCAG also does not have any legal jurisdiction to control population and employment levels in the region. The accuracy of growth projections at the regional scale, over both the short and long term, are inherently estimates that are subject to a wide variety of factors outside of the control of SCAG or any of its member counties and cities, such as the global recession. Accordingly, all alternatives assume the same forecasted regional growth in population and employment.

Estimating the environmental consequences of regional growth within the SCAG region is also subject to a wide variety of uncertainties that are outside of the control of SCAG, and for many topical areas are outside the control of SCAG’s member counties and cities.

² CEQA Guidelines, CCR, Title 14, Division 6, Chapter 3, §15126.6(f)(3), 2005.

³ CEQA Guidelines, CCR, Title 14, Division 6, Chapter 3, §15126.6(c), 2005.

4.3 ALTERNATIVES TO THE PROPOSED PROJECT

The alternatives were identified during the RTP/SCS scenario planning development process as having the potential to avoid significant effects of the Project. Section 15126.6(e) of the State CEQA Guidelines requires that a “No Project” Alternative must be evaluated. In addition to the No Project Alternative required to be considered pursuant to CEQA, this PEIR evaluates two other alternatives: (1) 2012 RTP/SCS Updated with Local Input Alternative and (2) Intensified Land Use Alternative (see **Table 4.3-1, Summary of Proposed Project and Alternatives**). Each of the three alternatives consists of a transportation network element and a land use pattern element, and is substantively aligned with the scenarios for developing the Plan.⁴ The No Project Alternatives is based on and aligned with the 2016 RTP/SCS Scenario 1 (“No Build/Baseline: No build network and trend SED”⁵). The 2012 RTP/SCS Updated with Local Input Alternative is based on and aligned with the 2016 RTP/SCS Scenario 2 (“Updated 2012 Plan/Local Input: Updated growth forecast”) of the Draft Scenario Planning Matrix. The Intensified Land Use Alternative is based on a combination of a transportation network of the 2016 RTP/SCS Scenario 3 and land use pattern of the 2016 RTP/SCS Scenario 4.

The alternatives are evaluated at a comparative level of detail, consistent with the provisions of Section 15126.6(d) of the State CEQA Guidelines (**Table 4.3-1**). Concentration of development to improve the transportation network and accommodated anticipated population growth are among the guiding principles for the 2016 RTP/SCS. Development of greenfields varies widely among the alternatives (**Table 4.3-1**). At 151 square miles, the No Project Alternative has the greatest anticipated conversion of greenfields, while Alternative 3: Intensified Land Use Alternative would reduce that development of greenfields to 90 square miles.

⁴ Southern California Association of Governments. Accessed 7 November 2015. *2016-2040 RTP/SCS Draft Scenario Planning Matrix*. Available at: <http://www.scag.ca.gov/committees/CommitteeDocLibrary/osw021915draftscenario.pdf>

⁵ SED is social-economic data.

TABLE 4.3-1
SUMMARY OF PROPOSED PROJECT AND ALTERNATIVES

Elements	Proposed Project: 2016 RTP/SCS	Alternative 1: No Project	2012 RTP/SCS Updated with Local Input Alternative	Alternative 3: Intensified Land Use Alternative
Greenfield Land Consumption	118 square miles	151 square miles	138 square miles	90 square miles
Highway Network	78,819 lane mile 1.9 billion capacity mile	71,710 lane mile 1.7 billion capacity mile	78,819 lane mile 1.9 billion capacity mile	78,819 lane mile 1.9 billion capacity mile
Transit Network (route mile)	15,130	13,943	14,421	15,130
Transit Boarding (daily)	4.5 million	3.4 million	4.1 million	4.6 million
Congestion (speed)	36.0 (AM Peak) 34.0 (PM Peak)	30.5 (AM Peak) 29.1 (PM Peak)	35.7 (AM Peak) 33.7 (PM Peak)	36.3 (AM Peak) 34.1 (PM Peak)
Vehicle Miles Traveled (VMT) ¹	503,803,907 (total) 22.79 (VMT per capita)	540,435,712 (total) 24.22 (VMT per capita)	510,300,297 (total) 23.07 (VMT per capita)	497,006,245 (total) 22.47 (VMT per capita)
Vehicle Hours Traveled (VHT) ¹	12,977	15,633	13,225	12,763
Vehicle Hours Delay ¹ (1,000 hours)	2,021 (total) 5.48 (Delay per capita)	3,741 (total) 10.15 (Delay per capita)	2,117 (total) 5.74 (Delay per capita)	1,954 (total) 5.30 (Delay per capita)
Active Transportation Strategies	12,700 miles local, regional and greenway networks; First mile/last mile strategy at and around 224 rail or fixed-guide way bus stations; 670 miles livable corridors; 880 stations and 8,800 bicycles for bike share services; 10,500 new or improved sidewalks; 50% of schools covered for Safe Routes to School (SRTS) programs and projects (approx. \$280 million)	7,042 mile local bikeway network; Remaining as, 755 greenways; 7,576 miles of bikeways repaired/constructed Limited First mile/last mile strategy; No Livable Corridors; SRTS not available	10,000 mile local bikeway network; 1,8000 mile greenways; Limited First mile/last mile strategy; No Livable Corridors; 40% of schools covered for SRTS programs and projects	Same as the Plan 12,702 Local, regional, and greenway network; 880 stations for bike share services; 670 miles of Livable Corridors; 50% of schools covered for SRTS programs and projects
Active Transportation (billions of dollars)	12.9	0.520	6.7	12.9
Land Use and Transit Coordination (HOTAs)	47% homes 56% employees	36% homes 44% employees	39% homes 48% employees	50% homes 60% employees
Land Pattern Focus	13% urban infill 49% compact walkable 38% standard suburban	3% urban infill 11% compact walkable 86% standard suburban	13% urban infill 32% compact walkable 55% standard suburban	13% urban infill 52% compact walkable 35% standard suburban
Land Consumption (greenfield)	118 square miles	154 square miles	138 square miles	90 square miles
Housing Mix	41% Multifamily 8% Townhome 19% Single Family (SF) small lot 32% SF large lot	36% Multifamily 7% Townhome 18% SF small lot 39% SF large lot	39% Multifamily 8% Townhome 18% SF small lot 36% SF large lot	41% Multifamily 8% Townhome 19% SF small lot 32% SF large lot
Cumulative Residential and Commercial Building Energy Consumed and Energy Costs	19,559 trillion Btu \$735 billion	20,306 trillion Btu \$762 billion	19,983 trillion Btu \$750 billion	19,356 trillion Btu \$728 billion
Cumulative Residential and Commercial Building Water Use and Water Costs	133,135,367 acre-feet \$186 billion	133,996,824 acre-feet \$186 billion	133,468,304 acre-feet \$185 billion	132,723,264 acre-feet \$184 billion
Per Household Total Cost (driving + utilities)	\$13,993	\$15,966	\$14,680	\$13,340

NOTE:
1. This includes light and medium-duty vehicles, and heavy-duty trucks.

Alternative 1: No Project Alternative

The No Project Alternative is required by Section 15126.6(e)(2) of the CEQA Guidelines and assumes that the Plan would not be implemented. The No Project Alternative allows decision makers to compare the impacts of approving the proposed project with the impacts of not approving the proposed project. The No Project Alternative evaluates “what would be reasonably expected to occur in the foreseeable future if the project were not approved, based on current plans and consistent with available infrastructure and community services” (CEQA Guidelines Section 15126.6(e)(2)).

For purposes of this document, the No Project Alternative is aligned with the 2016 RTP/SCS “Baseline” scenario (Scenario 1 in the Draft Scenario Planning Matrix⁶). The No Project Alternative includes those transportation projects that are in place at the time of preparation of the 2016 RTP/SCS and that are included in the first year of the previously conforming transportation plan and/or transportation improvement program (TIP), or have completed environmental review by December 2014. “Exempt projects” that include safety projects and certain mass transit projects, transportation control measures (“TCMs”) that are approved by the State Implementation Plan, and project phases that were authorized by the FHWA/FTA prior to expiration of SCAG’s conformity finding for the adopted 2012 RTP/SCS, would also be included in the No Project Alternative since they could move forward in the absence of an adopted 2016 RTP/SCS.⁷ These reasonably foreseeable projects fulfill the definition of the CEQA mandated “No Project Alternative.”

The land use strategies included in the No Project Alternative are based on the trending socioeconomic growth projection to the future (2040) using data from 1990 to the present, and updated with the same jurisdictional local input population, household and employment data as those in the 2016 RTP/SCS to reflect the most recent local input growth estimates in the region. This “trend baseline” is a “no build” scenario.

Alternative 2: 2012 RTP/SCS Updated with Local Input Alternative

For purposes of this document, the 2012 RTP/SCS Updated with Local Input Alternative is aligned with Scenario 2 in the Draft Scenario Planning Matrix.⁸ It retains transportation investments and land use strategies of the 2012 RTP/SCS, updated with the same local input incorporated in the 2016 RTP/SCS to reflect the most recent local input growth estimates in the region. This alternative does not include land use strategies included within the 2016 RTP/SCS, but includes all of the modifications and projects in the 2012 RTP/SCS through Amendment 2. This Alternative will consider continued implementation of the policies, strategies and projects included in the 2012 RTP/SCS.⁹

Alternative 3: Intensified Land Use Alternative

This Intensified Land Use Alternative is based on a transportation network for the 2016 RTP/SCS (Scenario 3 in the Draft Scenario Planning Matrix), plus more aggressive densities and land use patterns of Scenario 4 in the Draft Scenario Planning Matrix. This Alternative's transportation network is based off the Plan's network with minor changes to the goods movement and transit projects. The land use pattern in this Alternative build on the land use strategies as described in the 2016 RTP/SCS and beyond. Specifically, it increases densities and intensifies land use patterns of the Plan, especially around high-quality transit areas (HQTAs) in an effort to maximize transit opportunities. The growth pattern associated with this Alternative optimizes urban areas and suburban town centers, transit oriented developments (TODs), HQTAs, livable corridors, and neighborhood mobility areas. It also includes a greater progressive job-housing distribution optimized for TODs and infill in HQTAs. This Alternative considers the basis of the Project with enhancements to increase benefits related to the region's accelerated SB 375 GHG emissions reduction trend into 2040 and beyond, and related improvements for air quality, livability, public health, active transportation opportunities, Environmental Justice, and affordability benefits. This Alternative assumes enhanced benefits from technology over the 25-year planning horizon.

4.4 COMPARATIVE ANALYSIS OF IMPACTS

The effectiveness of each of the alternatives to achieve the basic objectives of the Plan has been evaluated in relation to the statement of vision, goals, guiding policies and performance measures described in **Section 2.0, Project Description** (see **Table 4.4-1, Summary of Adequacy of Proposed Project and Alternatives to Attain Project Goals**). The Project would meet all of the goals of the Plan (**Table 4.4-1**). Although the No Project Alternative is not capable of meeting most of the goals of the Project, it has been analyzed, as required by CEQA. Alternative 2, meets some but not all the project goals. Specifically, it is less effective than the Plan in meeting three goals:

- Protect the environment and health for our residents by improving air quality and encouraging active transportation (non-motorized transportation, such as bicycling and walking).
- Actively encourage and create incentives for energy efficiency, where possible.
- Encourage land use and growth patterns that facilitate transit and non-motorized transportation.

Alternative 3 is capable of meeting most of the goals of the Plan. Specifically, it is less effective in meeting two goals:

- Maximize mobility and accessibility for all people and goods in the region.
- Ensure travel safety and reliability for all people and goods in the region.

Consistent with the requirements of Section 15126.6(d) of the State CEQA Guidelines, this section of the analysis provides information for the alternatives, including the No Project Alternative, to allow meaningful evaluation, analysis, and comparison with the Project, inclusive of direct, indirect, and cumulative impacts (**Table 4.4-2, Summary of Impacts for Proposed Project and Alternatives**). The evaluation demonstrates if the alternative is able to avoid or reduce the significant and unavoidable effects of the Project.

TABLE 4.4-1
SUMMARY OF ADEQUACY OF PROPOSED PROJECT AND ALTERNATIVES TO ATTAIN PROJECT GOALS

Goals	Proposed Project: 2016 RTP/SCS	Alternative 1: No Project	Alternative 2: 2012 RTP/SCS Updated with Local Input Alternative	Alternative 3: Intensified Land Use Alternative
Align the Plan investments and policies with improving regional economic development and competitiveness	Yes	No	Yes	Yes
Maximize mobility and accessibility for all people and goods in the region	Yes	No	Yes	No
Ensure travel safety and reliability for all people and goods in the region	Yes	No	Yes	No
Preserve and ensure a sustainable regional transportation system	Yes	No	Yes	Yes
Maximize the productivity of our transportation system	Yes	No	Yes	Yes
Protect the environment and health for our residents by improving air quality and encouraging active transportation (non-motorized transportation, such as bicycling and walking)	Yes	No	No	Yes
Actively encourage and create incentives for energy efficiency, where possible	Yes	No	No	Yes
Encourage land use and growth patterns that facilitate transit and non-motorized transportation	Yes	No	No	Yes
Maximize the security of the regional transportation system through improved system monitoring, rapid recovery planning, and coordination with other security agencies.	Yes	No	Yes	Yes

Alter existing drainage pattern	Less than Significant after Mitigation	Greater (Less than Significant after Mitigation)	Similar (Less than Significant after Mitigation)	Similar (Less than Significant after Mitigation)
create or contribute to runoff water	Significant and Unavoidable	Greater (Significant and Unavoidable)	Greater (Significant and Unavoidable)	Less (Significant and Unavoidable)
Degrade water quality	Significant and Unavoidable	Greater (Significant and Unavoidable)	Greater (Significant and Unavoidable)	Less (Significant and Unavoidable)
Place housing in a 100-year flood plain	Significant and Unavoidable	Greater (Significant and Unavoidable)	Greater (Significant and Unavoidable)	Less (Significant and Unavoidable)
place structures in a 100-year flood hazard area	No Impact	Similar (No Impact)	Similar (No Impact)	Similar (No Impact)
Expose people or structures to loss and flooding from dam or levee failure	Significant and Unavoidable	Greater (Significant and Unavoidable)	Greater (Significant and Unavoidable)	Less (Significant and Unavoidable)
Inundation by seiche, tsunami, or mudflow	Significant and Unavoidable	Greater (Significant and Unavoidable)	Greater (Significant and Unavoidable)	Less (Significant and Unavoidable)
Land Use / Planning				
Conflict with an applicable land use plan, policy, or regulation	Significant and Unavoidable	Less (Significant and Unavoidable)	Similar (Significant and Unavoidable)	Greater (Significant and Unavoidable)
Physically divide an established community	Significant and Unavoidable	Less (Significant and Unavoidable)	Similar (Significant and Unavoidable)	Similar (Significant and Unavoidable)
Conflict with HCP or NCCP	Significant and Unavoidable	Greater (Significant and Unavoidable)	Greater (Significant and Unavoidable)	Less (Significant and Unavoidable)
Mineral Resources				
loss of availability of a known mineral resource	Significant and Unavoidable	Less (Significant and Unavoidable)	Similar (Significant and Unavoidable)	Similar (Significant and Unavoidable)
Result in the loss of availability of a locally important mineral resource	Significant and Unavoidable	Less (Significant and Unavoidable)	Similar (Significant and Unavoidable)	Similar (Significant and Unavoidable)
Noise				
Exposure to or generation of noise in excess of standards	Significant and Unavoidable	Less (Significant and Unavoidable)	Less (Significant and Unavoidable)	Greater (Significant and Unavoidable)

TABLE 4.4-2
SUMMARY OF IMPACTS FOR PROPOSED PROJECT AND ALTERNATIVES

Issue Area	Proposed Project: 2016 RTP/SCS	Alternative 1: No Project	Alternative 2: 2012 RTP/SCS Updated with Local Input Alternative	Alternative 3: Intensified Land Use Alternative
Ground borne vibration	Significant and Unavoidable	Less (Significant and Unavoidable)	Less (Significant and Unavoidable)	Greater (Significant and Unavoidable)
Increase in ambient noise levels	Significant and Unavoidable	Less (Significant and Unavoidable)	Less (Significant and Unavoidable)	Greater (Significant and Unavoidable)
Temporary or periodic increase in ambient noise levels	Significant and Unavoidable	Less (Significant and Unavoidable)	Less (Significant and Unavoidable)	Greater (Significant and Unavoidable)
Airport noise levels	Less than Significant	Less (Less than Significant)	Less (Less than Significant)	Greater (Less than Significant)
Private airstrip noise levels	Less than Significant	Less (Less than Significant)	Less (Less than Significant)	Greater (Less than Significant)
Population / Housing				
Induce population growth	Significant and Unavoidable	Similar (Significant and Unavoidable)	Similar (Significant and Unavoidable)	Similar (Significant and Unavoidable)
Displace existing housing	Significant and Unavoidable	Less (Significant and Unavoidable)	Similar (Significant and Unavoidable)	Greater (Significant and Unavoidable)
Displace people requiring construction of replacement housing	Significant and Unavoidable	Less (Significant and Unavoidable)	Similar (Significant and Unavoidable)	Greater (Significant and Unavoidable)
Public Services				
Require additional Fire Protection and Emergency Response Service facilities	Less than Significant after Mitigation	Similar (Less than Significant after Mitigation)	Similar (Less than Significant after Mitigation)	Similar (Less than Significant after Mitigation)
Require additional Public Protective Security Service facilities	Less than Significant after Mitigation	Similar (Less than Significant after Mitigation)	Similar (Less than Significant after Mitigation)	Similar (Less than Significant after Mitigation)
Require additional School service facilities	Less than Significant after Mitigation	Similar (Less than Significant after Mitigation)	Similar (Less than Significant after Mitigation)	Similar (Less than Significant after Mitigation)
Recreation				
Increase use of existing recreational facilities	Significant and Unavoidable	Somewhat Less (Significant and Unavoidable)	Somewhat Less (Significant and Unavoidable)	Greater in urban areas (Significant and Unavoidable)
Require expansion or construction of recreation facilities	Significant and Unavoidable	Similar (Significant and Unavoidable)	Less (Significant and Unavoidable)	Similar (Significant and Unavoidable)
Transportation, Traffic, and Safety				
Conflict with a plan, ordinance, or policy	Significant and Unavoidable	Greater (Significant and Unavoidable)	Greater (Significant and Unavoidable)	Greater (Significant and Unavoidable)
Conflict with a congestion management plan	Significant and Unavoidable	Greater (Significant and Unavoidable)	Greater (Significant and Unavoidable)	Greater (Significant and Unavoidable)
Change in air traffic patterns	Less than Significant	Greater (Less than Significant)	Greater (Less than Significant)	Less (Less than Significant)
Increase hazards due to design features	Less than Significant	Greater (Less than Significant)	Greater (Less than Significant)	Greater (Less than Significant)
Inadequate emergency access	Less than Significant with Mitigation	Greater (Less than Significant with Mitigation)	Greater (Less than Significant with Mitigation)	Greater (Less than Significant with Mitigation)
Conflict with policies, plans, or programs regarding public transit, bicycle, or pedestrian facilities	Less than Significant	Greater (Less than Significant)	Greater (Less than Significant)	Less (Less than Significant)

TABLE 4.4-2
SUMMARY OF IMPACTS FOR PROPOSED PROJECT AND ALTERNATIVES

Issue Area	Proposed Project: 2016 RTP/SCS	Alternative 1: No Project	Alternative 2: 2012 RTP/SCS Updated with Local Input Alternative	Alternative 3: Intensified Land Use Alternative
Utilities / Service Systems				
Exceed RWQCB wastewater treatment requirements	Less than Significant	Greater (Less than Significant)	Greater (Less than Significant)	Less (Significant and Unavoidable)
Construction of new water or wastewater treatment facilities	Less than Significant	Greater (Less than Significant)	Greater (Less than Significant)	Greater (Significant and Unavoidable)
Construction of new or expansion of existing stormwater drainage facilities	Significant and Unavoidable	Greater (Significant and Unavoidable)	Greater (Significant and Unavoidable)	Less (Significant and Unavoidable)
Water supply	Significant and Unavoidable	Greater (Significant and Unavoidable)	Greater (Significant and Unavoidable)	Less (Significant and Unavoidable)
Determination by wastewater treatment provider of inadequate capacity	Less than Significant	Greater (Less than Significant)	Greater (Less than Significant)	Less (Less than Significant)
Landfill capacity and solid waste	Significant and Unavoidable	Greater (Significant and Unavoidable)	Greater (Significant and Unavoidable)	Less (Significant and Unavoidable)
Noncompliance with federal, state, and local statutes and regulations related to solid waste	Less than Significant	Greater (Less than Significant)	Greater (Less than Significant)	Less (Significant and Unavoidable)

Alternative 1: No Project Alternative

Aesthetics

The No Project Alternative would result in less impacts to scenic vistas, scenic highways, and shade and shadow, and greater impacts to visual character and light and glare. With the exception of exempt projects, the No Project Alternative would result in fewer transportation projects than the Plan and would have a lesser impact in terms of obstructing views and scenic resources, creating contrasting visual elements and adding visual elements to existing natural, rural and open space areas. The No Project Alternative would not affect any State Scenic Highways or vista points.

The No Project Alternative is expected to accommodate the same increase in total population, households, and jobs as the Plan. However, the Plan includes strategies to focus growth in HQTAs, which would help reduce the consumption and disturbance of natural lands and reduce impacts to aesthetics and views. Under the No Project Alternative, these land use strategies may not occur—although individual jurisdictions may still seek to reduce the urban footprint through their general plans. The Plan also includes transportation improvements that facilitate access to undeveloped lands, making those lands more attractive for development than under the No Project Alternative. However, the Plan includes policies to dissuade such encroachment on open space and vacant lands and is anticipated to result in far fewer impacts.

The No Project Alternative's impacts to visual character would be greater than the Plan impacts because of the increased consumption of greenfield land (151 square miles, as opposed to 118 square miles under the Plan) that would result in loss of scenic resources and changes in visual character. As shade/shadow and glare impacts typically occur in urban areas, these impacts would be reduced under the No Project Alternative.

In addition, the No Project Alternative would result in greater light and glare impacts as many of the transportation projects would occur in areas that are currently undeveloped or underdeveloped and would introduce new sources of light and materials that cause glare.

Agriculture and Forestry Resources

The No Project Alternative would result in somewhat greater impacts to agriculture and forestry resources when compared with the Plan, with similar impacts in regard to the loss or conversion of forest land. The No Project Alternative would not include transportation and land use strategies that focus growth along existing corridors and in urbanized areas, nor would it encourage additional greenways. As a result, development would be more scattered throughout the region when compared to the Plan, and conversion of farmland and agricultural areas would increase, as would the potential for conflicts with zoning for agricultural uses, or a Williamson Act contract. The Plan includes transportation and land use strategies that focus growth along existing corridors and in urbanized areas, rather than allowing development of vacant, open space/recreation, and agricultural lands. This compact development pattern included in the Plan would concentrate population in urban areas. Without the Plan development pattern, impacts to agricultural resources would be more widespread throughout the region. Approximately 3.89 million people are expected to move into the SCAG region by 2040. This population growth is the same across all alternatives and the Plan. The type of construction associated with housing the increase would be influenced by the Plan and alternatives. Examination of the Trend

Baseline for the No Project Alternative indicates that there would likely be more construction of large lot single-family homes (39 percent as opposed to 32 percent for the Plan), concurrently with a fewer number of multifamily home construction (36 percent as opposed to 41 percent for the Plan) (Table 4.3-1). Impacts to agricultural resources are directly linked to the amount of agricultural land conversion in non-urban areas. Single-family homes will require more acreage to accommodate the influx of people into the SCAG region than multi-family homes, and will therefore result in additional conversion of agricultural lands and greater impacts to agriculture and forestry resources.

Air Quality

Under the No Project Alternative, no new transportation investments would be made, beyond those that are currently programmed. As a result, fewer transportation projects would be built than under the Plan resulting in less construction emissions. However, construction emissions would still likely exceed the significance thresholds established in the CEQA Guidelines. Similar to the Plan, construction emissions would result in a significant short-term impact. Projected long-term emissions are considered to be cumulatively significant if they are not consistent with the local air quality management plans and state implementation plans. Unlike the Plan, the No Project Alternative may not conform to the local air quality management plans and could have a significant cumulative impact.

In the long term, Alternative 1 would have a similar impact to the local AQMPs and a reduced cumulative impact since development projects would be more efficient by design. As with the Plan, Alternative 1 achieves order of magnitude reductions in cancer risk levels associated with diesel particulate matter. As with the Plan, Cancer Risk for Alternative 1 remain above the acceptable standard of 1, established by U.S. Environmental Protection Agency. With respect to cancer risk and impact to public health for the No Project Alternative would be greater compared to the Plan due to the increase in VMT (Table 4.4-3, *Plan Compared to Alternative 1: Summary of Maximum Exposed Individuals Residential 30-Year Exposure Cancer Risk*). Three of the sixteen segments analyzed for Alternative 1 reduce Cancer Risk, beyond the reductions achieved by the Plan. However, for thirteen of the segments analyzed, result in increased Cancer Risk. The Cancer Risk in Segment 1, 2, 3, 5, 6, 11, 12, and 14 is substantially higher for Alternative 1 than the Plan; therefore, the sensitive receptors in these areas would be expected to result in exposure to greater health risk than the Plan .

SOURCE:

Health Risk Assessment (Appendix D).

NOTE:

Cancer Risk Threshold is 10 per 1 million.

Objectionable odors are expected to be similar as well since construction impacts will be similar to the Plan. Objectionable odors are expected to be similar to the Plan since there would be fewer construction projects causing these odors but also higher VMT, causing more diesel emission odors.

Biological Resources

The No Project Alternative would result in somewhat greater impacts to biological resources when compared with the implementation of the Plan. Conversion of open space to development would be more dispersed as there would be 10 percent more standard residential and 11 percent less housing in HQTAs resulting in an additional 36 square miles of greenfield land to be converted (Table 4.3-1). As such, more sensitive biological resources would be expected to be affected under the No Project Alternative.¹⁰ The No Project Alternative would not include transportation and land use strategies that focus growth along existing corridors and in urbanized areas, nor would it encourage additional greenways. As a result, development would be more scattered throughout the region when compared to the Plan, and native habitat conversion and fragmentation would increase. The Plan includes transportation and land use strategies that focus growth along existing corridors and in urbanized areas, rather than allowing development of vacant, open space/recreation, and agricultural lands. This

¹⁰ SCAG modeling, 2015.

compact development pattern included in the Plan would concentrate population in urban areas. Without the Plan development pattern, impacts to biological resources would be more widespread throughout the region. Approximately 3.89 million people are expected to move into the SCAG region by 2035. The type of construction associated with housing the increase would be influenced by the Plan and alternatives. Examination of the Trend Baseline for the No Project Alternative indicates that there would likely be more construction of large lot single-family homes (39 percent as opposed to 32 percent for the Plan), concurrently with a fewer number of multifamily home construction (36 percent as opposed to 41 percent for the Plan) (Table 4.3-1). Additionally land use patterns would shift from 4 percent urban in the Plan to 2 percent urban in the No Project Alternative.¹¹ Impacts to biological resources are directly linked to the amount of native habitat conversion in non-urban areas. Single-family homes will require more acreage to accommodate the influx of people into the SCAG region than multi-family homes, and will therefore result in additional conversion in natural habitats and greater impacts to biological resources.

Cultural Resources

The No Project Alternative would result in greater impacts in regards to cultural resources when compared with the implementation of the Plan. Approximately 3.89 million people are expected to move into the SCAG region by 2040. The type of construction associated with housing the increase would be influenced by the Plan and alternatives. Examination of the Trend Baseline for the No Project Alternative indicates that there would be more construction of large lot single-family homes concurrently with a much lower emphasis on multifamily home construction. Impacts to cultural resources are directly linked to the amount of ground disturbance a potential project proposes. Single-family homes will require more acreage to accommodate the influx of people into the SCAG region than multi-family, and will therefore result in additional ground disturbance and greater impacts to cultural resources. In addition, under the No Project Alternative, conversion of open space to development would be more dispersed as there would be 10 percent more standard residential and 11 percent less housing in HQTAs resulting in an additional 36 square miles of greenfield land to be consumed (Table 4.3-1). Development of vacant land may result in the disturbance of previously undiscovered archaeological, paleontological, or human remains. Moreover, the Plan's greater focus on urban areas could result in greater impacts to historical buildings, although many jurisdictions have policies and ordinances in place to protect historic resources.

Energy

The No Project Alternative would result in greater impacts to energy across all categories as compared to the Plan. The No Project Alternative contains fewer transportation projects than the Plan, but would result in greater VMT as growth is not focused on HQTAs (Table 4.3-1). Therefore, the No Project Alternative will result in greater transportation fuel consumption. The No Project Alternative also includes a large proportion of standard development, leading to a higher proportion of larger single-family homes, which are typically less energy-efficient.

At 20,306 trillion Btu and \$762 billion, Alternative 1 would result in similar but somewhat higher consumptive energy use and estimated cost of energy use than the Plan.

¹¹ SCAG modeling, 2015.

Geology and Soils

Implementation of the 2016 RTP/SCS would result in a greater amount of transportation projects and would increase the amount of transportation infrastructure that would be subject to risk as a result of surface rupture, ground-shaking liquefaction, landslides, and other risks associated with seismic events. Impacts related to geologic and seismic resources would be similar to the Plan under the No Project Alternative because the population would be the same and entire region is subject to seismic risk. The No Project Alternative would result in similar impacts to the Plan as anticipated population growth would remain constant over all of the alternatives and the Project, and the entire region is subject to seismic risk. The No Project Alternative contains fewer transportation projects than the Plan, but new development would still occur as a result of population growth with a larger proportion of single-family homes and a more dispersed development pattern.

The No Project Alternative would result in similar impacts as the Plan with regard to the exposure of people or structures to potential substantial adverse effects, including the risk of loss, injury, or death involving rupture of a known earthquake fault, as delineated on the most recent Alquist-Priolo Earthquake Fault Zoning Map issued by the State Geologist for the area or based on other substantial evidence of a known fault, Strong seismic ground shaking, seismic-related ground failure, including liquefaction, and landslides due to anticipated population growth, remaining constant over all of the alternatives, and the entire region's seismic risk.

The No Project Alternative would result in less impacts than the Plan with regard to substantial soil erosion or the loss of topsoil due to there being fewer transportation projects than the Plan.

The No Project Alternative would result in less impacts than the Plan with regard to being located on a geologic unit or soil that is unstable, or that would become unstable as a result of the project, and potentially result in on- or off-site landslide, lateral spreading, subsidence, liquefaction, or collapse due to there being fewer transportation projects than the Plan.

The No Project Alternative would result in less impact than the Plan with regard to being located on expansive soil, as defined in Table 18-1-B of the Uniform Building Code (1994), creating substantial risks to life or property due to the No Project Alternative having fewer transportation projects than the Plan.

Greenhouse Gas Emissions and Climate Change

The greenhouse gas (GHG) emissions for building energy and water-related energy (58.1 million metric tons CO_{2e} [MMTCO_{2e}]) would be greater with the No Project Alternative compared to the Plan (54.8 MMTCO_{2e}) (Table 4.3-1). For transportation, the GHG emissions with No Project Alternative (197,241 tons of CO₂ per day) are also greater compared to the Plan (185,519 tons of CO₂ per day). The Plan would improve regional GHG emissions compared to the No Project Alternative.

Unlike the Plan, the No Project Alternative would not achieve SB 375 targets due to the inability to complete the transportation investments and increase density of development in HQTAs that were identified in the 2012 RTP/SCS that are required to achieve the GHG emission reductions made possible by the Plan. Because SCAG has no control over many future emissions factors (e.g., energy and water demand), SCAG made extremely conservative assumptions regarding these factors.

Senate Bill (SB) 375 requires CARB to develop regional CO₂ emission reduction targets, compared to 2005 emissions, for cars and light trucks only for 2020 and 2035 for each of the state's MPOs. Significantly, where SCAG has control over transportation network improvements and growth distribution as part of its Plan, it is able to meet the SB 375 target with the SCS. According to **Table 3.8.4-3, SB 375 Analysis**, in **Section 3.8, Greenhouse Gas Emissions and Climate Change**, regional per capita GHG emissions would decrease under the No Project Alternative compared to the 2005 baseline, but would not achieve the 8 percent target set for 2020. As a result, the No Project Alternative would not achieve the SB 375 emissions targets (as compared to the Plan which would meet the targets).

Hazards and Hazardous Materials

The No Project Alternative would result in greater impacts from hazardous materials when compared with the 2016 RTP/SCS. The transportation system improvements incorporated in the 2016 RTP/SCS, vehicle miles traveled (VMT) and vehicle hours of delay (VHD) would increase more by 2040 for the No Project Alternative than for the project (**Table 4.3-1**). Thus, there would be more opportunities for accidents with vehicles transporting hazardous materials in the No Project Alternative than in the Plan. Also, with fewer new roadways constructed, hazardous materials transport would be concentrated on existing routes, and could not be diverted to dedicated lanes or grade-separated from automobile traffic. Construction related to improvements and other projects in the 2016 RTP/SCS could involve construction on or adjacent to a greater number of potentially contaminated sites than under the No Project Alternative. In addition, the Plan assumes the implementation of land use strategies that would encourage greater property reuse and more infill development than under the No Project Alternative. Thus, it is more likely that previously contaminated sites would be encountered under the Plan than the No Project Alternative.

With the construction of fewer new lane miles and other transportation projects in the No Project Alternative compared to the Plan, more transportation demand could be transferred to surrounding counties, and therefore, more hazardous materials transportation could potentially be facilitated in those counties. The No Project Alternative could have fewer adverse cumulative hazardous materials impacts than the Plan.

Hydrology and Water Quality

The No Project Alternative would result in greater impacts from hydrology and water quality when compared with the 2016 RTP/SCS. Under the No Project Alternative, fewer areas would be impacted by excavation and construction activities related to transportation projects as compared to the 2016 RTP/SCS. While the No Project Alternative would reduce the number of transportation projects built in the SCAG region, it would result in greater vacant land consumption that would, in turn, increase the amount of impervious surfaces and increase impacts to water resources. Therefore, the No Project Alternative impacts to water resources would be greater than the impacts from the 2016 RTP/SCS.

Additionally, because the No Project Alternative would consume greater amounts of vacant land and result in a more spread out growth pattern which would result in the development of land, the No Project Alternative's cumulative impacts to water resources would be greater than those of the 2016 RTP/SCS.

With fewer transportation projects than the 2016 RTP/SCS, the direct effects of the No Project Alternative on water resources would be reduced when compared with the 2016 RTP/SCS. As the currently planned projects included in the No Project alternative are built, the impacts resulting from increased roadway runoff and drainage patterns would remain significant. Likewise, the impacts to groundwater infiltration caused by the increased impervious surfaces of roadway projects, and to increased flooding hazards, would remain significant. While the Plan and the No Project Alternative would result in the same total population, the more dispersed growth pattern under the No Project Alternative would result in less efficient use of water (more single-family homes with landscaping) and therefore would result in a greater per capita use of water. As the Plan's more compact growth pattern would be more water efficient, the Plan's water supply impacts would be less than the No Project.

Similar to water supply, wastewater could be increased through the less efficient land use patterns. More new development would be located in areas that are not served by existing infrastructure which could result in additional impacts. The impacts to water quality would be greater under the No Project Alternative as the projected urbanized acreage under the No Project Alternative would be greater compared to the Plan. Due to a more dispersed growth pattern, the No Project Alternative's impacts to both water quality and flood risk would be greater than those associated with the 2016 RTP/SCS. Flooding impacts would generally be site specific although with greater consumption of vacant land, the No Project Alternative has a greater risk of locating RTP projects and/or development in flood prone areas. Overall, it is anticipated that the Plan would result in fewer impacts to water resources because of a compact growth pattern that would result in less impervious surfaces and less demand for water.

Cumulatively, both the 2016 RTP/SCS and the No Project Alternative would impact water quality, groundwater recharge, flood hazards, and water supply. The No Project Alternative would accommodate the same increase in population as projected for the Plan but in a more dispersed pattern. To reduce land consumption, the Plan includes land use measures that encourage development targeted in HQTAs. These measures are largely absent in the No Project alternative. As discussed above, the larger lot development associated with the No Project Alternative would result in greater demands on water supply. This increase in water consumption would pull additional water from imported sources, thereby limiting water available for other parts of the state. Therefore, the No Project Alternative would result in greater cumulative impacts to water supply than the Plan.

Impacts to water quality would be greater under the No Project Alternative as increased impervious surface (which contributes to water quality impacts) would be greater under the No Project Alternative. This would result in greater impacts to water quality and could affect water in areas outside the SCAG region. Therefore, cumulative water quality impacts would be greater under the No Project Alternative than the 2016 RTP/SCS alternative.

Land Use and Planning

Under the No Project Alternative, no new transportation investments would be made, beyond those that are currently programmed. As a result, fewer transportation projects would be built than under the Plan and new growth would occur consistent with local general plans. As a result, there would be less potential for there to be conflicts with applicable plans, policies, and regulations. The No Project Alternative does not include any land use strategies and would result in less transportation projects being constructed than the Plan.

The 2016 RTP/SCS, No Project Alternative would result in less impacts with regard to conflicts with any applicable land use plan, policy, or regulation of an agency with jurisdiction over the project (including, but not limited to the general plan, specific plan, local coastal program, or zoning ordinance) adopted for the purpose of avoiding or mitigating an environmental effect due to there being fewer transportation projects being programmed and no land use strategies to direct future growth into HQTAs and increase density.

The No Project Alternative would result in less impacts with regard to physically dividing an established community due to there being fewer transportation projects being programmed and no land use strategies to direct future growth into high-quality transit areas and increase density.

The No Project Alternative would result in greater impacts with regard to conflicting with an HCP or NCCP. The No Project Alternative would not include transportation and land use strategies that focus growth along existing corridors and in urbanized areas; nor would it encourage additional greenways. As a result, development would be more scattered throughout the region when compared to the Plan, and native habitat conversion and fragmentation would increase. The Plan includes transportation and land use strategies that focus growth along existing corridors and in urbanized areas, rather than allowing development of vacant, open space/recreation, and agricultural lands. This compact development pattern included in the Plan would concentrate population in urban areas. Without the Plan development pattern, impacts to biological resources would be more widespread throughout the region and the likelihood of conflicts with an existing HCP or NCCP would be greater.

Mineral Resources

The No Project Alternative would result in less impacts to mineral resources than the Plan. Less transportation projects would be constructed requiring less aggregate resources for construction of the transportation network. However, the No Project Alternative includes transportation projects likely to be implemented if the Plan were not adopted and population growth, and subsequent related development would still occur requiring limited aggregate resources for construction.

The No Project Alternative would result in the loss of availability of a known mineral resource that would be of value to the region and the residents of the state due to significant impacts from transportation projects likely to be implemented if the Plan were not adopted and population growth, and subsequent related development would still occur requiring limited aggregate resources for construction.

The No Project Alternative would result in the loss of availability of a locally important mineral resource recovery site delineated on a local general plan, specific plan, or other land use plan due to significant impacts from transportation projects likely to be implemented if the Plan were not adopted and population growth, and subsequent related development would still occur requiring limited aggregate resources for construction.

Noise

The No Project Alternative would result in reduced impacts from noise when compared with the 2016 RTP/SCS. Under the No Project Alternative, no new transportation investments would be made, beyond those that are currently programmed. Therefore, the No Project Alternative would not include transportation and land use strategies that focus growth along existing corridors and in urbanized areas,

would not result in construction or operation of new transportation infrastructure, and would not develop new HQTAs. As a result, fewer transportation projects would be built than under the 2016 RTP/SCS, resulting in less construction noise. However, construction noise would still exceed the significance thresholds established in the CEQA Guidelines. Development would be more scattered throughout the region when compared to the 2016 RTP/SCS, which concentrates population in urban areas to increase transportation efficiency. Therefore, operational noise would likely be reduced when compared to the 2016 RTP/SCS since transportation-related activities would be more dispersed throughout the region rather than focused on HQTAs. However, operational noise would still likely exceed the significance thresholds established in the CEQA Guidelines.

The No Project Alternative would result in less impacts from the exposure of persons to or generation of noise levels in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies due to significant impacts from temporary construction noise and permanent operational noise.

The No Project Alternative would result in less impacts from the exposure of persons to or generation of excessive groundborne vibration or groundborne noise levels due to significant impacts from temporary construction vibration and permanent operational vibration from heavy trucks and trains.

The No Project Alternative would result in less impacts from the substantial permanent increase in ambient noise levels in the project vicinity above levels existing without the project due to the significant impacts from permanent operational noise.

The No Project Alternative would result in less impacts from the substantial permanent increase in ambient noise levels in the project vicinity above levels existing without the project due to the significant impacts from permanent operational noise.

The No Project Alternative would result in less impacts from the substantial temporary or periodic increase in ambient noise levels in the project vicinity above levels existing without the project due to significant impacts from temporary construction noise.

The No Project Alternative would result in less than significant impacts for projects located within an airport land use plan or, where such a plan has not been adopted, within 2 miles of a public airport or public use airport, that result in the exposure of people residing or working in the project area to excessive noise levels.

The No Project Alternative would result in less than significant impacts for projects within the vicinity of a private airstrip that result in the exposure of people residing or working in the project area to excessive noise levels.

Population and Housing

The No Project Alternative is expected to accommodate the same increase in total population, housing, and employment as the Plan. Therefore, the No Project Alternative would result in the same population growth impacts as the Plan. Under the No Project Alternative, no new transportation investments would be made, beyond those that are currently programmed. As a result, fewer transportation projects would be built than under the Plan. However, the same population growth will still occur for

Plan, the No Project Alternative, and the remaining two alternatives. With regard to population displacement and the need to construct replacement housing, the No Project Alternative would result in less impacts as no new transportation investments would be made, beyond those that are currently programmed resulting in less likelihood that transportation projects will result in the displacement of people and the need to construct replacement housing.

The No Project Alternative would result in similar impacts as the Plan with regard to the Inducement of substantial population growth in an area, either directly or indirectly due to all alternatives accommodating the same increase in total population growth.

The No Project Alternative would result in less impacts as the Plan with regard to the displacement of substantial amounts of existing housing, necessitating the construction of replacement housing elsewhere due to there being fewer transportation projects.

The No Project Alternative would result in less impacts than the Plan with regard to the displacement of substantial numbers of people, necessitating the construction of replacement housing elsewhere due to there being fewer transportation projects.

Public Services

The No Project Alternative would result in similar impacts to the Plan with regard to requiring additional fire protection and emergency response service facilities, and additional public protective security service facilities. Although the number of transportation improvement projects would be less, there would still be a need for new public services as a result of population growth. Population growth would remain constant over all of the alternatives and the No-Project, would result in a similar need for fire protection and emergency response service facilities, and additional public protective security service facilities, but the congestion that would result from a lack of additional transportation improvements and a more dispersed population distribution would result in delayed emergency vehicle response times that would require the provision of additional fire protection and emergency response facilities as well as public protective security service facilities to provide adequate service levels. In particular, additional fire protection facilities would be necessary than under the Plan in order to meet emergency response time standards, which range from 5 minutes in urban areas to 12 minutes in more rural areas.. Police protection standards are based on sworn officers per 1,000 persons. As a result, the same population growth for the SCAG region over all alternatives would mean that same number of sworn officers would be required. With regard to the need for additional schools, impacts would be similar to the Plan as a more dispersed land pattern would result in more need for additional school facilities in rural areas but less need for additional school facilities than in the areas targeted for increased population densities, such as TOD areas, HQTAs, and urban infill areas under the Plan.

Recreation

Under the No Project Alternative, there would be the same population growth that is anticipated for the Plan. With no concentration of growth, the park usage would be more disperse in urban and suburban areas, resulting in less accelerated deterioration of urban park facilities and fewer communities with planned high-density growth that would not be able to meet Quimby Act targets for parks than under the Plan. Therefore, there would be less but still significant impacts to the increase use of existing recreational facilities due to the population growth. Considering the same population growth and less

density in this alternative, there would be a reduced need for expansion or construction of recreation facilities since the use is more dispersed. This would result in similar impacts to expansion or construction of recreation facilities, as the reduced need for parks would also be associated with construction of recreational facilities in less urban areas where there is a greater potential for adverse physical effects on the environment to occur.

Transportation, Traffic, and Safety

The No Project Alternative would result in more impact to transportation, traffic, and safety when compared to without implementation of the Plan. The relationship between the VMT in 2040 with implementation of the Plan and without implementation of the Plan is shown in **Table 3.17.4-1, *Daily Vehicle Miles Traveled in 2015 and 2040***, in **Section 3.17, *Transportation, Traffic, and Safety***. The No Project Alternative would not include transportation and land use strategies that focus growth along existing corridors and in urbanized areas. Nor would the No Project Alternative encourage additional greenways, First and Last Mile strategies, Livable Corridors, increase HQTAs and Limited Safe Routes to School (SRTS). As a result, population would be more scattered throughout the region when compared to the Plan, and per capita VMT and overall efficiency of the system would not be reduced and other transportation metrics would not be improved. The No Project Alternative would generally be expected to result in more miles traveled, more hours traveled and more delay. In 2040, the No Project Alternative would result in 24.44 VMT per capita, 15,633 vehicle hours traveled (VHT) and 10.15 vehicle hours of delay in thousands of hours (VHD) per capita (**Table 4.3-1**). Implementation of the Plan would reduce vehicle miles traveled by approximately 7 percent to 22.78 VMT per capita, reduce VHT by 17 percent to 12,977 VHT, and reduce VHD by 46 percent to 5.48 VHD per capita. The relationships between the percent of work opportunities within 45 minutes travel time with implementation of the Plan and without implementation of the Plan are shown in **Table 3.17.4-4, *Percentage of PM Peak Period Work Trips Complete within 45 Minutes***. Implementation of the No Project Alternative would decrease the work opportunities within 45 minutes travel time by single occupancy vehicle in 2040 as compared to the Plan from 89.1 percent to 82.4 percent, would decrease the work opportunities within 45 minutes travel time by transit from 23 to 20 percent. Passenger vehicle fuel use would reduce from 161.4 billion gallons to 138.1 billion gallons comparing No Project to the Plan. Additionally, the No Project Alternative has a much weaker land use and transit coordination in HQTAs (36% homes and 44% jobs) than that for the Plan (47% homes and 56% jobs) (**Table 4.3-1**).

Furthermore, the Plan would result in a system-wide daily fatality rate of 0.17 fatalities per million persons for all travel modes, a decrease of 0.01 daily fatalities per million persons when compared to the No Project Alternative. Lastly, implementation of the Plan would result in a system-wide daily injury rate of 12.93 injuries per million persons for all travel modes, a decrease of 0.74 daily injuries per million persons when compared to the No Project Alternative rate of 13.67¹².

The Plan includes transportation and land use strategies that focus growth along existing corridors and in urbanized areas, rather than allowing development of vacant, open space/recreation and agricultural lands. This compact pattern of development is complemented by Active Transportation Strategies that encourages development of walking and biking infrastructure, and supportive first mile/last mile strategies. This compact development pattern included in the Plan would concentrate population in

¹² SCAG modeling, 2015.

urban areas and encourage alternative modes of travel other than automobiles. Without the Planned development patterns, vehicles miles travels, vehicle hours of delay, worker commute trips, and accident rates would be higher than under the Plan.

Utilities and Service Systems

The No Project Alternative would result in greater impacts related to utilities as compared to the 2016 RTP/SCS. Contrary to the Plan, there would be less compact development under Alternative 1. With a less compact development pattern, the need for solid waste disposal facilities for construction related material would be greater under the No Project Alternative than the 2016 RTP/SCS. The need for new or expanded wastewater treatment facilities and stormwater drainage facilities to accommodate the less compact development patterns would be greater under the No Project Alternative than under the 2016 RTP/SCS. There would be a greater extension of solid waste transport and disposal infrastructure under the No Project Alternative. At 133,996,824 acre-feet comparing to 133,135,367 acre-feet under the Plan, Alternative 1 would result in similar consumptive water use and estimated cost of water to the Plan.

Alternative 2: 2012 RTP/SCS Updated with Local Input Alternative

Aesthetics

Alternative 2 would result in greater impacts to visual character and light and glare, similar impacts to scenic vistas and scenic highways, and less impacts to shade and shadow than the Plan. Conversion of greenfield to development would be more dispersed as there would be more standard suburban residential and less compact walkable land use and homes in HQTAs, resulting in an additional 20 square miles of greenfield land to be consumed (see **Table 4.3-1** and **Table 4.4-1**). Alternative 2 would not have a direct impact on the scenic highways because of the dispersion of population growth. Therefore, there would be a similar impact as the Plan to scenic highways. Because population growth would be less concentrated in existing open areas than the 2016 RTP/SCS, there would be greater overall impacts to visual character and quality than the Plan, and greater nighttime lighting impacts would occur in undeveloped areas, yet fewer shadow-sensitive uses, such as homes, near grade separation projects as the projects are more dispersed. Therefore, shade/shadow under Alternative 2 would have less but still significant and unavoidable impacts compared to the Plan.

Agriculture and Forestry Resources

Alternative 2 would result in somewhat greater impacts to agriculture and forestry resources when compared with the Plan. Alternative would include transportation and land use strategies that focus growth along existing corridors and in urbanized areas. However, the focused growth land use strategies would be at a lesser degree than the Plan. As a result, development would be more scattered thought the region when compared to the Plan, and conversion of farmland and agricultural areas would increase, as would the potential for there to be conflicts with zoning for agricultural uses, or a Williamson Act contract. The Plan includes transportation and land use strategies that focus growth along existing corridors and in urbanized areas, discouraging development of vacant natural lands, open space, and agricultural lands. This compact development pattern included in the Plan would concentrate population in urban areas. Without the Plan development pattern, impacts to agricultural resources would be more widespread throughout the region. Approximately 3.89 million people are

expected to move into the SCAG region by 2040. This population growth is the same across all alternatives and the Plan. The type of construction associated with housing the increase would be influenced by the Plan and alternatives.

While Alternative 2 includes the most recent jurisdictional-level local input-based growth forecast (same as that included in the Plan) and captures the HQTAs strategies in the 2016 RTP/SCS, this Alternative has a slightly less aggressive land use pattern compared to the Project. Alternative 2 encourages a land use pattern and housing mix that is slightly less compact (39 percent homes and 48 percent jobs in HTQAs) than the Plan (47 percent and 56 percent, respectively) and includes more construction of large lot single-family homes (36 percent or 4 percent more as opposed to 32 percent for the Plan), concurrently with fewer construction of multifamily home (2 percent less from 41 percent for the Plan to 39 percent for Alternative 2) (Table 4.3-1). Impacts to agricultural resources are directly linked to the amount of agricultural land conversion in non-urban areas. Neither the Plan nor this Alternative are expected to result in the loss of forest land or the conversion of forest land to no-forest use. Single-family homes, especially large lot single-family homes, will require more acreage to accommodate the influx of people into the SCAG region than multi-family homes, and will therefore result in additional conversion of agricultural lands and greater impacts to agriculture and forestry resources.

Air Quality

Alternative 2 would have the same population, housing, and employment as the Plan, but in a less dense fashion. Similar to the No Project Alternative, construction emissions would still likely exceed the significance thresholds established in the CEQA Guidelines and result in a significant short-term impact. However, in the long term, Alternative 2 would have a similar less than significant impact to the local AQMPs and a greater but still less than significant cumulative impact. In the long term, Alternative 2 would have a similar impact to the local AQMPs and a reduced cumulative impact since development projects would be more efficient by design. As with the Plan, Alternative 2 achieves order of magnitude reductions in cancer risk levels associated with diesel particulate matter. As with the Plan, Cancer Risk for Alternative 2 remains above the acceptable standard of 1, established by the U.S. Environmental Protection Agency. The cancer risk and impact to public health for Alternative 2 would be substantively similar compared to the Plan since the transportation network is the same as the Plan (Table 4.4-4, *Plan Compared to Alternative 2: Summary of Maximum Exposed Individuals Residential 30-Year Exposure Cancer Risk*). Three of the sixteen segments analyzed for Alternative 2 reduce Cancer Risk by a factor of 1, beyond the reductions achieved by the Plan.

**TABLE 4.4-4
PLAN COMPARED TO ALTERNATIVE 2: SUMMARY MAXIMUM EXPOSED INDIVIDUAL
RESIDENTIAL 30-YEAR EXPOSURE CANCER RISK**

Segment No.	Transportation Segment	County/Region	Alternative 2	2016 RTP/SCS

SOURCE:

Health Risk Assessment (Appendix D).

NOTE:

Cancer Risk Threshold is 10 per 1 million.

Objectionable odors are expected to be similar as well since construction impacts will be similar to the Plan. Objectionable odors would be expected to be similar as well, since construction impacts would be similar to the Plan.

Biological Resources

Alternative 2 would result in somewhat greater impacts to biological resources when compared with the Plan. While Alternative 2 includes the most recent jurisdictional-level local input-based growth forecast (same as that included in the Plan) and captures the HQTAs strategies in the 2016 RTP/SCS, this Alternative has slightly less aggressive land use pattern compared to the Project. Alternative 2 encourages a land use pattern and housing mix that is slightly less compact (39 percent homes and 48 percent jobs in HTQAs) than the Plan (47 percent and 56 percent, respectively) and includes more construction of large lot single-family homes (36 percent or 4 percent more as opposed to 32 percent for the Plan), concurrently with less construction of multifamily homes (2 percent less from 41 percent for the Plan to 39 percent for Alternative 2) (Table 4.3-1). In addition, conversion of greenfield to development would be more dispersed under Alternative 2 as there would be 4 percent more standard residential and 8 percent less housing in HQTAs resulting in an additional 20 square miles of greenfield land to be converted.¹³ Without a more compact land use development pattern as included in the Plan,

¹³ SCAG modeling, 2015.

impacts to biological resources would be more widespread throughout the region. Impacts to biological resources are directly linked to the amount of ground disturbance and habitat conversion in non-urban areas a potential project proposes. Single-family homes, especially large lot single-family homes will require more acreage to accommodate the influx of people into the SCAG region than multi-family homes, and would therefore result in additional conversion in natural habitats and open space and greater impacts to biological resources.

Cultural Resources

Alternative 2 would result in similar impacts in regards to cultural resources when compared with the implementation of the Plan. Impacts to cultural resources are directly linked to the amount of ground disturbance a potential project proposes. Alternative 2 encourages a land use pattern and housing mix that is slightly less compact (39 percent homes and 48 percent jobs in HTQAs) than the Plan (47 percent and 56 percent, respectively) and includes more construction of large lot single-family homes (36 percent or 4 percent more as opposed to 32 percent for the Plan), concurrently with less construction of multifamily homes (2 percent less from 41 percent for the Plan to 39 percent for Alternative 2) (Table 4.3-1). In addition, conversion of greenfield to development would be more dispersed under Alternative 2 as there would be 4 percent more standard residential and 8 percent less housing in HQTAs resulting in an additional 20 square miles of greenfield land to be converted.¹⁴ Single-family homes, especially large lot single-family homes would require more acreage to accommodate the influx of people into the SCAG region than multi-family homes, and would therefore result in additional conversion in previously undeveloped land and greater impacts to cultural resources.

Energy

Alternative 2 would have greater impacts on the residential energy consumption, building energy consumption, water consumption, and water-related energy consumption than the Plan, because this Alternative has lower density and more single-family homes, particularly large lot single-family homes than the 2016 RTP/SCS (Table 4.3-1). Non-renewable energy consumption will also have greater impacts than the Plan because transportation fuel consumption increases with the increased VMT for this Alternative. At 19,983 trillion Btu and \$750 billion, Alternative 2 would result in similar but somewhat higher consumptive energy use and estimated cost of energy use than the Plan.

Geology and Soils

Alternative 2 would result in similar impacts to the Plan as anticipated population growth would remain constant over all of the alternatives and the Project, as the entire region is subject to seismic risk. Alternative 2 would result in slightly more compact development and more development in HQTAs. However, new development would still occur as a result of population growth placing people at risk from seismic activity, and there would be a similar number of transportation projects as the Plan.

Alternative 2 would result in similar impacts as the Plan with regard to the exposure of people or structures to potential substantial adverse effects, including the risk of loss, injury, or death involving rupture of a known earthquake fault, as delineated on the most recent Alquist-Priolo Earthquake Fault

¹⁴ SCAG modeling, 2015,

Zoning Map issued by the State Geologist for the area or based on other substantial evidence of a known fault, strong seismic ground shaking, seismic-related ground failure, including liquefaction, and landslides due to anticipated population growth remaining constant over all of the alternatives and the Project, and the entire region's seismic risk.

Alternative 2 would result in similar impacts as the Plan with regard to substantial soil erosion or the loss of topsoil because there would be a similar amount of transportation projects as the Plan.

Alternative 2 would result in similar impacts as the Plan with regard to being located on a geologic unit or soil that is unstable, or that would become unstable as a result of the project, and potentially result in on- or off-site landslide, lateral spreading, subsidence, liquefaction, or collapse due to there being a similar amount of transportation projects as the Plan.

Alternative 2 would result in similar impacts as the Plan with regard to being located on expansive soil, as defined in Table 18-1-B of the Uniform Building Code (1994), creating substantial risks to life or property due to Alternative 2 having fewer transportation projects than the Plan.

Greenhouse Gas Emissions and Climate Change

The GHG emissions for building energy and water-related energy (56.6 MMTCO_{2e}) would be greater under Alternative 2 compared to the Plan (54.8 MMTCO_{2e}). For transportation, the GHG emissions are projected to be greater under Alternative 2 compared to the Plan because of increased VMT. The Plan would improve regional GHG emissions compared to Alternative 2.

Unlike the Plan, the Alternative 2 would not achieve SB 375 targets for 2020, because the 2012 RTP/SCS transportation network and land use pattern, as updated by local input, fails to achieve the GHG emission reductions made possible by the more integrated transportation and land use strategies in the Plan. Because SCAG has no control over many future emissions factors (e.g., energy and water demand), SCAG made extremely conservative assumptions regarding these factors. Similarly, per capita GHG emissions would decrease compared to the baseline, but not enough to achieve the 8 percent target set for 2020. In addition, Alternative 2 would not be able to accomplish the accelerated goals.

Hazards and Hazardous Materials

Alternative 2 would result in greater impacts related to hazardous materials. Alternative 2 would not include the land use strategies included in the SCS of the Plan that are intended to focus new growth in existing urban and developed areas. Alternative 2 would not include as much redevelopment of urban infill properties or properties that would have already been developed in the past as the 2016 RTP/SCS and, therefore, may result in a greater chance related to disturbance of contaminated sites, and hazards and hazardous materials as compared to the Plan and greater potential impacts.

Hydrology and Water Quality

Alternative 2 would result in greater impacts to hydrology and water quality. Under Alternative 2, more areas would be impacted by excavation and construction activities related to transportation projects as compared to the Plan. Alternative 2 would result in a land use pattern and housing mix that is slightly less compact (39 percent homes and 48 percent jobs in HTQAs) than the Plan (47 percent and 56

percent, respectively) and includes more construction of large lot single-family homes (36 percent or 4 percent more as opposed to 32 percent for the Plan), concurrently with less construction of multifamily homes (2 percent less from 41 percent for the Plan to 39 percent for Alternative 2) (Table 4.3-1). In addition, conversion of greenfield to development would be more dispersed under Alternative 2 as there would be 4 percent more standard residential and 8 percent less housing in HQTAs resulting in an additional 20 square miles of greenfield land to be converted.¹⁵ However, Alternative 2 would not include the land use strategies included in the SCS of the Plan, intended to focus more growth in walkable, mixed-use communities, and existing and planned HQTAs. Therefore, Alternative 2 would result in development patterns consuming a greater amount of land and associated impacts to hydrology and water quality.

Land Use and Planning

Alternative 2 would result in the construction of a similar number transportation projects as the Plan. New growth would occur consistent with local general plans as a result of the local input process. Alternative 2 encourages a land use pattern and housing mix that is slightly less compact (39 percent homes and 48 percent jobs in HTQAs) than the Plan (47 percent and 56 percent, respectively) and includes more construction of large lot single-family homes (36 percent or 4 percent more as opposed to 32 percent for the Plan), concurrently with less construction of multifamily homes (2 percent less from 41 percent for the Plan to 39 percent for Alternative 2) (Table 4.3-1). In addition, conversion of greenfield to development would be more dispersed under Alternative 2 as there would be 4 percent more standard residential and 8 percent less housing in HQTAs resulting in an additional 20 square miles of greenfield land to be converted.¹⁶ However, as a result of the similar scale and number of transportation projects being constructed for both the Plan and Alternative 2, it is likely that in some cases impacts would not be mitigated to a less than significant level.

Alternative 2 would result in less impacts with regard to conflict with any applicable land use plan, policy, or regulation of an agency with jurisdiction over the project (including, but not limited to the general plan, specific plan, local coastal program, or zoning ordinance) adopted for the purpose of avoiding or mitigating an environmental effect due to the similar scale and number of transportation projects being constructed.

Alternative 2 would result in less impacts with regard to physically dividing an established community due to the similar scale and number of transportation projects being constructed.

Alternative 2 would result in greater impacts with regard to conflicting with an HCP or NCCP. Alternative 2 would not include transportation and land use strategies that focus growth along existing corridors and in urbanized areas; nor would it encourage additional greenways. As a result, development would be more scattered throughout the region when compared to the Plan, and native habitat conversion and fragmentation would increase. The Plan includes transportation and land use strategies that focus growth along existing corridors and in urbanized areas, rather than allowing development of vacant, open space/recreation, and agricultural lands. This compact development pattern included in the Plan would concentrate population in urban areas. Without the Plan development pattern, impacts to

¹⁵ SCAG modeling, 2015.

¹⁶ SCAG modeling, 2015.

biological resources would be more widespread throughout the region, and the likelihood of conflicts with an existing HCP or NCCP would be greater.

Mineral Resources

Alternative 2 would result in similar impacts to mineral resources as the Plan. Population growth and subsequent related development would still occur, requiring limited aggregate resources. Transportation network improvements would occur in a similar proportion as the Plan, requiring a comparable amount of aggregate resources to be used for the construction of the transportation network improvements.

Similar to the 2016 RTP/SCS, Alternative 2 would result in significant impacts from the loss of availability of a known mineral resource that would be of value to the region and the residents of the state due to significant impacts from transportation network improvements that would occur in a similar proportion as the Plan requiring a comparable amount of aggregate resources to be used for the construction of the transportation network improvements.

Similar to the 2016 RTP/SCS, Alternative 2 would result in significant impacts from the loss of availability of a locally important mineral resource recovery site delineated on a local general plan, specific plan or other land use plan due to transportation network improvements that would occur in a similar proportion as the Plan with potential to remove an important mineral resource recovery site from production.

Noise

Alternative 2 would result in slightly reduced, but similar impacts from noise when compared with the 2016 RTP/SCS. Alternative 2 would have the same population, housing, and employment as the 2016 RTP/SCS, but in a less dense fashion. Alternative 2 encourages a land use pattern and housing mix that is slightly less compact and has a greater emphasis placed on the construction of single-family homes concurrently with a lower emphasis on multifamily home construction. Fewer transportation projects would be built than under the 2016 RTP/SCS, resulting in less construction noise. However, construction noise would still exceed the significance thresholds established in the CEQA Guidelines. Development would be more scattered throughout the region when compared to the 2016 RTP/SCS. Therefore, operational noise would likely be reduced when compared to the 2016 RTP/SCS since transportation-related activities would be more dispersed throughout the region. However, operational noise would still likely exceed the significance thresholds established in the CEQA Guidelines.

Alternative 2 would result in less impacts from the exposure of persons to or generation of noise levels in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies due to significant impacts from temporary construction noise and permanent operational noise.

Alternative 2 would result in less impacts from the exposure of persons to or generation of excessive groundborne vibration or groundborne noise levels due to significant impacts from temporary construction vibration and permanent operational vibration from heavy trucks and trains.

Alternative 2 would result in less impacts from the substantial permanent increase in ambient noise levels in the project vicinity above levels existing without the project due to the significant impacts from permanent operational noise.

Alternative 2 would result in less impacts from the substantial permanent increase in ambient noise levels in the project vicinity above levels existing without the project due to the significant impacts from permanent operational noise.

Alternative 2 would result in less impacts from the substantial temporary or periodic increase in ambient noise levels in the project vicinity above levels existing without the project due to significant impacts from temporary construction noise.

Alternative 2 would result in less than significant impacts for projects located within an airport land use plan or, where such a plan has not been adopted, within 2 miles of a public airport or public use airport, that result in the exposure of people residing or working in the project area to excessive noise levels.

Alternative 2 would result in less than significant impacts for projects within the vicinity of a private airstrip that result in the exposure of people residing or working in the project area to excessive noise levels.

Population and Housing

Under Alternative 2, the same number of transportation investments would be made to the transportation network as in the Plan. As a result, impacts related to population growth, population displacement, and the need to construct replacement housing would be similar to the Plan. Population growth would still occur for the Plan, the No Project Alternative, and Alternatives 2 and 3. With regard to the displacement of people and the need to construct replacement housing, impacts would be similar to the Plan as the same number of transportation improvements would be made to the transportation network, resulting in a similar likelihood that transportation improvement projects will result in the displacement of people and the need to construct replacement housing.

Alternative 2 would result in similar impacts from the potential to induce substantial population growth in an area, either directly (for example, by proposing new homes and businesses) or indirectly (for example, through extension of roads or other infrastructure) due to the same number of transportation investments being made as the Plan and the same anticipated population growth over the Plan and all alternatives.

Alternative 2 would result in similar impacts from the potential to displace substantial amounts of existing housing, necessitating the construction of replacement housing elsewhere due to the same number of transportation investments being made as the Plan and the same anticipated population growth over the Plan and all alternatives.

Alternative 2 would result in similar impacts from the potential to displace substantial numbers of people, necessitating the construction of replacement housing elsewhere due to the same number of transportation investments being made as the Plan and the same anticipated population growth over the Plan and all alternatives.

Public Services

Alternative 2 would result in similar impacts to the Plan with regard to requiring additional fire protection and emergency response service facilities, and additional public protective security service facilities. Although the number of transportation improvement projects would be less under this Alternative, there would still be a need for new public services as a result of population growth. Population growth would remain constant over all of the alternatives and the Project, which would result in a similar need for fire protection and emergency response service facilities, and additional public protective security service facilities, but the congestion that would result from a lack of additional transportation improvements and a more dispersed population distribution would result in delayed emergency vehicle response times that would require the provision of additional fire protection and emergency response facilities as well as public protective security service facilities to provide adequate service levels. In particular, additional fire protection facilities would be necessary than under the Plan in order to meet emergency response time standards, which range from 5 minutes in urban areas to 12 minutes in more rural areas. Police protection standards are based on sworn officers per 1,000 persons. As a result, the same population growth for the SCAG region over all alternatives would mean that same number of sworn officers would be required. The 2012 RTP/SCS Updated with Local Input Alternative 2 would result in similar impacts to the Plan with regard to requiring additional fire protection and emergency response service facilities, and additional public protective security service facilities. Similarly, with regard to the need for additional schools, impacts would be similar to the Plan.

Recreation

Alternative 2 would result in a somewhat less adverse, but still significant impact when compared to the Plan in regard to increasing use of existing recreational facilities and a similar impact in regard to expanding or constructing recreation facilities. With no concentration of growth, the park usage would be more disperse in urban and suburban areas leading to a reduced need for expansion or construction of recreation facilities, but the reduced need for parks would also be associated with construction of recreational facilities in less urban areas where there is a greater potential for adverse physical effects on the environment to occur.

Transportation, Traffic, and Safety

Alternative 2 would result in somewhat more adverse impact to transportation, traffic, and safety when compare to without implementation of the Plan. Alternative 2 would generally be expected to result in more miles traveled, more vehicle hours traveled, and more delay than the Plan. In 2040, Alternative 2 would result in 23.07 VMT per capita, 13,225 VHT, and 5.74 VHD per capita (Table 4.3-1). Implementation of the Plan would reduce vehicle miles traveled by approximately 1 percent to 22.78 VMT per capita, reduce VHT by 2 percent to 12,977 VHT, and reduce VHD by 5 percent to 5.48 VHD per capita.

The effects of growth and other external factors are included in the Regional Travel Demand Model that produces the results reported above. Because these external factors are modeled, the cumulative effects of regional growth are captured in the VMT, VHT, and VHD data for Alternative 2 (Table 4.3-1). Alternative 2 would have more cumulative impacts than the Plan.

The Plan includes transportation and land use strategies that focus growth along existing corridors and in urbanized areas, discouraging development of vacant, open space/recreation and agricultural lands. This compact pattern of development is complemented by Active Transportation Strategies that encourages development of walking and biking infrastructure, and supportive First mile/Last mile strategies. This compact development pattern included in the Plan would concentrate population in urban areas and encourage alternative modes of travel other than automobiles. While Alternative 2 captures the HQTAs-focus based on local plans, it encourages land use pattern and housing mix that is slightly less urban, less compact, and more standard suburban as compared to the Plan (Table 4.3-1). Also, this Alternative has a slightly weaker land use and transit coordination in HQTAs (39% homes and 48% jobs) than that for the Plan (47% homes and 56% jobs) (Table 4.3-1). Vehicles miles travels, vehicle hours of delay, worker commute trips, and accident rates would be higher than under the Plan.

Utilities and Service Systems

Alternative 2 would result in greater impacts to solid waste disposal and transfer facilities as the Plan. Contrary to the Plan, there would less compact development under Alternative 2. With a less compact development pattern, the need for solid waste disposal facilities for construction related material would be greater under Alternative 2 than under the Plan. The need for new or expanded I wastewater treatment facilities and stormwater drainage facilities to accommodate the less compact development patterns would be greater under Alternative 2 than under the Plan. The jurisdictional level local input-based growth forecast is the same under Alternative 2 as under the Plan, thereby resulting in similar need for solid waste disposal and transfer facilities to accommodate the population. At 133,468,304 acre-feet and \$185 billion, Alternative 2 would result in similar consumptive water use and estimated cost of water to the Plan.

Alternative 3: Intensified Land Use Alternative

Aesthetics

Alternative 3 would result in somewhat less impacts to scenic vistas, similar impacts to scenic highways, visual character, and light and glare, and greater impacts to shade and shadow than the Plan. Conversion of greenfields to development would be less dispersed as there would be less standard suburban residential and more compact walkable land use and homes in HQTAs, resulting in 28 fewer square miles of greenfield land being consumed (see Table 4.3-1 and Table 4.4-1). Alternative 3 would have a similar impact on the scenic highways because there are the same projects that are not located State-designated scenic highway corridors as the Plan. Because population growth would be more concentrated in HQTAs and TPAs than the 2016 RTP/SCS, there would be fewer overall impacts to scenic vistas and visual character and quality in more rural areas than the Plan; however, there would be greater impacts to visual character in existing communities due to impacts to historic buildings, which would ultimately result in similar impacts to visual character. Fewer nighttime lighting impacts would occur in undeveloped areas, yet increased daytime and nighttime glare as a result of taller building and increased shadow-sensitive uses, such as homes, near grade separation projects as the projects are more compact. Therefore, there would be similar light and glare impacts and greater shade and shadow impacts compared to the Plan.

Agriculture and Forestry Resources

Alternative 3 would result in somewhat less impacts related to agriculture and forestry resources when compared with the Plan. Impacts to agricultural resources are directly linked to the amount of agricultural land conversion in non-urban areas. **Table 4.3-1** indicates that there would be slightly more construction of multifamily homes (42 percent) than the Plan (41 percent) and that there would be slightly less construction of large lot single-family homes (31 percent) than the Plan (32 percent). However, Alternative 3 would lead to a much improved land use and transit coordination (50 percent homes and 60 percent jobs) in comparison to the Plan (47 percent and 56 percent, respectively). A further improved land use and transit coordination development pattern would likely require less acreage to accommodate future growth and a higher concentration of development in urban areas will reduce the conversion of agricultural uses. Neither the Plan nor this Alternative is expected to result in the loss of forest land or the conversion of forest land to no-forest use. Therefore, Alternative 3 would result in less conversion of agricultural land and somewhat less impacts to agriculture and forestry resources.

Air Quality

Alternative 3 would have the same population, housing and employment as the Plan, but in a more dense fashion. Similar to the Plan, construction emissions would likely exceed the significance thresholds established in the CEQA Guidelines and result in a significant short-term impact especially considering multiple projects occurring in a condensed area. In the long term, Alternative 3 would have a similar impact to the local AQMPs and a reduced cumulative impact since development projects would be more efficient by design. As with the Plan, Alternative 3 achieves order of magnitude reductions in cancer risk levels associated with diesel particulate matter. As with the Plan, Cancer Risk for Alternative 3 remain above the acceptable standard of 1, established by U.S. Environmental Protection Agency. The cancer risk and impact to public health for Alternative 3 would be similar when compared to the Plan since the transportation network is the same as the Plan with minor adjustments for land use and transit coordination strategies (**Table 4.4-5, *Plan Compared to Alternative 3: Summary of Maximum Exposed Individuals Residential 30-Year Exposure Cancer Risk***). Five of the sixteen segments analyzed for Alternative 3 reduce Cancer Risk, beyond the reductions achieved by the Plan. However, for two of the segments analyzed, Segment 7 (Orange) and Segment 14 (San Bernardino) result in increased Cancer Risk. Segment 14 results in substantial increase in Cancer Risk when compared to the Plan; therefore, Segment 14 would be expected to result in greater health risk than the Plan .

SOURCE:

Health Risk Assessment (Appendix D).

NOTE:

Cancer Risk Threshold is 10 per 1 million.

Objectionable odors are expected to be similar as well since construction impacts will be similar to the Plan.

Biological Resources

Alternative 3 would result in somewhat less impacts related to biological resources when compared with the implementation of the Plan. Impacts to biological resources are directly linked to the amount of native habitat conversion in non-urban areas a potential project proposes. Table 4.3-1 indicates that there would be slightly more construction of multifamily homes (42 percent) than the Plan (41 percent) and that there would be slightly less construction of large lot single-family homes (31 percent) than the Plan (32 percent). However, Alternative 3 would lead to a much improved land use and transit coordination (50 percent homes and 60 percent jobs) than the Plan (47 percent and 56 percent, respectively). Increasing the density and intensity of development within existing communities may potentially increase impacts to urban area “pockets” of protected habitat areas for sensitive species and open space areas used as wildlife corridors within urbanized areas. While Alternative 3 would affect fewer acres of natural lands, impacts to biological resources in and near the urban areas would remain significant because impacts to sensitive species in areas that are currently protected may occur. Overall, a further improved land use and transit coordination development pattern associated with Alternative 3 would require less acreage to accommodate the influx of people into the SCAG region than single-family homes, and a higher concentration of development in urban areas will reduce the conversion of native

habitats. Therefore, Alternative 3 would result in somewhat less habitat conversion and fewer impacts to biological resources.

Cultural Resources

Alternative 3 would result in slightly less impacts in regards to cultural resources when compared with the implementation of the Plan, due to the fact that there would be a net reduction of 28 square miles of greenfield development (Table 4.3-1). Impacts to cultural resources are directly linked to the amount of ground disturbance a potential project proposes. Table 4.3-1 indicates that there would be slightly more construction of multifamily homes (42 percent) than the Plan (41 percent) and that there would be slightly few construction of large lot single-family homes (31 percent) than the Plan (32 percent). However, Alternative 3 would lead to a much improved land use and transit coordination (50 percent homes and 60 percent jobs) than the Plan (47 percent and 56 percent, respectively).

Further, increases in the density and intensity of development within existing communities could result in an increased likelihood of adverse direct and indirect impacts to cultural resources (including historic, archeological and paleontological resources) located within the existing urbanized areas, particularly within established communities in the region. Historic and archeological resources frequently occur within the region based on pre-historic and historic use patterns that concentrated development near the reliable water resources and trade routes that formed the framework for the existing regional development pattern. Archeological resources have been discovered (and often disturbed) in infill and urbanized areas (such as Playa Vista). A further improved land use and transit coordination development pattern would require less acreage to accommodate the influx of people into the SCAG region, and would therefore result in less ground disturbance and fewer impacts to cultural resources.

Energy

This Alternative contains more mixed-use, walkable, and urban infill development to accommodate a higher proportion of growth in more energy-efficient housing types like townhomes, apartments, and smaller single-family homes, as well as more compact commercial building types. As a result, residential energy consumption, building energy consumption, water consumption, and water-related energy consumption would decrease compared to the 2016 RTP/SCS because there will be a higher percentage of multi-family units and higher density in the land use. Non-renewable energy consumption would also have fewer impacts than the Plan because transportation fuel consumption decreases with the decreased VMT for Alternative 3.

At 19,983 trillion Btu and \$728 billion, Alternative 3 would result in similar but somewhat lower consumptive energy use and estimated cost of energy use than the Plan.

Geology and Soils

Alternative 3 would result in similar impacts as the Plan with regard to the exposure of people or structures to potential substantial adverse effects, including the risk of loss, injury, or death involving Rupture of a known earthquake fault, as delineated on the most recent Alquist-Priolo Earthquake Fault Zoning Map issued by the State Geologist for the area or based on other substantial evidence of a known fault, strong seismic ground shaking, seismic-related ground failure, including liquefaction, and landslides due to anticipated population growth remaining constant over all of the alternatives and the

Project, and the entire region's seismic risk. This Alternative would result in more compact development and more development in HQTAs than the Plan. However, new development would still occur as a result of population growth placing people at risk from seismic activity.

Alternative 3 would result in similar impacts as the Plan with regard to substantial soil erosion or the loss of topsoil due to there being a similar amount of transportation projects as the Plan.

Alternative 3 would result in similar impacts as the Plan with regard to being located on a geologic unit or soil that is unstable, or that would become unstable as a result of the project, and potentially result in on- or off-site landslide, lateral spreading, subsidence, liquefaction, or collapse due to there being a similar amount of transportation projects as the Plan.

Alternative 3 would result in similar impacts as the Plan with regard to being located on expansive soil, as defined in Table 18-1-B of the Uniform Building Code (1994), creating substantial risks to life or property due to there being a similar amount of transportation projects as the Plan.

Greenhouse Gas Emissions and Climate Change

The GHG emissions for building energy and water-related energy (53.9 MMTCO_{2e}) would be less with Alternative 3 compared to the Plan (54.8 MMTCO_{2e}). For transportation, the GHG emissions are projected to be less under Alternative 3 compared to the Plan because of decreased VMT. Alternative 3 would improve regional GHG emissions compared to the 2016 RTP/SCS.

As with the Plan, the GHG emissions achieved by Alternative 3 are in alignment with the AB 32 goals. As with the Plan, Alternative 3 would reduce per capita GHG emissions compared to the 2005 baseline so it would achieve both the 8 percent target set for 2020 and exceed the 13 percent set for 2035, set pursuant to SB 375.

Hazards and Hazardous Materials

Alternative 3 would result in greater impacts related to hazardous materials. Alternative 3 would not include the land use strategies included in the SCS of the Plan that are intended to focus new growth in existing urban and developed areas. Alternative 3 would not include as much redevelopment of urban infill properties or properties that would have already been developed in the past as the 2016 RTP/SCS and, therefore, may result in a greater chance related to disturbance of contaminated sites, and hazards and hazardous materials as compared to the Plan and greater potential impacts.

Hydrology and Water Quality

Under Alternative 3, fewer undeveloped areas would be impacted by excavation and construction activities related to transportation projects as compared to the Plan. Alternative 3 focuses on further aggressive and compact development in HQTAs, and further expansion of non-motorized transportation, thereby resulting a much better coordination between land use and transit (50 percent homes and 60 percent jobs as opposed to 47 percent homes and 56 percent jobs in Table 4.3-1). Additionally, Under Alternative 3, there would be slightly more multifamily homes and fewer large lot single-family homes. Hence, this Alternative would likely result in a somewhat more reduction in the amount of impervious surfaces and decreasing impacts to water resources as compared to the 2016 RTP/SCS.

Land Use and Planning

Alternative 3 would result in greater impacts to land use and planning as the Plan. Alternative 3 would result in a greater chance for there to be conflicts with an existing plans or regulations including local general plans as a result of the policies encouraging a much more compact land use development pattern in urbanized areas such as HQTAs. This Alternative would result in the construction of a substantively similar number and scale of transportation projects as the Plan, which would result in similar impacts related to the division of an established community or conflict with existing plans. Additionally, there would be a greater chance for there to be conflicts with an existing plan or regulation including local general plans because of the much more compact and aggressive land use development pattern in urbanize areas such as HQTAs.

Alternative 3 would result in greater impacts with regard to conflict with any applicable land use plan, policy, or regulation of an agency with jurisdiction over the project (including, but not limited to the general plan, specific plan, local coastal program, or zoning ordinance) adopted for the purpose of avoiding or mitigating an environmental effect due to the similar scale and number of transportation projects being constructed.

Alternative 3 would result in similar impacts with regard to physically dividing an established community due to the similar scale and number of transportation projects being constructed.

Mineral Resources

Alternative 3 would result in similar impacts to mineral resources as the Plan. Population growth and subsequent related development would still occur, requiring limited aggregate resources. With this Alternative, more development would occur in a compact manner focused in and around HQTAs. However, transportation network improvements would occur in a similar proportion as the Plan requiring a comparable amount of aggregate resources to be used for the construction of the transportation network improvements.

Similar to the 2016 RTP/SCS, Alternative 3 would result in significant impacts from the loss of availability of a known mineral resource that would be of value to the region and the residents of the state due to significant impacts from transportation network improvements that would occur in a similar proportion as the Plan, requiring a comparable amount of aggregate resources to be used for the construction of the transportation network improvements.

Similar to the 2016 RTP/SCS, Alternative 3 would result in significant impacts from the loss of availability of a locally important mineral resource recovery site delineated on a local general plan, specific plan or other land use plan due to transportation network improvements that would occur in a similar proportion as the Plan with potential to remove an important mineral resource recovery site from production.

Noise

Alternative 3 would result in greater impacts from noise when compared with the 2016 RTP/SCS. Alternative 3 would have the same jurisdictional level local input-based population, housing, and

employment as those in the 2016 RTP/SCS, but the difference is that this Alternative would cause land use development and distribution patterns to be in a more compact and dense. The projected housing mix and growth for Alternative 3 indicates there would be slightly more multifamily homes and a slightly fewer large lot single-family homes, along with a higher concentration of development in urban areas. When compared with the 2016 RTP/SCS, Alternative 3 would further intensify transportation and land use strategies that focus growth along existing corridors and in urbanized areas and further strengthen the land use and transit coordination; thereby having a potential resulting in somewhat greater noise impacts from the more intensified level of construction or operation of new transportation infrastructure and the development in HQTAs. A greater number of individual projects would be built within condensed areas when compared to the 2016 RTP/SCS, resulting in greater temporary construction noise, which would exceed the significance thresholds established in the CEQA Guidelines. Development would be more dense and clustered in HQTAs and opportunity areas when compared to the 2016 RTP/SCS. Since there would be more transit-related activities within HQTAs, operational noise would also likely be increased in these areas when compared to the 2016 RTP/SCS, which would exceed the significance thresholds established in the CEQA Guidelines.

Similar to the 2016 RTP/SCS, Alternative 3 would result in significant impacts from the exposure of persons to or generation of noise levels in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies due to significant impacts from temporary construction noise and permanent operational noise.

Alternative 3 would result in greater impacts from the exposure of persons to or generation of excessive groundborne vibration or groundborne noise levels due to significant impacts from temporary construction vibration and permanent operational vibration from heavy trucks and trains.

Alternative 3 would result in greater impacts from the substantial permanent increase in ambient noise levels in the project vicinity above levels existing without the project due to the significant impacts from permanent operational noise.

Alternative 3 would result in greater impacts from the substantial permanent increase in ambient noise levels in the project vicinity above levels existing without the project due to the significant impacts from permanent operational noise.

Alternative 3 would result in greater impacts from the substantial temporary or periodic increase in ambient noise levels in the project vicinity above levels existing without the project due to significant impacts from temporary construction noise.

Alternative 3 would result in less than greater impacts for projects located within an airport land use plan or, where such a plan has not been adopted, within 2 miles of a public airport or public use airport, that result in the exposure of people residing or working in the project area to excessive noise levels.

Alternative 3 would result in less than greater impacts for projects within the vicinity of a private airstrip that result in the exposure of people residing or working in the project area to excessive noise levels.

Population and Housing

Under Alternative 3, the same number of transportation investments would be made to the transportation network as in the Plan but development would be even more concentrated and densified in HQTAs than the Plan. However, impacts related to population growth, population displacement, and the need to construct replacement housing would be similar to the Plan. The projected population growth discussed under the Plan would still occur under the Plan and all of the alternatives. With regard to the displacement of people and the need to construct replacement housing, impacts would be somewhat more adverse than the Plan as a result of higher population growth in designated communities within HQTAs and an increase in the number of residences or business that are displaced as a result of more compact, higher density redevelopment.

Alternative 3 would result in similar impacts as the Plan from the potential to Induce substantial population growth in an area, either directly (for example, by proposing new homes and businesses) or indirectly (for example, through extension of roads or other infrastructure) due to the same number of transportation investments being made as the Plan and the same anticipated population growth over the Plan and all alternatives.

Alternative 3 would result in somewhat more adverse impacts as the Plan from the potential to displace substantial amounts of existing housing, necessitating the construction of replacement housing elsewhere due to higher population growth in designated communities within HQTAs and an increase in the number of residences or business that are displaced as a result of more compact, higher-density redevelopment.

Alternative 3 would result in greater impacts as the Plan from the potential to displace substantial numbers of people, necessitating the construction of replacement housing elsewhere due to higher population growth in designated communities within HQTAs and an increase in the number of residences or business that are displaced as a result of more compact, higher-density redevelopment.

Public Services

Under the Intensified Land Use Alternative 3, the same number of transportation investments would be made to the transportation network as in the Plan, but development would be more concentrated in HQTAs than the Plan, but development would be more concentrated in HQTAs than the Plan and more people would live and work in high-density buildings. This Alternative would therefore result in somewhat more adverse impacts than the Plan with regards to requiring additional fire protection and emergency response service facilities, and additional public protective security service facilities and school facilities, due to the increase on population density. In general, urban areas are well served by police, fire and emergency services, although the recent economic recession and structural financing challenges for municipal services have resulted in some curtailments in services. Substantially increasing population densities and building intensities would place additional strain on existing facilities, service ratios and new challenges on existing fire, police protection and emergency services. For example, fire trucks and other response equipment that is designed to service traditional development patterns with wider streets (allowing larger trucks) in communities with few if any buildings higher than three to four stories would not be suitable for narrower, walkable street designs and mid- and high-rise construction. Firefighter training for different types of structural fires, and different fire pattern risks in high-density building areas, would also be required. Similarly, suburban policing models and facilities generally are

very automobile-dependent, with a central station and patrol car service as the backbone of suburban community policing. Police services in higher density, urbanized areas often require (or benefit from) different deployment models including more substations and more foot and bicycle patrols. Police protection standards are based on sworn officers per 1,000 persons. Due to population growth being concentrated in urbanized areas, new officers to patrol these areas would need to be hired and additional facilities to support police serves would need to constructed.

Recreation

Alternative 3 would have a greater impact in regard to increasing use of existing recreational facilities and a similar impact in regard to expanding or constructing recreation facilities. With the same population growth anticipated as the Plan, the need for the construction of parks would be similar. However, fewer communities with planned high-density growth would be able to meet Quimby Act targets for parks than under the Plan. With higher population density, there would more use of the same parks, leading to greater deterioration of existing recreational facilities in urban areas. As with the Plan, park development and expansion in urban areas is normally beneficial, although there may be limited instances where impacts will occur during construction or expansion of a park.

Transportation, Traffic, and Safety

Alternative 3 would result in somewhat more adverse transportation impacts than the Plan. Alternative 3 would result in 19,550 VMT per household annually, less than the Plan's 20,500 VMT per household annually and the VMT in the base year, and Alternative 3 would generally be expected to result in fewer miles traveled, fewer vehicle hours traveled, and less delay than the Plan. In 2040, Alternative 3 would result in 22.47 VMT per capita, 12,763 VHT and 5.30 VHD per capita (Table 4.3-1). Comparing these number to the Plan (22.78 VMT per capita, 12,977 VHT and 5.48 VHD per capita), Alternative 3 would reduce vehicle miles traveled by approximately 1 percent, reduce VHT by 2 percent, and reduce VHD by 3 percent. Despite the overall reduction in VMT and VHD as compared to the Plan, Alternative 3 does not maximize mobility and accessibility for all people and goods in the region to the extent of the 2016-2040 RTP/SCS because it results in more severe localized traffic congestion conditions with adverse mobility and reliability consequences for goods and people (increased vehicle and truck delay).

The effects of growth and other external factors are included in the RTDM that produces the results reported above. Because these external factors are modeled, the cumulative effects of regional growth are captured in the VMT, VHT and VHD data for Alternative 3. Alternative 3 increases localized congestion and compromises accessibility to destinations which would result in more adverse effects related to safety considerations for pedestrians, cyclists, and motorists.¹⁷ Hence, this Alternative would have somewhat more adverse impacts than the Plan.

Utilities and Service Systems

Alternative 3 would result in fewer impacts related to solid waste disposal and transfer facilities than the Plan. Alternative 3 includes the transportation network that is included in the Plan; therefore, construction and operation of transportation projects under this Alternative would require a similar

¹⁷ RAND. 2008. Research Brief. "Reducing Traffic Congestion in Los Angeles." 1776 Main Street, Santa Monica, CA 90407.

amount of solid waste disposal and transfer facilities during project construction. However, the growth scenario associated with Alternative 3 maximizes urban centers, TODs and HQTAs; and it also includes a more progressive jobs/housing distribution optimized for TOD and infill. . At 132,723,264 acre-feet acre-feet and \$184 billion , Alternative 3 would result in similar consumptive water use and estimated cost of water to the Plan.

4.5 ENVIRONMENTALLY SUPERIOR ALTERNATIVE

Section 15126.6 of the State CEQA Guidelines requires that an “environmentally superior” alternative be selected among the alternatives that are evaluated in the EIR. In general, the environmentally superior alternative is the alternative that would be expected to generate the fewest adverse impacts. If the No Project alternative is identified as environmentally superior, then another environmentally superior alternative shall be identified among the other alternatives.

For purposes of this PEIR, the impacts associated with reducing global GHG emissions and regional air pollutants must be examined alongside the other adverse impacts that are caused by increasing the density and intensity of the region’s development patterns and, for example, bringing people closer to higher sources of air pollutants such as transit corridors and freeways. The tension between CEQA’s mandate to reduce all types of impacts to the maximum extent feasible, and the statutory mandates of reducing GHG emissions under AB 32 and SB 375, is a well-recognized CEQA compliance challenge.¹⁸ CEQA does not provide any legal mechanism for “weighting” environmental impacts, and scoring some categories of impacts as “more important” and others as “less important.” Instead, CEQA is structured to require the disclosure of all impacts for each Alternative and the Plan, to foster informed decision making and to disclose the inherent trade-offs between different types and magnitudes of impacts associated with different Alternatives.

As indicated by the comparative analysis, the Plan and each Alternative result in many impacts that are “significant and unavoidable” under CEQA (Table 4.5-1, *Summary of Comparative Impacts between Alternatives and the Proposed Project*). Alternative 3, Intensified Land Use Alternative, would result in somewhat less adverse impacts for nine of the 18 environmental issues that were analyzed pursuant to Appendix G of the State CEQA Guidelines (agriculture and forestry resources; biological resources; cultural resources; energy, greenhouse gas emissions and climate change; hazards and hazardous materials; hydrology and water quality; transportation, traffic, and safety; and utilities and service systems). The anticipated increases in the density and intensity of development within the region’s established communities under Alternative 3 would result in more localized impacts that are greater than the Plan in four areas (land use; noise; public services and recreation).

Of the three alternatives, Alternative 3 would be considered the environmentally superior alternative from the perspective of fewer impacts to natural lands and reduced GHG emissions because it substantially restricts the use of land for single-family development, in a manner that differs from the adopted general plans of the six counties and 191 member cities in the SCAG region. Alternative 3 concentrates development in existing urban centers around transit stations and activity centers and, therefore, has less impact on rural and undeveloped areas. However, Alternative 3 would have much

¹⁸ Adams, Tom (California League of Conservation Voters), and Amanda Eaken and Anne Nothoff (Natural Resources Defense Council). 2010. *Tackling California’s Global Warming Challenge: A Guide to SB 375*, by Tom Adams (California League of Conservation Voters), p. 24.

more severe impacts on the built environment (i.e., seven CEQA impact categories: localized air quality, land use; noise and vibration, displacement, public services, traffic delay, and existing overtaxed recreation facilities in the vicinity of HQTAs).

Of the three alternatives, Alternative 3 would be considered the environmentally superior alternative because it uses a more compact land use pattern (Table 4.5-1). Alternative 3 requires implementation of the same mitigation measures required for the 2016 RTP/SCS and would not resolve any of the significant and unavoidable impacts of the Plan. However, the more intensified and compact land use development pattern would result in somewhat less adverse impacts to energy, land, and water resources due to the more densified pattern of development. Alternative 3 would also achieve greater overall reductions in criteria air pollutants and greenhouse gas emissions, as a result of the more compact pattern of land use development. The level of impact for Alternative 2 and Alternative 3 varies in relation to the land use development pattern, but neither is capable of avoiding any of the significant and unavoidable impacts of the Plan, because those impact are primarily associated with net increase in population that is anticipated for the SCAG region. Therefore, the comparative impacts between the alternatives and the Project are primarily related to the level of severity of the impacts.

Similarly, the No Project Alternative does not avoid the significant and unavoidable impacts of the 2016 RTP/SCS, and in several instances the impacts would be more adverse due to the failure to achieve reductions in the consumptive use of land, energy, and water resources achieved through the policies and program embedded in the 2016 RTP/SCS that facilitate a more efficient use of these resources. The proposed project, Alternative 2, and Alternative 3 would have less than significant impacts in relation to cumulatively considerable impacts for pollutants in non-attainment. However, the No Project Alternative would have significant and unavoidable impacts.

**TABLE 4.5-1
SUMMARY OF COMPARATIVE IMPACTS BETWEEN ALTERNATIVES AND THE PROPOSED PROJECT**

Alternative	More Adverse Impacts When Compared to the Proposed Project	Similar Impacts When Compared to the Proposed Project	Less Adverse Impacts When Compared to the Proposed Project
Alternative 1: No Project	<p>Agriculture and Forestry Resources</p> <p>Air Quality</p> <p>Biological Resources</p> <p>Cultural Resources</p> <p>Energy</p> <p>Geology and Soils</p> <p>Greenhouse Gas Emissions and Climate Change</p> <p>Hazards and Hazardous Materials</p> <p>Hydrology and Water Quality</p> <p>Transportation, Traffic, and Safety</p> <p>Utilities and Service Systems</p>	<p>Aesthetics</p> <p>Public Services</p> <p>Recreation</p>	<p>Land Use</p> <p>Mineral Resources</p> <p>Noise</p> <p>Population, Housing, and Employment</p>
Alternative 2: 2012 RTP/SCS Updated with Local Input Alternative	<p>Agriculture and Forestry Resources</p> <p>Biological Resources</p> <p>Energy</p> <p>Greenhouse Gas Emissions and Climate Change</p> <p>Hazards and Hazardous Materials</p> <p>Hydrology and Water Quality</p> <p>Transportation, Traffic, and Safety</p> <p>Utilities and Service Systems</p>	<p>Aesthetics</p> <p>Air Quality</p> <p>Cultural Resources</p> <p>Geology and Soils</p> <p>Mineral Resources</p> <p>Population, Housing, and Employment</p> <p>Public Services</p>	<p>Land Use</p> <p>Noise</p> <p>Recreation</p>

5.0

LONG-TERM CEQA CONSIDERATIONS

Section 15126 of the CEQA Guidelines requires that all phases of a project must be considered when evaluating its impact on the environment, including planning, acquisition, development and operation. As part of this analysis, the EIR must also identify (1) significant environmental effects of the proposed project, (2) significant environmental effects that cannot be avoided if the proposed project is implemented, (3) significant irreversible environmental changes that would result from implementation of the proposed project, and (4) growth-inducing impacts of the proposed project. Additionally, this section addresses irreversible damage from environmental accidents.

5.1 SIGNIFICANT ENVIRONMENTAL EFFECTS THAT CANNOT BE AVOIDED IF THE PROPOSED PROJECT IS IMPLEMENTED

Table ES.4-1, *Summary of Environmental Consequences*, in the Executive Summary, and Sections 3.1 through 3.18 of this PEIR provide a comprehensive identification of the environmental effects of the 2016 Regional Transportation Plan/Sustainable Communities Strategy (2016 RTP/SCS, “Plan,” or “Project”), including the level of significance both before and after mitigation. Many of the impacts that are determined to be significant and unavoidable could be mitigated to less than significant at the project level. However, this PEIR is at the programmatic level project information, and detailed site plans and project descriptions are not available. Therefore, without the ability to evaluate each project that could occur as a result of the 2016 RTP/SCS, these impacts were determined to be significant and unavoidable.

Section 15126.2(b) of the CEQA Guidelines requires that an EIR (including a Program EIR or PEIR, describe any significant impacts that cannot be avoided, even with the implementation of feasible mitigation measures. Implementation of the 2016 RTP/SCS would result in the following unavoidable significant and Project-related and/or cumulative impacts:

- **Aesthetics**—Implementation of the 2016 RTP/SCS would obstruct views of or alter the appearance of scenic resources or vistas along designated scenic highways and vista points. In addition, construction and implementation of the projects associated with the Plan would create significant contrasts with the overall visual character of the landscape, as well as light and glare and shade and shadow effects. The effects of each of these impacts would also result in cumulative impacts outside the region.
- **Agriculture and Forestry Resources**—Implementation of the 2016 RTP/SCS could result in the loss of prime farmland or grazing lands. The Plan would also contribute to a cumulatively impacts due to the considerable loss of agriculture and forestry resources.
- **Air Quality**—Construction emissions from implementation of the 2016 RTP/SCS would result in a significant impact on air quality. In the SCAG region, the three criteria pollutants designated nonattainment are PM_{2.5}, PM₁₀, and ozone (Table 3.3.2-3, *2015 Nonattainment Areas in the SCAG Region for All Criteria Pollutants by County by NAAQs*). Despite temporary significant construction emissions, long term criteria pollutant emissions by county is expected to decline with implementation of the Plan (Table 3.3.4-1, *Criteria Pollutant Emission by County – Existing Conditions [2015] vs. Plan [2040]*). Transportation

conformity with air quality management plans and state implementation plans are required under federal CAA Section 176(c) for federal funding and compliance with air quality goals. As the Plan only focuses on certain sectors, the Plan would also contribute to cumulative impacts with respect to air quality.

- **Biological Resources**—Implementation of the 2016 RTP/SCS would displace natural vegetation, some of which is used as habitat for sensitive species in the SCAG region. Projects included in the Plan would contribute to habitat fragmentation of existing habitat, while forming barriers to animal migration or foraging routes. Construction and operation of projects and development anticipated to occur under the Plan would increase near-road disturbances such as litter, trampling, light pollution, and road noise, and would result in damage to previously inaccessible and undisturbed natural areas, or direct fatalities to wildlife. The Plan could result in potentially displacing or disturbing riparian or wetland habitat, prime farmland or grazing lands, or existing open space and recreation lands. In addition, siltation of streams and other water resources may result from construction activities in proximity to erodible soils. The Plan would also contribute to cumulative impacts due to the considerable loss of biological resources.
- **Cultural Resources**—Implementation of the 2016 RTP/SCS could disturb or cause a substantial adverse change in the significance of a historical, archaeological, paleontological resource or human remains. The Plan would also contribute to a cumulative impacts due to the considerable loss of cultural resources.
- **Energy**—Transportation projects and land use strategies included in the 2016 RTP/SCS would result in the increased use of electricity and natural gas. The Plan would also contribute to a cumulatively considerable demand for energy within and outside of the region.
- **Geology and Soils**—Implementation of the 2016 RTP/SCS would expose people or structures to seismic hazards such as surface rupture, ground shaking, liquefaction, landslides, seismically induced ground-shaking, or seiches or tsunami waves. In addition, transportation projects and anticipated development associated with land use strategies included in the Plan could be located on expansive or unstable soils, resulting in potential on- or off-site landslide, lateral spreading, subsidence, liquefaction or collapse. Earthwork associated with construction of Plan's transportation projects and development associated with land use strategies could also result in substantial soil erosion and/or loss of topsoil. Potentially hazardous geological and seismic conditions are found throughout the SCAG region and Southern California in general, and are generally site specific. The 2016 RTP/SCS encompasses all development (both transportation and land use changes) that would occur in the region through 2040 and the impacts of that development are discussed fully above. As a result, the Project would be expected to contribute to a cumulatively considerable increase in risk associated with geologic hazards.
- **Greenhouse Gas Emissions and Climate Change**— Implementation of the 2016 RTP/SCS would decrease greenhouse gas (GHG) emissions by 27 million metric tons by 2040 as compared to existing conditions (Table 3.8.4.2, *Greenhouse Gas Emissions Summary for the SCAG Region*). The Plan would meet and exceed the per capita GHG emissions reduction targets set by CARB pursuant to SB 375. In fact, the Plan would achieve its per

capita GHG emissions reduction target for 2035 at an accelerated rate which sets the Plan on a trajectory of yielding greater progress post 2035, in 2040 and beyond, which is consistent with achieving State's long-term GHG emission goals. By meeting the SB 375 targets, the Plan has contributed its share, if not greater, to meeting the AB 32 targets. The Plan is also in alignment with county and/or city-climate related plans. The GHG reduction trajectory of the Plan is consistent, if not more aggressive, with the accelerated pace established in the recent Executive Order B-30-15 and the State long-term (2050) GHG emissions reduction goals. Cumulative impacts with respect to GHG emissions would occur in the event project level mitigation measures not capable to fully address cumulative impacts of GHG emissions to the appropriate level.

- Hazards and Hazardous Materials—Implementation of the 2016 RTP/SCS would increase the risk of significant hazards to the public or the environment through the routine transport, use, or disposal of hazardous materials. Transportation projects and land use strategies included in the Plan may increase the risk of emitting hazardous materials within one-quarter mile of a school. In addition, the increased mobility associated with the Plan could cause cumulative significant impacts with respect to the risk associated with hazardous materials transport to areas outside of the SCAG region. While impact to hazards and hazardous materials can be minimized with proper storage and handling of materials as guided by the business plan, the impact from transport of hazardous materials from other regions would remain cumulatively significant.
- Hydrology and Water Quality—Implementation of the 2016 RTP/SCS would degrade local surface water quality due to increased roadway runoff due to construction of transportation projects and development encouraged by land use strategies. Increased impervious surfaces would reduce groundwater infiltration. The Plan would influence the pattern of urbanization in the SCAG region, and would contribute to the conversion of undeveloped land to urban areas. This would result in impacts to storm water infiltration and groundwater recharge. In addition, this increased urbanization would contribute to an increased demand for water supply and associated infrastructure, as well as an increased need for waste water treatment capacity. The Plan would contribute to a cumulatively considerable impact on water supply and water quality.
- Land Use and Planning—Implementation of the land use policies and strategies in the 2016 RTP/SCS would result in potential conflicts with existing local general plans, adopted local land use/specific plans and other goals and policies. Projects associated with the Plan have the potential to disrupt or divide established communities. Cumulative impacts within and outside the SCAG region could occur due to conflicting policies.
- Mineral Resources— Implementation of the Plan would also result in a significant loss of aggregate resources in the region and would also contribute to a cumulatively impacts due to the considerable loss of these resources.
- Noise—Transportation projects and development encouraged by land use strategies would expose noise- and vibration-sensitive land uses to noise and vibration in excess of normally acceptable levels and/or experience substantial increases in noise and vibration as a result of new or expanded transportation or other facilities. Such facilities may increase ambient

noise levels in urban areas of the region to exceed normally acceptable levels. Noise would result in cumulative impacts.

- Population, Housing, and Employment—Implementation of the 2016 RTP/SCS may influence substantial population growth to some areas of the region, and could require the acquisition of rights-of-way for transportation projects and development associated with land use strategies. These actions could displace existing homes and businesses. The Plan would contribute to cumulatively considerable impacts related to population and housing.
- Public Services—Implementation of the 2016 RTP/SCS would result in increased need for police, fire, and emergency personnel, and increase the demand for school facilities within the SCAG region and would contribute to cumulatively considerable impacts due to the need for additional public service facilities.
- Recreation—Implementation of the 2016 RTP/SCS would result in increased need for recreation facilities and would contribute to cumulatively considerable impacts due to the need for new recreation facilities.
- Transportation, Traffic, and Safety—Implementation of transportation projects and land use strategies included in the 2016 RTP/SCS would increase total daily vehicle miles of travel (VMT) in 2040 compared to current daily VMT and would create substantially greater average daily vehicle hours of delay (VHD) for heavy-duty truck trips in 2040 compared to the current condition. This increase would result in substantial cumulative impacts with respect to increased VMTs and VHDs.
- Utilities and Service Systems—The Plan would result in the expansion or construction of new wastewater treatment facilities, expansion or construction of new stormwater drainage facilities, increase use of limited water supplies, and increase use of limited landfill capacity. The Plan would contribute to cumulative impacts due to the considerable demand for utilities and service systems. Increased population in and surrounding SCAG region would result in increased need for water conveyance capacities, resulting in expansion or construction of new stormwater drainage facilities. This increase would result in substantial cumulative impacts with respect to increase use of water supplies.

5.2 SIGNIFICANT IRREVERSIBLE ENVIRONMENTAL EFFECTS

Section 15126.2(c) of the CEQA Guidelines requires a discussion of any significant irreversible environmental changes that would be caused by the proposed project (2016 RTP/SCS). Specifically, Section 15126.2(c) states:

Uses of nonrenewable resources during the initial and continued phases of the project may be irreversible, since a large commitment of such resources makes removal or nonuse thereafter unlikely. Primary impacts and, particularly secondary impacts (such as highway improvement which provides access to a previously inaccessible area) generally commit future generations to similar uses. Also irreversible damage can result from environmental accidents associated with the project. Irreversible commitments of resources should be evaluated to assure that such current consumption is justified.

Generally, a project (2016 RTP/SCS) would result in significant irreversible environmental changes if any of the following would occur:

- The primary and secondary impacts would generally commit future generations to similar uses.
- The project would involve a large commitment of nonrenewable resources.
- The project involves uses in which irreversible damage could result from any potential environmental accidents associated with the project.
- The proposed consumption of resources is not justified (e.g., the project involves the wasteful use of energy).

Implementation of the 2016 RTP/SCS would result in permanent changes to the existing conditions, which have been described throughout this PEIR. While the Plan focuses development into existing urban areas and along existing or future high-quality transit areas (HQTAs), there will still be some conversion of undeveloped land to urbanized uses. These conversions are considered a permanent irreversible change and would occur directly through construction of development on undeveloped land.

Land use changes and transportation projects would result in significant irreversible impacts to aesthetics and visual resources, including changes to existing community character and views. Future development projects associated with the Plan would result in a direct irreversible loss of sensitive vegetation communities that supports rare, threatened, or endangered species, and impacts to these resources would be significant and irreversible. Transportation projects and other land use changes would result in significant irreversible impacts to agricultural resources and forest lands, and the availability of known cultural and mineral resources. The Plan would substantially induce irreversible population growth and increased density, which would displace existing housing units, and result in additional people that would be susceptible to noise impacts. As development occurs at urban edges, additional people and structures would be at risk from landslides, seismic activities, wildland fires and other potential dangers.

The Plan's regional growth and land use changes would result in the irreversible consumption of nonrenewable resources. The irreversible commitment of limited resources is inherent in any development project or, in the case of the Plan, combined development projects. Resources anticipated to be irreversibly committed over the timespan of the construction activities related to the Plan include, but are not limited to, lumber and other related forest products; sand, gravel, and concrete; petrochemicals; construction materials; steel, copper, lead, and other metals; and water. However, the amount and rate of consumption of these resources would not result in significant environmental impacts related to the unnecessary, inefficient, or wasteful use of resources. Development associated with the Plan represents a long-term commitment to the consumption of fossil fuel oil and natural gas. These increased energy demands relate to construction, lighting, heating, and cooling of residences and buildings, and construction and operation of transit systems.

5.3 GROWTH INDUCING IMPACTS

Section 15125.2(d) of the CEQA Guidelines requires that growth inducing impacts of a proposed project be considered. Growth inducing impacts are characteristics of a project that could directly or indirectly create economic or population growth, or the construction of additional housing, either directly or indirectly, in the surrounding environment. According to the CEQA Guidelines, such projects include those that would remove obstacles to population growth (e.g., a major expansion of a wastewater treatment plant) and projects that encourage and facilitate other activities that are beyond those proposed as part of the project

and could affect the environment are growth inducing. In addition, as set forth in the CEQA Guidelines, increases in the population may tax existing community service facilities, requiring construction of new facilities that could cause significant environmental effects. The CEQA Guidelines also state that it must not be assumed that growth in an area is necessarily beneficial, detrimental or of little significance to the environment. Induced growth is considered a significant impact only if it directly or indirectly affects the ability of agencies to provide needed public services or if it can be demonstrated that the potential growth, in some other way, significantly affects the environment, that is, that it would result in construction that would adversely affect the environment.

Factors that would potentially induce population growth include roads, highways, freeways, rail and other transportation improvements that provide access to previously undeveloped areas. The availability of adequate water supplies, the availability of sewage treatment facilities, the availabilities of developable land, the types and availability of employment opportunities, housing supply and costs, commuting distances, cultural and recreational amenities, climate, and local government growth policies contained in general plans and zoning ordinances would also induce population growth.

Because a number of variables influence growth, it is difficult to determine how Plan alone would affect growth. As described in Sections 3.1 through 3.18, the 2016 RTP/SCS would affect each of the categories described above directly through transportation projects and indirectly through land use strategies that would create a more compact development pattern than if no Plan were in place. The Plan would provide greater access to more of the region than the No Project Alternative due to transportation improvements; however targeting growth in the HQTAs would limit the geographic spread of growth. Nonetheless, the 2016 RTP/SCS could influence and possibly induce growth into specific areas of the region by providing new or expanded access. Overall, the 2016 RTP/SCS would accommodate and facilitate growth in the region.

5.4 IRREVERSIBLE DAMAGE FROM ENVIRONMENTAL ACCIDENTS

Implementation of projects included in the 2016 RTP/SCS would increase the potential for environmental impacts such as hazardous waste spills on freeways through the routine transport, use, or disposal of hazardous materials, and would increase the potential for other environmental accidents that have the potential to cause irreversible damage.

Another area of concern is the potential contamination of water quality throughout the region. During wet or rainy seasons, the precipitation runoff increases, which may lead to a greater decrease in water quality as a larger quantity of hazardous fluids can be transported to aquatic systems through sediments and/or plant materials. Development near known sources of moving water have a high potential from the direct release of oil, gasoline, or other hazardous mechanical fluids associated with general vehicles, large haul trucks or other public transit systems.

The SCAG region includes nearly 50 percent of the State's population and approximately 67 percent of the State's disadvantaged communities. In light of the approximately 23 percent of total statewide funding from the AHSC Program, SCAG plans to seek a fair share of funding in future rounds of cap and trade funding through implementation of the AHSC Program Action Plan, adopted by SCAG Regional Council in July 2015. 6.2 LEAD AGENCY

Southern California Association of Governments (SCAG)
818 West 7th Street, 12th Floor
Los Angeles, CA 90017

Contributor	Title
-------------	-------

Executive Management

Hasan Ikhata	Executive Director
Debbie Dillon	Deputy Executive Director
Huasha Liu	Director of Land Use and Environmental Planning
Joann Africa	Director of Legal Services
Naresh Amatya	Acting Director of Transportation Planning
Darin Chidsey	Director of Strategy, Policy & Public Affairs
Basil Panas	Chief Financial Officer
Catherine Kirschbaum	Chief Information Officer

Project Team

Ping Chang	Acting Manager, Compliance and Performance Monitoring
Lijin Sun	Senior Regional Planner
Roland Ok	Senior Regional Planner
Anita Au	Assistant Regional Planner
Rongsheng Luo	Program Manager
Justine Block	Deputy Legal Counsel, Legal Services
Patricia Chen	Special Counsel

Additional Review and Assistance

Frank Wen	Manager, Research and Analysis
Guoxiong Huang	Manager, Modeling and Forecasting
Sarah Jepson	Manager, Active Transportation and Special Programs
Jason Greenspan	Manager, Sustainability
Courtney Aguirre	Senior Regional Planner

6.3 PREPARERS OF THE PEIR

Sapphos Environmental, Inc.
430 North Halstead Street
Pasadena, California 91107

Contributor	Title	Area of Responsibility
Marie C. Campbell	President	Senior Project Manager
Eric Charlton	Senior Environmental Compliance Specialist	Project Manager EIR author
Lucy Lin	Director of Environmental Compliance	EIR author
David Lee	Biological Resources Manager	EIR author
Victoria Hsu	Environmental Compliance Specialist	EIR author
John Eggers	Environmental Compliance Coordinator	EIR author
Jeffrey Rex	Senior Environmental Compliance Specialist	EIR author
Laura Male	Senior Environmental Compliance Coordinator	EIR author
Karl Holland	Senior Cultural Resources Coordinator	EIR author
Lauren Dorough	Biological Resources Analyst	EIR author
Matthew Adams	Senior Technical Editor	Document production
Alexandria Lorenzana	Technical Editor	Document production
Noah Albers	Senior Geographical Information System (GIS) Specialist	GIS analysis and document production
Carli Ewert	GIS Specialist	GIS analysis and document production
Ann Espejo	GIS Specialist	GIS analysis and document production
Eugene Ng	Senior Graphics Specialist	Graphics and document production

SECTION 7.0 GLOSSARY

AB	Assembly Bill
ACE	After the Common Era
ACEP	Agricultural Conservation Easement Program
ACGIH	American Conference of Governmental Industrial Hygienists
ACHP	Advisory Council on Historic Preservation
ACM	Asbestos-Containing Materials
ACWA	Association of California Water Agencies
af	Acre-Feet
AFP 42	United States Air Force Plant 42
AFV	Alternative Fuel Vehicle
afy	Acre-Feet per Year
AHPA	Archeological and Historic Preservation Act
AHSC	Affordable Housing & Sustainable Communities
AIRFA	American Indian Religious Freedom Act
AMR	Annual Monitoring Report
APG	Adaptation Planning Guide
AQMP	Air Quality Management Plan
APS	Alternative Planning Strategy
ATMP	Airborne Toxic Control Measures
ARFVTP	Alternative and Renewable Fuel and Vehicle Technology Program
ARPA	Archaeological Resources Protection Act
ARRA	American Recovery and Reinvestment Act of 2009
ASBS	Areas of Special Biological Significance
ATP	California Active Transportation Program
ATSA	Aviation and Transportation Security Act
AVEK	Antelope Valley East Kern Water Agency
BCE	Before the Common Era
BGEPA	Bald and Golden Eagle Protection Act
BIA	Bureau of Indian Affairs
BLM	Bureau of Land Management
BMP	Best Management Practices
BNSF	Burlington Northern/Santa Fe Railway
BP	Before Present
BRT	Bus Rapid Transit
BSER	Best System Of Emission Reduction
BTSP	Bicycle Transportation Strategic Plan
Btu	British Thermal Units
BUR	Bob Hope Airport
CAA	Clean Air Act
CAAA	Clean Air Act Amendments
CAAQS	California Ambient Air Quality Standards
CAFÉ	Corporate Average Fuel Economy
CAL FIRE	California Department of Forestry and Fire Protection

Cal/EPA	California Environmental Protection Agency
CalARP	California Accidental Release Prevention
CalEMA	California Emergency Management Agency
CALGreen Code	California Green Building Standards Code Regulations
CalOES	Governor's Office of Emergency Services
CalRecycle	California Department of Resources Recycling and Recovery
Caltrans	California Department of Transportation
CARB	California Air Resources Board
CAT	Climate Action Team
CBSC	California Building Standards Code
CBSP	Commuter Bikeways Strategic Plan
CCA	California Coastal Act
CCAR	California Climate Action Registry
CCC	California Coastal Commission
CCR	California Code of Regulations
CDC	California Department of Conservation
CDE	California Department of Education
CDFW	California Department of Fish and Wildlife
CDP	Coastal Development Permit
CE	Common Era
CEC	California Energy Commission
CELCP	Coastal and Estuarine Land Conservation Program
CEP	Community Engagement Panel
CEQA	California Environmental Quality Act
CERC	Clean Energy Research Center
CERCLA	Comprehensive Response, Compensation, and Liability Act
CERCLIS	Comprehensive Environmental Response, Compensation, and Liability Information System
CFCP	California Farmland Conservancy Program
CFCs	Chlorofluorocarbons
CFS	Commodity Flow Survey
CGS	California Geological Survey
CH ₄	Methane
CHP	California Highway Patrol
CIP	Capital Improvement Program
CMA	Congestion Management Agency
CMP	Congestion Management Plan
CNDDB	California Natural Diversity Database
CNEL	Community noise equivalent level
CNG	Compressed Natural Gas
CNPS	California Native Plant Society
CO	Carbon Monoxide
CO ₂	Carbon Dioxide
CO _{2e}	Carbon Dioxide-Equivalent
COG	Orange County Council of Governments
COG	Council of Governments
CPUC	California Public Utilities Commission
CRHR	California Register of Historical Resources

CSE	Countywide Siting Element
CSI	California Solar Initiative
CSI	Container Security Initiative
CTIP	Cargo Theft Interdiction Program
CTP	California Transportation Plan
C-TPAT	Customs-Trade Partnership Against Terrorism
CUP	Conditional Use Permit
CVAG	Coachella Valley Association of Governments
CWA	Clean Water Act
CZMA	Coastal Zone Management Act
dB	Decibel
dba	A-Weighted Decibel
DBPs	Disinfection Byproducts
DDW	Division of Drinking Water
DFO	Disaster Field Office
DHS	United States Department of Homeland Security
DHS	Department of Homeland Security
DMA	Disaster Mitigation Act

NOVEMBER 24, 2015

Funding: The preparation of this report was financed in part through grants from the United States Department of Transportation (DOT).

The preparation of this report has been financed in part through grant[s] from the Federal Highway Administration and Federal Transit Administration, U. S. Department of Transportation. The contents of this report do not necessarily reflect the official views or policy of the U. S. Department of Transportation.

The contents of this report reflect the views of the author who is responsible for the facts and accuracy of the data presented herein. The contents do not necessarily reflect the official views or policies of SCAG or DOT. This report does not constitute a standard, specification or regulation.

NOTICE OF PREPARATION

TO: Interested Agencies, Organizations and Individuals

SUBJECT: Notice of Preparation of a Program Environmental Impact Report for the 2016-2040 Regional Transportation Plan/Sustainable Communities Strategy

DATE: March 9, 2015

LEAD AGENCY: Southern California Association of Governments
818 West Seventh Street, 12th Floor
Los Angeles, California 90017-3435

Main Office
818 West Seventh Street
12th Floor
Los Angeles, California

t (213) 236-1800
f (213) 236-1825
www.scag.ca.gov

The Southern California Association of Governments (SCAG), as Lead Agency, is publishing this Notice of Preparation (NOP) to prepare a Program Environmental Impact Report ("PEIR") in accordance with the California Environmental Quality Act (CEQA) for the 2016–2040 Regional Transportation Plan /Sustainable Communities Strategy ("2016 RTP/SCS" or the "Project").

This NOP has been prepared pursuant to Public Resources Code Section 21080.4 and CEQA Guidelines Sections 15082 and 15375. The purpose of this NOP is to notify local, state and federal agencies, and other interested agencies, organizations and individuals ("Interested Parties") that SCAG plans to prepare a PEIR for the 2016 RTP/SCS. For purposes of this NOP, Interested Parties include but are not limited to Responsible Agencies, Trustee Agencies, and the Governor's Office of Planning and Research as set forth under Section 15082 of the CEQA Guidelines.

SCAG is circulating this NOP to obtain input regarding the scope and content of the Draft PEIR for the 2016 RTP/SCS and on issues relevant to the 2016 RTP/SCS. The Project location, description, and the expected scope of environmental information and analysis are described on the following pages.

Two scoping meetings, each providing the same information, will be held at SCAG's Main Office (Los Angeles office, see above), Board Room, Tuesday, March 17, 2015, at 3 p.m. to 5 p.m.; and Wednesday, March 18, 2015, at 5 p.m. to 7 p.m. Videoconferencing will also be available from SCAG's regional offices (see last page for addresses).

To ensure full consideration of environmental issues with potential significant impacts in the Draft PEIR, **all comments must be received within thirty (30) days of the start of the 30-day public comment period, which begins March 9, 2015 and ends April 7, 2015.** If you wish to be placed on the mailing list to receive notices regarding the PEIR for the 2016 RTP/SCS, or have any questions or need additional information, please contact the person identified below. SCAG will accept **written comments** regarding this notice **through the close of business or no later than 5:00 p.m. on April 7, 2015.**

Please send written comments on this notice to **Ms. Lijin Sun, Senior Regional Planner**, to the address shown above or visit SCAG's website at <http://rtpscs.scag.ca.gov/2016PEIR>. For future coordination, please identify a point of contact of your agency and organization. Comments may also be submitted electronically to 2016PEIR@scag.ca.gov.

**NOTICE OF PREPARATION
DRAFT PROGRAM ENVIRONMENTAL IMPACT REPORT
2016–2040 REGIONAL TRANSPORTATION PLAN/SUSTAINABLE COMMUNITIES STRATEGY**

INTRODUCTION

The California Environmental Quality Act (“CEQA”, Pub. Res. Code § 21000 *et seq.*) and its implementing regulations (“CEQA Guidelines”, codified at 14 C.C.R. § 15000 *et seq.*) require the Southern California Association of Governments (“SCAG”) as the Lead Agency to prepare an Environmental Impact Report (“EIR”) for any discretionary government action, including programs and plans that may cause significant environmental effects. Specifically, the 2016–2040 Regional Transportation Plan (RTP)/Sustainable Communities Strategy (“SCS”) (“2016 RTP/SCS,” “Project,” or “Plan”) necessitates preparation of a Program EIR (“PEIR”), which is a “first-tier” CEQA document designed to consider “broad policy alternatives and program-wide mitigation measures” (*CEQA Guidelines* §15168). The PEIR for the 2016 RTP/SCS will provide an opportunity to inform decision-makers and the public about potential environmental effects associated with implementation of the 2016 RTP/SCS and Alternatives. The analysis provided in the PEIR will evaluate potential environmental effects, such as direct and indirect effects, growth-inducing impacts, and cumulative impacts of the 2016 RTP/SCS at a programmatic level; and will include program-level mitigation measures and performance standards to offset any identified potentially significant adverse programmatic level environmental effects. Potential or probable environmental effects of individual projects included in the 2016 RTP/SCS Project List would not be specifically analyzed in this PEIR. Project-level environmental analyses should appropriately be prepared by implementing agencies on a project-by-project or site-by-site basis as projects proceed through the design and decision-making process. The PEIR will provide a foundation for the subsequent, project- or site-specific environmental reviews that will be conducted by implementation agencies, as projects in the RTP/SCS are developed (*CEQA Guidelines* §15385).

This first-tier, programmatic environmental analysis for a long-range, regional-scale plan document will also help local agencies evaluate and reduce direct and indirect impacts, growth-inducing impacts, and cumulative environmental impacts with respect to local projects.

This Notice of Preparation (“NOP”) is prepared pursuant to Section 21080.4 and CEQA Guidelines Section 15082 and 15375. SCAG has determined that an Initial Study is not required to be prepared pursuant to CEQA Guidelines Section 15060(d). The NOP is intended to alert Interested Parties of the preparation of the 2016–2040 RTP/SCS PEIR. Comments regarding the PEIR received during the 30-day NOP review period will be used to refine the scope and content of the Draft PEIR, as appropriate.

PROJECT LOCATION AND BACKGROUND

Project Location

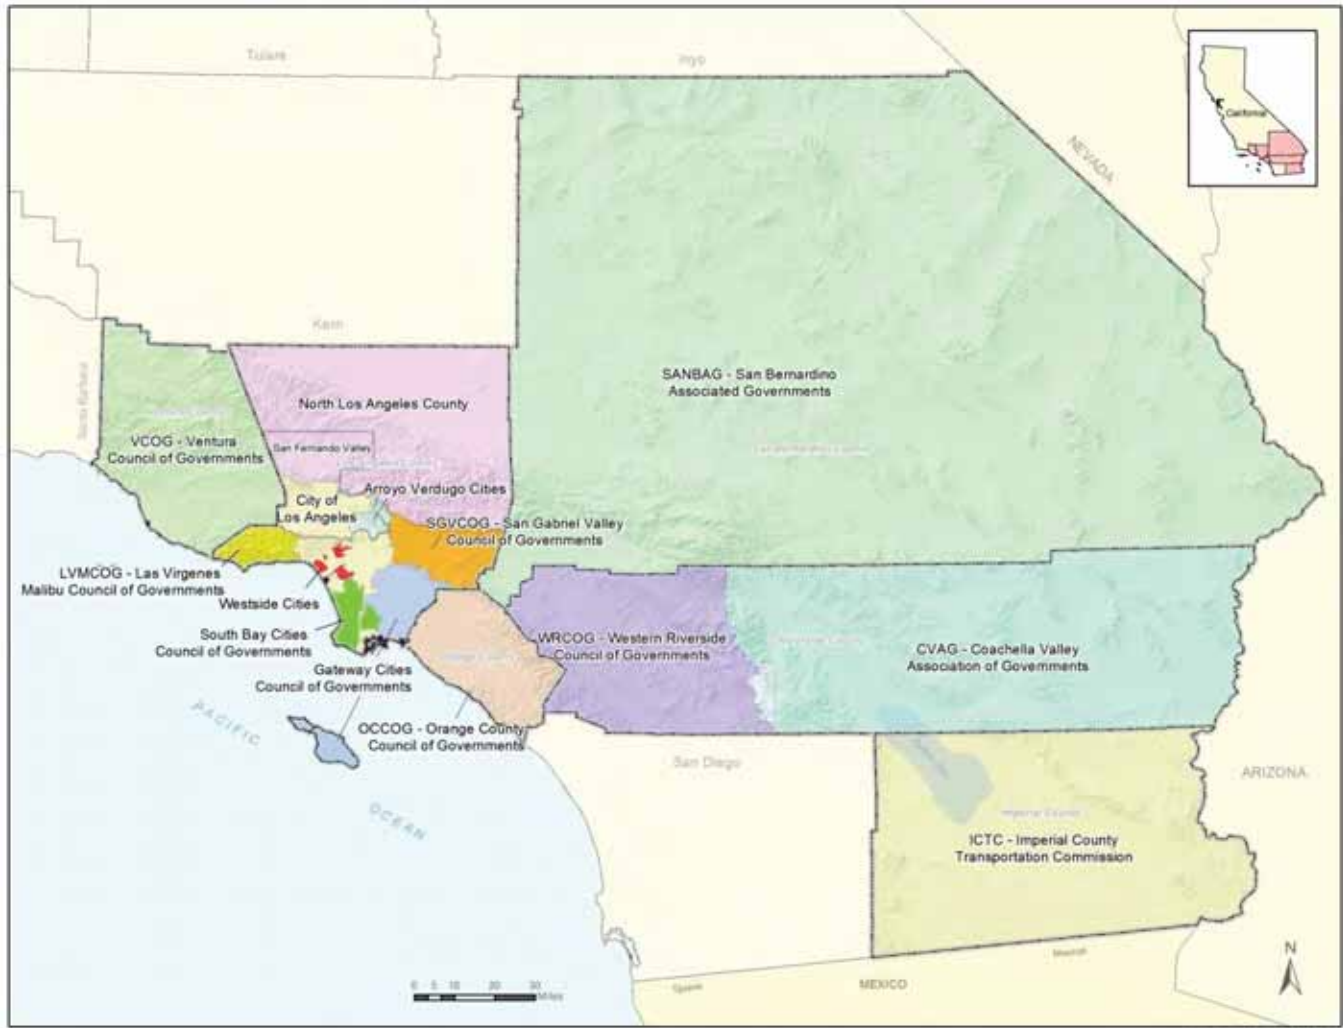

SCAG is the federally designated Metropolitan Planning Organization (“MPO”) under Title 23, United States Code (U.S.C.) 134(d)(1). SCAG is a six-county region that includes the counties of Imperial, Los Angeles, Orange, Riverside, San Bernardino, and Ventura, and 191 cities (Figure 1, *SCAG Region*). To the north of the SCAG region are the counties of Kern and Inyo; to the east is State of Nevada and State of Arizona; to the south is the U.S.-Mexico border; to the west is the county of San Diego; and to the northwest is the Pacific Ocean. The SCAG region also consists of 15 subregional entities that have been recognized by the Regional Council, SCAG’s governing body, as partners in the regional policy planning process (Figure 2, *SCAG Subregions*).

SCAG is one of the 18 MPOs in the State of California. The total area of the SCAG region is approximately 38,000 square miles. The region includes the county with the largest land area in the nation, San Bernardino County, as well as the county with the highest population in the nation, Los Angeles County. The SCAG region is home to approximately 19 million people, or 49 percent of California's population, representing the largest and most diverse region in the country.

Figure 1: SCAG Region

Figure 2: SCAG Subregions

SCAG Roles and Responsibilities

In addition to the federal designation as a MPO, SCAG is designated under California state law as the Multicounty Designated Transportation Planning Agency and Council of Governments (COG) for the six-county region. Founded in 1965, SCAG is a Joint Powers Authority, established as a voluntary association of local governments and agencies.

SCAG serves as the regional forum for cooperative decision making by local government elected officials and its primary responsibilities in fulfillment of federal and state requirements include the development of the Regional Transportation Plan and Sustainable Communities Strategy (RTP/SCS); the Federal Transportation Improvement Program (FTIP); the annual Overall Work Program; and transportation-related portions of local air quality management plans. SCAG's other major functions include determining the regional transportation plans and programs are in conformity with state air quality plans; periodic preparation of a Regional Housing Needs Assessment (RHNA); and intergovernmental review of regionally significant projects.

Regional Cooperation and Subregions

SCAG places great importance on local input in the regional planning process. SCAG seeks feedback from local elected officials and their staff through 15 subregional organizations that have been recognized by the Regional Council as partners in the regional policy planning process (Figure 2). The subregional organizations represent various parts of the SCAG region that have identified themselves as having common interests and concerns. The subregions vary according to geographical size, number of local member jurisdictions, staffing, decision-making structure, and legal status.

SCAG provides opportunities to participate in regional planning through collaboration and participation in regional programs and dialogs. Responsible for regional policy direction and review, standing committees at SCAG include the Executive/Administration Committee, the Regional Council, the Transportation Committee, the Community, Economic & Human Development Committee, the Energy & Environmental Committee, and Legislative/Communication & Membership Committee. In addition to the standing committees, there are various subcommittees, technical advisory committees, working groups, and task forces that report to the standing committees, while other groups are established on an ad hoc basis to assist with specific projects or address specific regional policy. The Regional Council is SCAG's governing body. It consists of 86 elected officials, representing cities, counties, county transportation commissions, transportation corridor agencies, tribal governments, and air districts in the region. The Regional Council has general authority to conduct the affairs of SCAG and directs the actions of the agency throughout the year. Additionally, the Regional Council implements the policy direction provided at the annual General Assembly of the membership, acts upon policy recommendations from SCAG's standing policy committees and external agencies, and appoints standing or ad-hoc subcommittees to study specific programs or issues.

Regional Transportation Plan/Sustainable Communities Strategy

SCAG is required to adopt and update a long-range regional transportation plan every four (4) years, in accordance with federal and state transportation planning laws. The regional transportation plan (RTP) is used to guide the development of the Federal Transportation Improvement Program (FTIP) as well as other transportation programming documents and plans. The RTP outlines the region's goals and policies for meeting current and future mobility needs, providing a foundation for transportation decisions by local, regional and state officials that are ultimately aimed at achieving a coordinated and balanced transportation system. The RTP identifies the region's transportation needs and issues, sets forth actions, programs, and a plan of projects to address the needs consistent with adopted regional policies and goals, and documents the financial resources needed to implement the RTP.

Transportation investments in the SCAG region that receive state and federal funds or require federal approvals must be consistent with the RTP and must be included in SCAG's FTIP when funded. The FTIP covers six years and is updated biennially on an even-year cycle. It represents the immediate, near-term commitments of the RTP. SCAG does not implement individual projects in the RTP, as these projects will be implemented by local and state jurisdictions, and other agencies.

Moving Ahead for Progress in the 21st Century Act (MAP-21), enacted into law on July 6, 2012, sets forth a performance-based approach requiring the State and MPOs to set performance targets and track their progress in achieving those targets relative to past system performance. While the federal rules governing performance targets are not yet enacted, it is SCAG's intent to utilize a performance-based approach in preparing the 2016 RTP/SCS.

Further, MAP-21 continues to require, as under prior planning law, that "a long-range transportation plan shall include a discussion of the types of potential environmental mitigation activities and potential areas to carry out

these activities, including activities that may have the greatest potential to restore and maintain the environmental functions affected by the plan.” 23 U.S.C. § 134(i)(2)(B). Consultation and public outreach activities are a part of the 2016 RTP/SCS and PEIR development processes, and will be undertaken to the maximum extent practicable and feasible. SCAG is coordinating efforts to comply with MAP-21 planning requirements with efforts undertaken through the CEQA process. As such, particular emphasis in the RTP/SCS will be placed on these planning requirements, including those that prescribe coordinated planning and consideration of environmental resources. In addition, pursuant to Title VI of the Civil Rights Act of 1964 and Presidential Order 12898, the 2016 RTP/SCS includes an environmental justice analysis. The 2016 RTP/SCS will analyze how the benefits and burdens of transportation investments are distributed among minority and low-income populations in the SCAG region. Outreach efforts are underway to reach environmental justice communities during development of the 2016 RTP/SCS.

SCAG is also required to prepare a RTP pursuant to Section 65080 of the California Government Code. The State requirements largely mirror the federal requirements and require each transportation planning agency in urban areas to adopt and submit an updated RTP to the California Transportation Commission (CTC) and the California Department of Transportation (Caltrans) every four (4) years. To ensure a degree of statewide consistency in the development of RTPs, the CTC under Government Code Section 14522 prepared RTP Guidelines. The adopted guidelines include a requirement for program level performance measures, which include objective criteria that reflect the goals and objectives of the RTP. In addition, the initial years of the plan must be consistent with the FTIP.

State planning law further requires, pursuant to the Sustainable Communities and Climate Protection Act of 2008 (“SB 375”) that the RTP include a Sustainable Communities Strategy (SCS) component to reduce greenhouse gas (GHG) emissions from passenger vehicles (automobiles and light-duty trucks). SB 375 is part of California’s overall strategy to reach GHG emissions reduction goals required by Assembly Bill (AB) 32, by promoting integrated transportation planning with the goal of creating more sustainable communities.

Pursuant to SB 375, SCAG’s SCS is required to meet reduction targets for greenhouse gas (GHG) emissions by 8 percent per capita by 2020 and 13 percent per capita by 2035 compared to 2005, as set by the California Air Resources Board (ARB). According to Section 65080(b)(2)(B) of the California Government Code, the SCS must:

- Identify existing land use;
- Identify areas to accommodate long-term population growth;
- Identify areas to accommodate an eight-year projection of regional housing needs;
- Identify transportation needs and the planned transportation network,
- Consider resource areas and farmland;
- Consider state housing goals and objectives;
- Set forth a forecasted growth and development pattern; and
- Comply with federal law for developing an RTP.

The SCS outlines SCAG’s plan for attaining the GHG emissions reductions targets set forth by ARB, by integrating the transportation network and related strategies with a forecasted land use pattern that responds to projected growth, housing needs and changing demographics, and transportation demands.

In addition, SCAG is required to submit to ARB the SCS developed as part of the RTP for the purpose of determining whether the GHG emissions reduction targets have been met. Furthermore, SB 375 specifically states that the SCS developed as part of the RTP cannot dictate local General Plan policies. Rather, SB 375 is intended to provide a regional policy foundation that local government may build upon if they so choose and generally includes the quantitative growth projections from each city and county in the region going forward.

Qualifying projects that meet criteria established by SB 375, and are consistent with the SCS are eligible for streamlined environmental review under CEQA.¹

PROJECT DESCRIPTION

The RTP/SCS is a long-range transportation plan that provides a vision for regional transportation investments over a 20-year period. In accordance with applicable federal and state laws, SCAG updates the RTP/SCS every four (4) years to reflect changes to the transportation network, the most recent planning assumptions, economic trends, and population and jobs growth forecasts.²

The RTP/SCS is developed and implemented through a collaborative, continuous and coordinated process that involves key stakeholders such as the six County Transportation Commissions (CTCs), Caltrans, transit operators, airport and port authorities, air districts and other agencies including local jurisdictions in our region. The 2016 RTP/SCS will be the culmination of a multi-year effort, which was initiated since the adoption of the 2012 RTP/SCS. For more information on the 2012 RTP/SCS, please visit SCAG's website, at <http://rtpscsc.scag.ca.gov/2012RTPSCS>. The 2016 RTP/SCS will largely embody the goals, objectives, and transportation improvements that have been considered in the adopted 2012 RTP/SCS, last amended in September 2014 (Amendment No. 2 to the 2012 RTP/SCS). For more information on the Amendment No. 2 to the 2012 RTP/SCS and the projects that were documented in the Project List of the 2012 RTP/SCS Amendment No. 2, please visit SCAG's website, at <http://rtpscsc.scag.ca.gov/Pages/Amendment-2.aspx>.

As a blueprint for the region's growth through 2040, the 2016 RTP/SCS will outline the region's goals, policies, and strategies that improve the balance between land use and transportation systems, both current and future. It integrates the multi-modal transportation network and related strategies with an overall land use pattern that responds to projected population and employment growth, housing needs and changing demographics, and transportation demands, including transit and active transportation. It outlines improvements to the existing transportation system, as well as the strategic expansion of the transportation system. While SB 375 places a great deal of attention on meeting GHG emission reduction targets set forth by ARB, SCAG has also established other important goals that are aimed to improving the overall quality of life in the region. The 2016 RTP/SCS is currently anticipated to build from the foundation of the adopted 2012 RTP/SCS, as amended in September 2014, as the baseline scenario to be utilized to review the progress in implementing strategies identified in the 2012 RTP/SCS.

2016 RTP/SCS Vision

Based upon extensive local collaboration, the 2016 RTP/SCS will contain projects, policies and strategies with the intent of achieving a range of quality of life outcomes. The 2016 RTP/SCS is intended to identify reasonably available sources of funding over the plan period, and allocate these funds to transportation projects and programs that benefit the SCAG communities and residents. The 2016 RTP/SCS will be designed to assure that, to the greatest extent possible, the money invested would have the best chance of achieving the objectives communities and residents care about. As such, the 2016 RTP/SCS, as currently envisioned by SCAG, will

¹ CEQA streamlining provisions are also available for eligible projects meeting the criteria established by Senate Bill 226 (Simitian, 2011), CEQA Guidelines Section 15183.3 (Streamlining for Infill Projects) and for eligible projects meeting the criteria established by Senate Bill 743 (Steinberg, 2013), Public Resources Code Section 21155.4 (Exemptions).

² The SCAG region encompasses 17 federally designated non-attainment and maintenance areas for air quality standards, pursuant to the federal Clean Air Act. The U.S. Department of Transportation (USDOT), Federal Highway Administration (FHWA) and the Federal Transit Administration (FTA) under Section 176(c) of the Federal Clean Air Act [42 U.S.C. 7506(c)] require that for a non-attainment area, air quality conformity determinations on updated transportation plans and programs must be made every four (4) years.

continue on a meaningful path towards advancing mobility, sustainability and economic growth as set forth in the 2012 RTP/SCS.³

Mobility

A successful transportation plan will allow the future residents of the region to access daily needs, including work, school, shopping, transit, and recreation without undue burdens of cost, time, or physical danger. This includes the pressing need to preserve and maintain infrastructure at adequate levels. Residents should be able to rely on their ability to get from one place in the region to another, timely and safely. They should be able to choose from a variety of transportation modes that suit their preferences and needs, including non-automobile modes, such as walking and biking that allow for physical activity.

As currently envisioned, the 2016 RTP/SCS will continue to promote active transportation options, improve accessibility and increase proximity to recreation, public services, community amenities, transit, and other transportation facilities, and ensure safety.

Sustainability

Building off the foundation of the 2012 RTP/SCS, the 2016 RTP/SCS is intended to include strategies linking future regional transportation and land use planning with the goal of promoting sustainability. This integrated development pattern forecasted for the 2016 RTP/SCS will be used to demonstrate that the SCAG region is expected to achieve the GHG emissions reduction targets required under SB 375.

The 2016 RTP/SCS will define sustainability in the broadest way possible. It will allow future residents to enjoy equal or better quality of life than today, including the ability to lead a healthy lifestyle, enjoy clean air and water, ample opportunities for active transportation, open space, recreation, public services, community amenities, physical activities, and housing choices for all income levels. In light of the recent economic downturn and recovery, the 2016 RTP/SCS will lay a path for the region's continued economic growth and sustainability by providing strategies that create jobs and attract additional businesses to Southern California communities. Moreover, policies and programs that will be included as part of the 2016 RTP/SCS are anticipated to create direct and substantial benefits to public health by reducing pollutant emissions and expanding the opportunities for active transportation.

Economy

A successful RTP/SCS creates opportunities for business, investment, and employment in Southern California. The 2012 RTP/SCS did so by identifying over \$524 billion of investment in a 25 year period. This includes the direct economic effect of designing, building, and maintaining projects, as well as the indirect and induced benefits of the investments. Moreover, the economic benefits of the RTP/SCS are likely far broader and greater. The investments and strategies in the draft RTP/SCS will set the conditions for economic activity in the region by improving mobility and reducing congestion and commute times, allowing businesses in the region to operate more efficiently and maintain their competitiveness. Also, by identifying areas to accommodate regional housing needs the RTP/SCS strives to provide residents with better access to affordable housing in all communities, and lower overall combined costs for housing and transportation. In more subtle ways, the RTP/SCS encourages continued investment and job creation by ensuring a more livable, efficient, desirable, and competitive region where employers want and are able to do business over the long term.

³ Southern California Association of Governments. April 2012. *2012-2035 Regional Transportation Plan/Sustainable Communities Strategy*. Page 11. Available at: <http://rtpscscag.ca.gov/Documents/2012/final/f2012RTPSCS.pdf>

2016 RTP/SCS Goals

The RTP/SCS goals demonstrate the need to balance many priorities in the most cost-effective manner. As currently being envisioned, the goals of the 2016 RTP/SCS are expected to remain substantively the same as the goals established in the 2012 RTP/SCS, adopted by SCAG's Regional Council in April 2012⁴:

- Maximize mobility and accessibility for all people and goods in the region
- Ensure travel safety and reliability for the people and goods in the region
- Preserve and ensure a sustainable regional transportation system
- Maximize the security of the regional transportation system through improved monitoring, recovery planning, and coordination with other security agencies
- Maximize the productivity of our transportation system
- Protect the environment, improve air quality and promote energy efficiency
- Encourage land use and growth patterns that complement our transportation investments

In addition to meeting the GHG emissions reduction targets that the ARB has set for the SCAG region pursuant to SB 375, SCAG intends to address the goals set forth in Executive Order S-3-05 (to reduce GHG emissions to 1990 levels by 2020, and to reduce GHG emissions to 80 percent below 1990 levels by 2050).

2016 RTP/SCS Policies and Performance Measures

The 2016 RTP/SCS is currently being envisioned to include a set of guiding policies that focus future investments on the best-performing projects and strategies that seek to preserve, maintain, and optimize the performance of the existing transportation system. As set forth in the 2012-2035 RTP/SCS⁵, these policies will include the following and are intended to help track how well the region is performing in relation to a broad range of goals and objectives.

- Transportation investments shall be based on SCAG's adopted Regional Performance Indicators.
- Ensuring safety, adequate maintenance, and efficiency of operations on the existing multi-modal transportation system should be the highest RTP priorities for any incremental funding in the region.
- RTP land-use and growth strategies in the RTP will respect local input and advance smart growth initiatives.
- Transportation Demand Management (TDM) and non-motorized transportation will be focus areas.
- High-Occupancy Vehicle (HOV) gap closures that significantly increase transit and rideshare usage will be supported and encouraged.
- Monitoring progress on all aspects of the Plan, including the timely implementation of projects, programs, and strategies, will be an important and integral component of the 2016 Plan.

Consistent with the goals and performance-based transportation planning approach set forth under MAP-21, performance measures will play a critical role in the development of the 2016 RTP/SCS. Performance measures are intended to help quantify regional goals, estimate the impacts of proposed investments, and evaluate progress over time. SCAG intends to build upon and update the performance measures developed for the 2012 Plan⁶ in the 2016 RTP/SCS. This way, there is consistency when tracking and assessing the region's performance and whether the region is progressing towards meeting and exceeding federal and state requirements.

⁴ Id. at page 13.

⁵ Id. at page 15.

⁶ Id. at page 15.

The 2016 RTP/SCS is currently being envisioned to include a set of key categories of performance measures as follows:

- Location efficiency
- Mobility and accessibility
- Safety and health
- Environmental quality
- Economic well-being
- Investment effectiveness
- System sustainability

Preliminary 2016 RTP/SCS Scenario Planning Matrix

As part of the 2016 RTP/SCS planning process, SCAG is developing a suite of transportation and land use scenarios for public consideration. These scenarios focus on transportation and land use related inputs that are modified to vary across four (4) scenarios. The purpose of developing scenarios is to provide an analytical technique to layout the policy choices to be considered as the 2016 RTP/SCS is developed. The Preliminary 2016 RTP/SCS Scenario Planning Matrix outlines a number of plan elements that together build a framework for comparing potential regional scale choices on issues such as land use development patterns, transportation investments, transportation demand management/transportation system management (TDM/TSM), and technological innovations. Policy considerations currently outlined in the Preliminary Scenario Planning Matrix include land use, housing, farm and natural lands, roadway and highway network, transit, active transportation, technology/innovation, and TDM/TSM. Scenarios will be analyzed and compared using outputs from SCAG regional transportation model, Scenario Planning Model, or off-model analysis. The outputs from these modeling analyses will help illustrate variations between scenarios and policy elements at the regional scale for metrics such as public health, mobility, accessibility, and sustainability.

For more information on the Preliminary 2016 RTP/SCS Scenario Planning Matrix, please visit SCAG's website, at: <http://www.scag.ca.gov/committees/CommitteeDocLibrary/oscwg021915draftscenario.pdf>.

Bottom-up Local Growth and Land Use Input Process

A critical component to developing a successful 2016 RTP/SCS is the participation and cooperation of all local government partners and stakeholders within the SCAG region. To this end, SCAG uses a bottom-up local input process by which all local governments are informed of the 2016 RTP/SCS planning process and have clear and adequate opportunities to provide input. Growth forecasts and land use updates for development of the 2016 Plan have been developed through this bottom-up local input process, including: 1) extensive, ongoing communication with SCAG partners and stakeholders on growth forecast and land use updates throughout the region; 2) implementation of a formal protocol to guide the communication between SCAG staff and local jurisdiction regarding the input and review process; 3) flexibilities in providing official input to SCAG through the use of a Data Verification and Approval Form; 4) adoption of a resolution designating a staff position at the local government level to add clarity and accountability to the process; and 5) development of an automated mapping workflow and a digitalized land use database in a geographic information system (GIS) format to facilitate the review and input process.

RTP/SCS Public Participation Plan and Process

Another key aspect of the 2016 RTP/SCS plan development is public participation. To provide early and meaningful public participation in the Plan's development and decision-making processes, SCAG has developed

and adopted a Public Participation Plan (“PPP”).⁷ The adoption of the PPP has demonstrated SCAG’s commitment in increasing awareness and involvement of interested persons in SCAG’s governmental processes and regional transportation and land use planning. SCAG is committed to providing information and timely public notice, ensuring full public access to key decisions, and supporting early and continuing public involvement in the development of the 2016 RTP/SCS. To this end, SCAG will continue to engage a wide range of stakeholder groups, elected officials, special interest groups, the general public, and other interested parties through a series of workshops and public meetings, as well as SCAG’s policy committees, task forces, and subcommittee structure during the development of the 2016 RTP/SCS and its associated CEQA review process.

SCOPE OF ENVIRONMENTAL ANALYSIS IN THE PEIR

The PEIR to be prepared for the 2016 RTP/SCS analyzes potential effects that the 2016 RTP/SCS may cause on the environment. Although the 2016 RTP/SCS includes individual transportation projects, the associated PEIR is programmatic in nature and does not specifically analyze potential environmental effects that any of the individual transportation projects may cause. Project-level environmental impact analyses will need to be prepared by implementing agencies on a project-by-project basis as projects proceed through the design and decision-making process. Project-specific planning and implementation undertaken by each project sponsor/implementing agency will depend on a number of issues, including: policies, programs and projects adopted at the local level; restrictions on federal, State and local transportation funds; the results of feasibility studies for particular corridors; and project-specific environmental review.

Potential scope of environmental effects that warrant analysis and consideration in the 2016 RTP/SCS Draft PEIR are as follows:

- Aesthetics and Views
- Agriculture and Forestry Resources
- Air Quality
- Biological Resources and Open Space
- Cultural Resources
- Energy
- Geology, Soils and Mineral Resources
- Greenhouse Gas Emissions and Climate Change
- Hazards and Hazardous Materials
- Hydrology and Water Resources
- Land Use and Planning
- Noise
- Population, Employment, and Housing
- Recreation
- Transportation, Traffic, and Safety
- Public Services and Utilities

PRELIMINARY 2016 RTP/SCS ALTERNATIVES

It is anticipated that the PEIR will evaluate at least three potential alternatives to the 2016 RTP/SCS as follows: (1) No Project; (2) Refined 2012 RTP/SCS Alternative; and (3) Intensified Transportation and Land Use Integration Alternative. These alternatives will evaluate various planning scenarios capable of achieving most of the basic objectives of the 2016 RTP/SCS. More specifically, each Alternative, except the No Project Alternative, will include a range of policies and projects including, but not limited to, variations in land use density and intensity, transit and rail systems, active transportation, highway/roadway construction and widening and transportation demand/system management.

SCAG has the discretion to select one alternative in its entirety or to combine elements of various alternatives to complete the PEIR for the RTP/SCS. The development of alternatives in a PEIR is focused on avoiding or reducing potentially significant impacts of the 2016 RTP/SCS. Therefore, detailed alternative descriptions are normally

⁷ Southern California Association of Governments. Public Participation Plan. Adopted April 3, 2014. http://www.scag.ca.gov/Documents/PPP2014_Adopted-FINAL.pdf

developed as impacts of a project are identified through the PEIR process.

No Project Alternative

The No Project Alternative is required by Section 15126.6(e)(2) of the CEQA Guidelines and assumes that the proposed project would not be implemented. The No Project Alternative will consider continued implementation of the goals and policies of the adopted 2012 RTP/SCS, as amended in September 2014. The No Project Alternative includes those transportation projects that are included in the first year of the previously conforming RTP/SCS and/or FTIP, or those that have completed environmental review by December 2014. The growth scenario included in the No Project Alternative is based on the 2012 RTP/SCS regional population, housing and employment totals.

Refined 2012 RTP/SCS Alternative

A Refined 2012 RTP/SCS Alternative would include the most recent growth forecast data, including local input on land use, employment, population, and housing data, and new input on transportation projects from the County Transportation Commissions in the SCAG region. This Alternative will consider continued implementation of the policies, strategies and projects included in the 2012 RTP/SCS.

Intensified Transportation and Land Use Integration Alternative

An Intensified Transportation and Land Use Integration Alternative would focus on analyzing more intensified integration of transportation and land use projects and policies aimed at further reducing vehicle miles traveled and GHG and criteria pollutant emissions to improve mobility, accessibility, and sustainability. This Alternative could include more mixed-use, infill development, increased densities in urban cores, new technological innovations, and/or additional transit and active transportation strategies.

SCAG is seeking input on the alternatives through the scoping process which could result in modifications to the number, content and scope of alternatives analyzed in the PEIR. Furthermore, the PEIR will identify all alternatives that were initially considered, but rejected for reasons including infeasibility or inability for a particular alternative to meet the Project objectives or reduce environmental impacts beyond that of the Project.

SCOPING MEETINGS

SCAG will host two (2) scoping meetings during the 30-day public comment period that **begins March 9, 2015 and ends April 7, 2015** to review the various proposed Project elements and solicit information and comments in relation to this Notice and the CEQA analysis for the proposed Project. The two (2) scoping meetings, each providing the same information, will take place **on Tuesday, March 17, 2015, from 3 p.m. to 5 p.m., and on Wednesday, March 18, 2015, from 5 p.m. to 7 p.m., at SCAG Los Angeles (Main) office board room, located at 818 West 7th Street, 12th Floor, Los Angeles, California 90017.** For each of the two scoping meetings, videoconferencing is made available from the other sites, as listed below.

Subject: Program Environmental Impact Report for the 2016-2040 Regional Transportation/Sustainable Communities Strategy

Dear Ms. Sun:

The Antelope Valley Air Quality Management District (AVAQMD) has received the request for comments for the Program Environmental Impact Report for the 2016-2040 Regional Transportation / Sustainable Communities Strategy (RTP/SCS). The RTP/SCS is a long-range transportation plan that provides for a vision for regional transportation investments over a 20-year period. The RTP/SCS is updated every four years to reflect changes to the transportation network, the most recent planning assumptions, economic trends, and population and jobs growth forecasts.

The AVAQMD has reviewed the Notice of Preparation for the RTP/SCS and concurs with the proposed analysis of potential impacts in the Air Quality section. AVAQMD Designations and Classifications are available at <http://www.avaqmd.ca.gov/Modules/ShowDocument.aspx?documentid=2908>.

If you have any questions regarding this letter, please contact me at (661) 723-8070 x2.

Sincerely,

A handwritten signature in black ink, appearing to read "Bret Banks", written over a white background.

**Subject: Comments on the Notice of Preparation of a Program Level Draft
Environmental Impact Report for the 2016 – 2040 Regional Transportation
Plan/Sustainable Communities Strategy; Los Angeles, Orange, Riverside, San
Bernardino, and Ventura Counties; SCH# 2015031035**

Dear Ms. Sun:

The California Department of Fish and Wildlife (Department), South Coast Region 5, has reviewed the 2016 – 2040 Regional Transportation Plan/Sustainable Communities Strategy (RTP/SCS) Notice of Preparation (NOP) for a Draft Program Environmental Impact Report (DPEIR). The 2016 RTP/SCS, if approved by the Southern California Association of Governments (SCAG), will implement a long-range transportation plan that provides a vision for regional transportation investments over a 20-year period. SCAG updates the RTP/SCS every four years to reflect changes to the transportation network, the most recent planning assumptions, economic trends, and population and jobs growth forecasts.

The 2016 RTP/SCS would occur primarily in a six -county region that includes the counties of Imperial, Los Angeles, Orange, Riverside, San Bernardino, and Ventura, and in 191 cities and 15 subregional entities within these counties. Subsequent activities or projects conducted under the 2016 RTP/SCS will require further CEQA analysis and may be noticed under separate CEQA documents.

The following comments and recommendations have been prepared pursuant to the Department's authority as a Responsible Agency under CEQA Guidelines section 15381 over those aspects of the proposed project that come under the purview of the California Endangered Species Act (Fish and Game Code § 2050 *et seq.*) and Fish and Game Code section 1600 *et seq.*, and pursuant to our authority as Trustee Agency with jurisdiction over natural resources affected by the project (California Environmental Quality Act, [CEQA] Guidelines § 15386) to assist the Lead Agency in avoiding or minimizing potential project impacts on biological resources.

Specific Comments

Program Level Review Considerations - Realizing that the project is a Program Level planning document, the Department recommends that the DPEIR include descriptions on how the project will address the below general comments at the Program level to maximize consideration for biological resources during subsequent project reviews and to ensure that these reviews are consistent with the project's planning intent.

General Comments

- 1) Project Description and Alternatives. To enable the Department to adequately review and comment on the proposed project from the standpoint of the protection of plants, fish, and wildlife, we recommend the following information be included in the DEIR:
 - a) A complete discussion of the purpose and need for, and description of, the proposed project, including all staging areas and access routes to the construction and staging areas; and,
 - b) A range of feasible alternatives to project component location and design features to ensure that alternatives to the proposed project are fully considered and evaluated. The alternatives should avoid or otherwise minimize direct and indirect impacts to sensitive biological resources and wildlife movement areas.

- 2) Lake and Streambed Alteration Agreements (LSA). As a Responsible Agency under CEQA Guidelines section 15381, the Department has authority over activities in streams and/or lakes that will divert or obstruct the natural flow, or change the bed, channel, or bank (including vegetation associated with the stream or lake) of a river or stream, or use material from a streambed. For any such activities, the project applicant (or "entity") must provide written notification to the Department pursuant to section 1600 et seq. of the Fish and Game Code. Based on this notification and other information, the Department determines whether a Lake and Streambed Alteration Agreement (LSA) with the applicant is required prior to conducting the proposed activities. The Department's issuance of a LSA for a project that is subject to CEQA will require CEQA compliance actions by the Department as a Responsible Agency. As a Responsible Agency, the Department may consider the Negative Declaration or Environmental Impact Report of the local jurisdiction (Lead Agency) for the project. To minimize additional requirements by the Department pursuant to section 1600 et seq. and/or under CEQA, the document should fully identify the potential impacts to the stream or riparian resources and provide adequate avoidance, mitigation, monitoring and reporting commitments for issuance of the LSA.¹
 - a) The project area supports aquatic, riparian, and wetland habitats; therefore, a preliminary jurisdictional delineation of the streams and their associated riparian habitats should be included in the DEIR. The delineation should be conducted pursuant to the U. S. Fish and Wildlife Service wetland definition adopted by the Department.² Some wetland and riparian habitats subject to the Department's authority may extend beyond the jurisdictional limits of the U.S. Army Corps of Engineers' Section 404 permit and Regional Water Quality Control Board Section 401 Certification.
 - b) In project areas which may support ephemeral streams, herbaceous vegetation, woody vegetation, and woodlands also serve to protect the integrity of ephemeral channels and

¹ A notification package for a LSA may be obtained by accessing the Department's web site at www.wildlife.ca.gov/habcon/1600.

² Cowardin, Lewis M., et al. 1970. Classification of Wetlands and Deepwater Habitats of the United States. U.S. Department of the Interior, Fish and Wildlife Service.

help maintain natural sedimentation processes; therefore, the Department recommends effective setbacks be established to maintain appropriately-sized vegetated buffer areas adjoining ephemeral drainages.

- c) Project-related changes in drainage patterns, runoff, and sedimentation should be included and evaluated in the environmental document.
- 3) Wetlands Resources. The Department, as described in Fish & Game Code § 703(a) is guided by the Fish and Game Commission's policies. The Wetlands Resources policy (<http://www.fgc.ca.gov/policy/>) of the Fish and Game Commission "...seek[s] to provide for the protection, preservation, restoration, enhancement and expansion of wetland habitat in California. Further, it is the policy of the Fish and Game Commission to strongly discourage development in or conversion of wetlands. It opposes, consistent with its legal authority, any development or conversion which would result in a reduction of wetland acreage or wetland habitat values. To that end, the Commission opposes wetland development proposals unless, at a minimum, project mitigation assures there will be "no net loss" of either wetland habitat values or acreage. The Commission strongly prefers mitigation which would achieve expansion of wetland acreage and enhancement of wetland habitat values".
- a) The Wetlands Resources policy provides a framework for maintaining wetland resources and establishes mitigation guidance. The Department encourages avoidance of wetland resources as a primary mitigation measure and discourages the development or type conversion of wetlands to uplands. The Department encourages activities that would avoid the reduction of wetland acreage, function, or habitat values. Once avoidance and minimization measures have been exhausted, the project must include mitigation measures to assure a "no net loss" of either wetland habitat values, or acreage, for unavoidable impacts to wetland resources. Conversions include, but are not limited to, conversion to subsurface drains, placement of fill or building of structures within the wetland, and channelization or removal of materials from the streambed. All wetlands and watercourses, whether ephemeral, intermittent, or perennial, should be retained and provided with substantial setbacks, which preserve the riparian and aquatic values and functions for the benefit to on-site and off-site wildlife populations. The Department recommends mitigation measures to compensate for unavoidable impacts be included in the DEIR and these measures should compensate for the loss of function and value.
- b) The Fish and Game Commission's Water policy guides the Department to [insure] the quantity and quality of the waters of this state should be apportioned and maintained respectively so as to produce and sustain maximum numbers of fish and wildlife; to provide maximum protection and enhancement of fish and wildlife and their habitat; encourage and support programs to maintain or restore a high quality of the waters of this state, and prevent the degradation thereof caused by pollution and contamination; and endeavor to keep as much water as possible open and accessible to the public for the use and enjoyment of fish and wildlife. The Department recommends avoidance of water practices and structures that use excessive amounts of water, and minimization of impacts that negatively affect water quality, to the extent feasible.
- 4) California Endangered Species Act (CESA). The Department considers adverse impacts to a species protected by CESA, for the purposes of CEQA, to be significant without mitigation. As to CESA, take of any endangered, threatened, candidate species, or state-listed rare

plant species that results from the Project is prohibited, except as authorized by state law (Fish and Game Code, §§ 2080, 2085; Cal. Code Regs., tit. 14, §786.9). Consequently, if the Project, Project construction, or any Project-related activity during the life of the Project will result in take of a species designated as endangered or threatened, or a candidate for listing under CESA, the Department recommends that the Project proponent seek appropriate take authorization under CESA prior to implementing the Project. Appropriate authorization from the Department may include an Incidental Take Permit (ITP) or a consistency determination in certain circumstances, among other options (Fish and Game Code §§ 2080.1, 2081, subds. (b),(c)). Early consultation is encouraged, as significant modification to a Project and mitigation measures may be required in order to obtain a CESA Permit. Revisions to the Fish and Game Code, effective January 1998, may require that the Department issue a separate CEQA document for the issuance of an ITP unless the Project CEQA document addresses all Project impacts to CESA-listed species and specifies a mitigation monitoring and reporting program that will meet the requirements of an ITP. For these reasons, biological mitigation monitoring and reporting proposals should be of sufficient detail and resolution to satisfy the requirements for a CESA ITP.

- 5) Biological Baseline Assessment. To provide a complete assessment of the flora and fauna within and adjacent to the project area, with particular emphasis upon identifying endangered, threatened, fully protected, sensitive, regionally and locally unique species, and sensitive habitats, the DEIR should include the following information:
- a) Information on the regional setting that is critical to an assessment of environmental impacts, with special emphasis on resources that are rare or unique to the region (CEQA Guidelines § 15125[c]);
 - b) a thorough, recent, floristic-based assessment of special status plants and natural communities, following the Department's *Protocols for Surveying and Evaluating Impacts to Special Status Native Plant Populations and Natural Communities* (see <http://www.dfg.ca.gov/habcon/plant/>);
 - c) floristic, alliance- and/or association-based mapping and vegetation impact assessments conducted at the project site and within the neighboring vicinity. *The Manual of California Vegetation*, second edition, should also be used to inform this mapping and assessment (Sawyer et al. 2008³). Adjoining habitat areas should be included in this assessment where site activities could lead to direct or indirect impacts offsite. Habitat mapping at the alliance level will help establish baseline vegetation conditions;
 - d) a complete, recent, assessment of the biological resources associated with each habitat type on site and within adjacent areas that could also be affected by the project. The

³Sawyer, J. O., Keeler-Wolf, T., and Evens J.M. 2008. A manual of California Vegetation, 2nd ed. ISBN 978-0-943460-49-9.

Department's California Natural Diversity Data Base (CNDDDB) in Sacramento should be contacted to obtain current information on any previously reported sensitive species and habitat. The Department recommends that CNDDDB Field Survey Forms be completed and submitted to CNDDDB to document survey results. Online forms can be obtained and submitted at http://www.dfg.ca.gov/biogeodata/cnddb/submitting_data_to_cnddb.asp;

- e) a complete, recent assessment of rare, threatened and endangered and other sensitive species on site and within the area of potential effect, including California Species of Special Concern (CSSC) and California Fully Protected Species. Species to be addressed should include all those which meet the CEQA definition (see CEQA Guidelines § 15380). Seasonal variations in use of the project area should also be addressed. Focused species-specific surveys, conducted at the appropriate time of year and time of day when the sensitive species are active or otherwise identifiable, are required. Acceptable species-specific survey procedures should be developed in consultation with the Department and the U.S. Fish and Wildlife Service; and,
 - f) a recent, wildlife and rare plant survey. The Department generally considers biological field assessments for wildlife to be valid for a one-year period, and assessments for rare plants may be considered valid for a period of up to three years. Some aspects of the proposed project may warrant periodic updated surveys for certain sensitive taxa, particularly if build out could occur over a protracted time frame, or in phases.
5. Biological Direct, Indirect, and Cumulative Impacts. To provide a thorough discussion of direct, indirect, and cumulative impacts expected to adversely affect biological resources, with specific measures to offset such impacts, the following should be addressed in the DEIR:
- a) A discussion of potential adverse impacts from lighting, noise, human activity, exotic species, and drainage. The latter subject should address project-related changes on drainage patterns and downstream of the project site; the volume, velocity, and frequency of existing and post-project surface flows; polluted runoff; soil erosion and/or sedimentation in streams and water bodies; and post-project fate of runoff from the project site. The discussion should also address the proximity of the extraction activities to the water table, whether dewatering would be necessary and the potential resulting impacts on the habitat, if any, supported by the groundwater. Mitigation measures proposed to alleviate such impacts should be included;
 - b) a discussion regarding indirect project impacts on biological resources, including resources in nearby public lands, open space, adjacent natural habitats, riparian ecosystems, and any designated and/or proposed or existing reserve lands (e.g., preserve lands associated with a NCCP). Impacts on, and maintenance of, wildlife corridor/movement areas, including access to undisturbed habitats in adjacent areas, should be fully evaluated in the DEIR;
 - c) the impacts of zoning of areas for development projects or other uses nearby or adjacent to natural areas, which may inadvertently contribute to wildlife-human interactions. A discussion of possible conflicts and mitigation measures to reduce these conflicts should be included in the environmental document; and,

- d) a cumulative effects analysis, as described under CEQA Guidelines section 15130. General and specific plans, as well as past, present, and anticipated future projects, should be analyzed relative to their impacts on similar plant communities and wildlife habitats.
6. Avoidance, Minimization, and Mitigation for Sensitive Plants. The DEIR should include measures to fully avoid and otherwise protect sensitive plant communities from project-related direct and indirect impacts. The Department considers these communities to be imperiled habitats having both local and regional significance. Plant communities, alliances, and associations with a statewide ranking of S-1, S-2, S-3 and S-4 should be considered sensitive and declining at the local and regional level. These ranks can be obtained by querying the CNDDDB and are included in *The Manual of California Vegetation* (Sawyer et al. 2008).
 7. Compensatory Mitigation. The DEIR should include mitigation measures for adverse project-related impacts to sensitive plants, animals, and habitats. Mitigation measures should emphasize avoidance and reduction of project impacts. For unavoidable impacts, on-site habitat restoration or enhancement should be discussed in detail. If on-site mitigation is not feasible or would not be biologically viable and therefore not adequately mitigate the loss of biological functions and values, off-site mitigation through habitat creation and/or acquisition and preservation in perpetuity should be addressed.
 8. Long-Term Management of Mitigation Lands. For proposed preservation and/or restoration, the DEIR should include measures to protect the targeted habitat values from direct and indirect negative impacts in perpetuity. The objective should be to offset the project-induced qualitative and quantitative losses of wildlife habitat values. Issues that should be addressed include, but are not limited to, restrictions on access, proposed land dedications, monitoring and management programs, control of illegal dumping, water pollution, and increased human intrusion. An appropriate non-wasting endowment should be set aside to provide for long-term management of mitigation lands.
 9. Nesting Birds. In order to avoid impacts to nesting birds, the DEIR should require that clearing of vegetation and construction occur outside of the peak avian breeding season, which generally runs from February 1st through September 1st (as early as January 1 for some raptors). If project construction is necessary during the bird breeding season, a qualified biologist with experience in conducting bird breeding surveys should conduct weekly bird surveys for nesting birds within three days prior to the work in the area, and ensure that no nesting birds in the project area would be impacted by the project. If an active nest is identified, a buffer shall be established between the construction activities and the nest so that nesting activities are not interrupted. The buffer should be a minimum width of 300 feet (500 feet for raptors), be delineated by temporary fencing, and remain in effect as long as construction is occurring or until the nest is no longer active. No project construction shall occur within the fenced nest zone until the young have fledged, are no longer being fed by the parents, have left the nest, and will no longer be impacted by the project. Reductions in the nest buffer distance may be appropriate depending on the avian species involved, ambient levels of human activity, screening vegetation, or possibly other factors.

10. Translocation/Salvage of Plants and Animal Species. Translocation and transplantation is the process of moving an individual from the project site and permanently moving it to a new location. The Department generally does not support the use of, translocation or transplantation as the primary mitigation strategy for unavoidable impacts to rare, threatened, or endangered plant or animal species. Studies have shown that these efforts are experimental and the outcome unreliable. The Department has found that permanent preservation and management of habitat capable of supporting these species is often a more effective long-term strategy for conserving sensitive plants and animals, and their habitats.
11. Moving out of Harm's Way. The proposed project is anticipated to result in clearing of natural habitats that support many species of indigenous wildlife. To avoid direct mortality, the Department recommends a qualified biological monitor approved by the Department be on site prior to and during ground and habitat disturbing activities to move out of harm's way special status species or other wildlife of low mobility that would be injured or killed by grubbing or project-related construction activities. It should be noted that the temporary relocation of on-site wildlife does not constitute effective mitigation for the purposes of offsetting project impacts associated with habitat loss.
12. Wildlife Movement and Connectivity. The project area supports significant biological resources and is located adjacent to a regional wildlife movement corridor. The project area contains habitat connections and supports movement across the broader landscape, sustaining both transitory and permanent wildlife populations. Onsite features, which contribute to habitat connectivity, should be evaluated and maintained. Aspects of the project could create physical barriers to wildlife movement from direct or indirect project-related activities. Indirect impacts from lighting, noise, dust, and increased human activity may displace wildlife in the general area.
13. Revegetation/Restoration Plan. Plans for restoration and re-vegetation should be prepared by persons with expertise in southern California ecosystems and native plant restoration techniques. Plans should identify the assumptions used to develop the proposed restoration strategy. Each plan should include, at a minimum: (a) the location of restoration sites and assessment of appropriate reference sites; (b) the plant species to be used, sources of local propagules, container sizes, and seeding rates; (c) a schematic depicting the mitigation area; (d) a local seed and cuttings and planting schedule; (e) a description of the irrigation methodology; (f) measures to control exotic vegetation on site; (g) specific success criteria; (h) a detailed monitoring program; (i) contingency measures should the success criteria not be met; and (j) identification of the party responsible for meeting the success criteria and providing for conservation of the mitigation site in perpetuity. Monitoring of restoration areas should extend across a sufficient time frame to ensure that the new habitat is established, self-sustaining, and capable of surviving drought.
 - a) The Department recommends that local onsite propagules from the project area and nearby vicinity be collected and used for restoration purposes. Onsite seed collection should be initiated in the near future in order to accumulate sufficient propagule material for subsequent use in future years. Onsite vegetation mapping at the alliance and/or association level should be used to develop appropriate restoration goals and local plant palettes. Reference areas should be identified to help guide restoration efforts. Specific restoration plans should be developed for various project components as appropriate.

- b) Restoration objectives should include providing special habitat elements where feasible to benefit key wildlife species. These physical and biological features can include, for example, retention of woody material, logs, snags, rocks and brush piles (see Mayer and Laudenslayer, 1988⁴, for a more detailed discussion of special habitat elements).

We appreciate the opportunity to comment on the referenced NOP. Questions regarding this letter and further coordination on these issues should be directed to Scott Harris, Environmental Scientist at (626) 797-3170 or scott.p.harris@wildlife.ca.gov.

Lijin,

Yes, they are formal comments.

The NOP refers to the Public Participation Plan which identifies the audience and methodology, but it wasn't clear to me, if the PEIR would strictly adhere to CEQA (Public Hearing, etc.), where the RTP would be following RTP guidelines and MAP-21.

Hi Lijin,

One clarifying question.

Will the public engagement for the Draft PEIR and Draft RTP/SCS occur together or separate/concurrently? Requirements slightly different for each one.

Re: **Notice of Preparation for the 2016-2040 Regional Transportation Plan/
Sustainable Communities Strategy Program Environmental Impact Report**

Dear Ms. Sun:

The City of Anaheim appreciates the opportunity to review and comment on the Notice of Preparation of the 2016-2040 Regional Transportation Plan/Sustainable Communities Strategy (RTP/SCS) Program Environmental Impact Report (PEIR). The Notice of Preparation has been routed for review to our interdepartmental Environmental Review Committee for comment.

The following comments are from the Traffic Engineering Division of the Public Works Department. For further clarification, please contact David Kennedy at (714) 765-4920 or dkennedy@anaheim.net.

- RTP Land Use, both Existing and Future Year, should be coordinated with City of Anaheim Staff to ensure they are accurately represented. Developments such as ARTIC are now operational and should be included under the Existing Conditions.
- RTP Roadway and Highway network, both Existing and Future Year, should be coordinated with City of Anaheim Staff to ensure they are accurately represented.

The following comments are from the Advanced Planning Division of the Planning Department. For further clarification, please contact me at (714) 765-4958 or skim@anaheim.net.

- Mitigation measures included in the PEIR should be limited to issues that are within SCAG's purview.
- Mitigation measures should not be duplicative of existing regulations administered by or under the jurisdiction of other agencies. However, it is recommended that these regulations be referenced in the environmental analysis.
- Please provide documentation in the PEIR to demonstrate feasibility of all proposed mitigation measures.

Lijin Sun
April 6, 2015
Page 2 of 2

- SCAG may wish to consider providing a “tool box” of best practices for strategies that may reduce environmental impacts but are not within SCAG’s jurisdiction. However, these strategies should not be relied upon to mitigate project impacts.

Once again, thank you for the opportunity to provide comments on the Notice of Preparation for the 2016-2040 RTP/SCS PEIR. Please forward any subsequent public notices and/or environmental documents regarding this project to my attention at the address listed at the bottom of the first page of this letter. If you have any questions regarding this response, please do not hesitate to contact me at (714) 765-4958.

Sincerely,

RE: Comments on the Notice of Preparation of a Program Environmental Impact Report for the 2016-2040 Regional Transportation Plan/Sustainable Communities Strategy

Dear Ms. Sun:

The City of Irvine appreciates the opportunity to review and provide comments on the Notice of Preparation of a Program Environmental Impact Report (EIR) for the 2016-2040 Regional Transportation Plan/Sustainable Communities Strategy (RTP/SCS). The City of Irvine is requesting that Southern California Association of Governments (SCAG) staff consider the following comments during the preparation of the Program EIR.

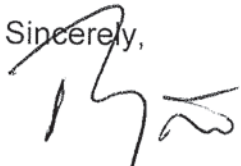

1. Limit mitigation measures included in the Program EIR for the 2016-2040 RTP/SCS to issues that are within SCAG's purview. All measures related to issues SCAG does not have the purview to implement should be included in an appendix of the RTP/SCS that can be used by local jurisdictions, local agencies and project sponsors as a menu of options or toolbox of strategies. This would be consistent with the Program EIR developed for the 2012-2035 RTP/SCS.
2. For the Program EIR for the 2016-2040 RTP/SCS, do not include any mitigation measures that are duplicative of existing regulations administered by or under the jurisdiction of other agencies. For each impact already administered by or under another agency, add language similar to "Local jurisdictions, agencies, and project sponsors should comply, as applicable with existing federal, state and local laws and regulations."
3. Provide documentation in the Program EIR for all mitigation measures deemed feasible.

Ms. Lijin Sun
April 7, 2015
Page 2

4. Provide clear language explaining that utilizing the Program EIR as a first-tier document in the preparation of any subsequent project-specific or site-specific environmental analyses is at the discretion of the implementing agencies.

The City of Irvine appreciates your consideration of the comments provided in this letter. It is a shared goal to develop and adopt an RTP/SCS that represents the best in regional planning developed collaboratively with local jurisdictions and stakeholders in a manner that is credible and defensible on all levels. The City of Irvine looks forward to working with SCAG to achieve this goal.

Sincerely,

 *Tim*

RE: Comments on the Notice of Preparation of a Program Environmental Impact Report for the 2016-2040 Regional Transportation Plan/Sustainable Communities Strategy

Dear Ms. Sun:

The City of Newport appreciates the opportunity to review and provide comments on the Notice of Preparation of a Program Environmental Impact Report ("PEIR") for the 2016-2040 Regional Transportation Plan/Sustainable Communities Strategy (2016-2040 RTP/SCS). The City of Newport Beach agrees with the comments submitted by the Orange County Council of Governments ("OCCOG") on March 26th (attached) and requests that SCAG staff consider those comments during the preparation of the PEIR.

It is a shared goal to develop and adopt a Regional Transportation Plan and Sustainable Communities Strategy that represents the best in regional planning developed collaboratively with local jurisdictions and stakeholders in a manner that is credible and defensible on all levels. The City of Newport Beach looks forward to working with the Southern California Association of Governments to achieve this goal and appreciates the consideration of our comments.

Sincerely,

Kimberly Brandt, AICP

RE: Comments on the Notice of Preparation of a Program
Environmental Impact Report for the 2016-2040 Regional
Transportation Plan/Sustainable Communities Strategy

Dear Ms. Sun:

The Orange County Council of Governments (OCCOG) appreciates the opportunity to review and provide comments on the Notice of Preparation of a Program Environmental Impact Report (PEIR) for the 2016-2040 Regional Transportation Plan/Sustainable Communities Strategy (2016-2040 RTP/SCS). OCCOG is requesting that SCAG staff consider the following comments during the preparation of the PEIR.

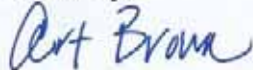

1. SCAG shall limit mitigation measures included in the PEIR for the 2016-2040 RTP/SCS to issues that are within SCAG's purview. All measures related to issues SCAG does not have the purview to implement shall be included in an appendix of the RTP/SCS that can be used by local jurisdictions, local agencies, and project sponsors as a menu of options or toolbox of strategies.
2. The PEIR for the 2016-2040 RTP/SCS shall not include any mitigation measures that are duplicative of existing regulations administered by or under the jurisdiction of other agencies. For each impact already administered by or under another agency, SCAG could add the language "Local jurisdictions, agencies, and project sponsors should comply, as applicable with existing federal, state, and local laws and regulations."
3. SCAG shall ensure that documentation is provided in the PEIR for all mitigation measures deemed feasible.

The OCCOG appreciates your consideration of the comments provided in this letter. It is a shared goal to develop and adopt a

RE: Notice of Preparation of a Program Environmental Impact Report for the 2016-2040
Regional Transportation Plan/Sustainable Communities Strategy

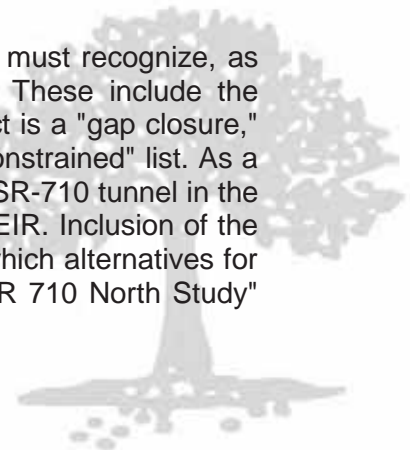

Dear Ms. Sun,

The City of South Pasadena (City) appreciates the opportunity to comment on the Southern California Association of Governments' (SCAG) Notice of Preparation (NOP) for the Program Environmental Impact Report (PEIR) of the 2016-2040 Regional Transportation Plan/Sustainable Communities Strategy (RTP/SCS). The City would like to raise the following issues of concern regarding the 2016-2040 RTP/SCS PEIR:

1. Faulty Assumption that "SR-710 North Extension (tunnel)" should be included in the 2016-2040 RTP/SCS.

The NOP asserts that the 2016-2040 RTP/SCS "will largely embody the goals, objectives, and transportation improvements that have been considered in the adopted 2012 RTP/SCS, last amended in September 2014 (Amendment No. 2 to the 2012 RTP/SCS)." This assertion pretends that the law, state policy, and activities in the SR-710 corridor have been unchanged in the past four years, and that whatever assumptions and premises governed in 2012 should be repeated now.

To prepare an adequate PEIR on the 2016-2040 RTP/SCS, SCAG must recognize, as detailed below, the flawed assumptions built into the 2012 RTP. These include the premises, questioned in greater detail below, that the SR-710 project is a "gap closure," and that the tunnel project qualifies for inclusion in the "financially constrained" list. As a preliminary matter, however, regardless of the error of including the SR-710 tunnel in the 2012 plan, that error should no longer be perpetuated in the 2016 PEIR. Inclusion of the SR-710 tunnel places a heavy and unlawful finger on the scale by which alternatives for the SR-710 corridor are to be evaluated in the just-commenced "SR 710 North Study" draft EIS/EIR.

The SR-710 North Study declares that "[t]he purpose of the proposed action is to effectively and efficiently accommodate regional and local north-south travel demands in the study area of the western San Gabriel Valley and east/northeast Los Angeles." Putting aside whether that North Study fulfills that purpose, its stated intent is to compare several alternatives on a neutral field of functional capability and environmental and economic impact. But that study's actual comparison of build alternatives relies on the 2012 RTP/SCS to create a "valid" inconsistency of all non-tunnel alternatives (and the single-bore tunnel variation-alternative) with SCAG policies and objectives (SR-710 North Study 29, 2-89.). The flawed 2012 RTP will thus be argued as justifying a decision to select the tunnel, not because it is the superior project, but because only that choice avoids a conflict with SCAG. Furthermore, the recently released SR-710 North Study Draft Environmental Impact Report has stated that no preferred alternative has been identified or selected.

While the City recognizes that the 2016-2040 RTP/SCS "does not specifically analyze potential environmental effects that any of the transportation projects may cause," it nonetheless "includes individual transportation projects." In order for the PEIR to become a valid program EIR its program must not include a SR-710 project or any project that pre-empts the selection process that is to occur through the SR-710 North Study.

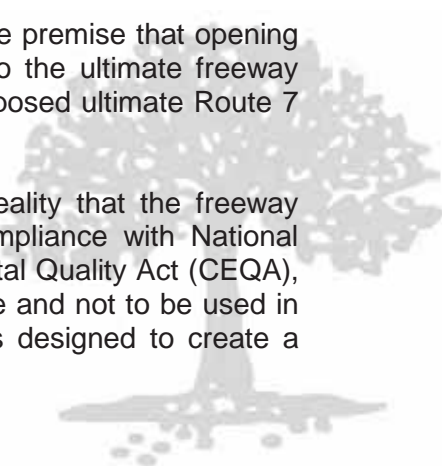

2. Faulty Assumption that a Corridor Project "Will Close [the] 710 Freeway Gap."

If the 2016 RTP/SCS DEIR includes projects as described in the 2012 RTP/SCS and amendments, it will perpetuate the error that the 710 Route Study and SR-710 North Extension serve to "close the freeway gap" (2012 RTP FTIP project list.28; 2012 Financially-Constrained RTP project list 164; Draft 2015 FTIP project list 11.). The SR-710 freeway ends at Valley Boulevard; the construction in Pasadena was allowed by judicial order that treats the construction as part of the I-210 interchange.

In the 1974-1998 EIS/EIR documents for the previously proposed surface route, the project was characterized as the extension of the existing I-710 north of Valley Boulevard. Los Angeles County Metropolitan Transportation Authority (LACMTA) adopted that terminology when the project changed from surface to tunnel, and was made a subject of Measure R. SCAG, however, continued in 2012, as it did in 2008, to refer to the project as a "gap closure", presumably on the premise that part of the I-710 freeway was completed south of the I-210 interchange. The 1976 judicial order that allowed the freeway component between I-210 and Del Mar Boulevard to be opened to traffic, however, treated this freeway component as part of the I-210 project, as its opening was funded by an I-210 contract. In the words of the court, "only the southern portion of the Long Beach Freeway has been completed and it now terminates at Valley Boulevard" (City of South Pasadena v. Volpe, 418 F. Supp. 854, 858 (C.D. Cal. 1976).

Moreover, opening of that freeway portion was conditioned on the premise that opening the freeway segment "will have no effect on the decision as to the ultimate freeway location and will not foreclose reasonable alternatives to the proposed ultimate Route 7 Freeway" (Id. at 864.).

To label the SR-710 project as a "gap closure" ignores the reality that the freeway construction north of Del Mar was never accomplished in compliance with National Environmental Protection Act (NEPA) and California Environmental Quality Act (CEQA), and was only allowed by the court as part of the 210 interchange and not to be used in favor of completing a I-710 freeway. The term "gap closure" is designed to create a

sense of inevitability or priority for this project over competing ones, will have effect on the ultimate decision in the SR-710 North Study and 2016 RTP/SCS PEIR, and should be removed in the environmental documentation.

3. Faulty Assumption that a SR-710 Tunnel Project Is "Financially-Constrained."

The 2012 RTP/SCS continued to represent the fiction that a tunnel project qualifies as a constrained project. While in 2012 some financing might have been deemed more "reasonably available" than previously because of the passage of Measure R and state legislation enabling a toll facility, Measure R accounts for no more than one-sixth of projected cost. SCAG failed in 2012 to provide evidence that private investors would consider entering into a Public Private Partnership for this project in light of competing projects of higher social and transportation value, and with greater promises of return. Moreover, the intervening years since 2012 have produced no further public financial commitments to the project, short of authorizing the SR-710 North Study, which is emphatically not funding any of the alternatives to be examined there.

The appropriate federal regulation, 23 C.F.R. § 450.104 offers the following definitions (emphasis added):

"Financially constrained" or "fiscal constraint" means that the metropolitan transportation plan, TIP, and STIP includes sufficient financial information for demonstrating that projects in the metropolitan transportation plan, TIP, and STIP can be implemented using committed, available, or reasonably available revenue sources, with reasonable assurance that the federally supported transportation system is being adequately operated and maintained. For the TIP and the STIP, financial constraint/fiscal constraint applies to each program year. Additionally, projects in air quality nonattainment and maintenance areas can be included in the first two years of the TIP and STIP only if funds are "available" or "committed."

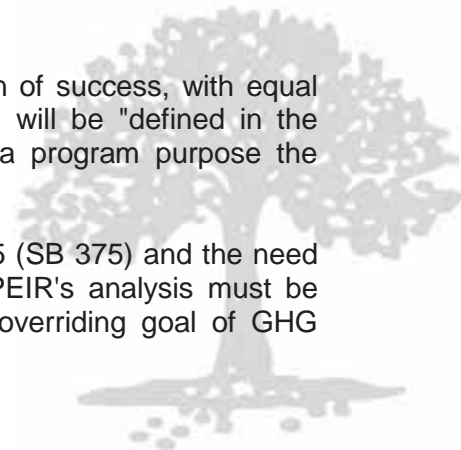

If anything, since 2012 the "reasonably available revenue sources" have become even more remote. Measure J failed at the ballot, and a second failure might be risked by including a tunnel in Measure R's successor. Moreover, the SR-710 North Study now introduces several previously-unstudied alternatives to a tunnel, and a more attractive alternative may emerge from the DEIR public circulation. LACMTA has represented that the Measure R funds are not required to be devoted to a tunnel. The increasing competition for these funds in the SR-710 corridor make any 2012 assumptions of "reasonably available," faulty as they were then, even less rational today.

The 2016 RTP/SRS EIR must not treat an SR-710 tunnel alternative as a "financially constrained" project.

4. Need to Emphasize Greenhouse Gas (GHG) Reduction and Vehicle Miles Traveled (VMT) Reduction as Paramount Program Purposes.

The NOP seems to focus on "mobility" as the primary criterion of success, with equal billing given to "sustainability" and "economy." "Sustainability" will be "defined in the broadest way possible," and "economy" seems to make as a program purpose the construction of projects per se.

The City recognizes that the NOP also refers to Senate Bill 375 (SB 375) and the need to meet GHG reduction targets. To ensure that result, the PEIR's analysis must be driven by developing the 2016-2040 RTP/SCS to attain the overriding goal of GHG

reductions. Given developing land use and technological methodologies, the SB 375 targets should be treated as floors, not ceilings. Consistently with Senate Bill 743 (ch. 386, 2013 Cal. Stats.), program elements must be measured not just by their ability to improve Level of Service (LOS), but primarily by their ability to minimize VMT and trip generation. While by its terms SB 743's mandates apply in transit priority areas (Pub. Res. Code, § 21099(b)), enough of those areas are embraced within SCAG's area of responsibility to render SB 743's specifications applicable to the 2016-2040 RTP/SCS PEIR. Moreover, even beyond the letter of section 21099, general principles of CEQA assessment require that this contemporary methodology, designed to address the compelling contemporary environmental challenge, be applied in the new PEIR.

These observations do not preclude the inclusion of LOS and congestion analyses, provided that they take appropriate account of induced demand over time. Indeed, the proposed Office of Planning and Research (OPR) Guidelines for Implementing SB 743 expressly call out, as have the consensus of academic literature and several judicial decisions, the need to account for induced demand in transportation analysis. (See OPR Proposed CEQA Guideline 15064.3.) Both sound policy and legal compliance call for adherence to that requirement, since induced demand will be a required factor in the CEQA Guidelines before SCAG adopts its 2016 RTP/SCS, and independently judicially enforceable.

Thank you for your consideration of these comments. If you have any questions or comments please feel free to contact Margaret Lin, Principal Management Analyst, at MLin@SouthPasadenaCA.gov or (626)403-7236.

Sincerely,

A handwritten signature in blue ink, appearing to read 'Sergio Gonzalez', with a stylized flourish at the end.

2016 PEIR

From: Juachon, Luz <ljuachon@ci.ventura.ca.us>
Sent: Tuesday, April 7, 2015 5:23 PM
To: 2016 PEIR
Cc: Maggie Ide
Subject: Response to SCAG NOP of Program PEIR for the 2016-2040
Attachments: DOC040715.pdf

Dear Ms. Sun,

Attached is the City of Ventura's response on the Notice of Preparation (NOP) of a Program Environmental Impact Report (PEIR) for the 2016-2040.

The original copy of the attached document was sent to you via US Postal service today.

You may contact Dave Ward, Planning Manager at (805) 677-3964 or via email at dward@cityofventura.net if you have any questions or concerns regarding this matter.

Best regards,

Luz E. Juachon
Planning Division
City of Ventura

Southern California Association of Governments
Attn. Ms. Lijin Sun
Senior Regional Planner
818 West 7th Street, 12th Floor
Los Angeles, CA 90017

Dear Ms. Sun:

Thank you for the opportunity to comment on the Notice of Preparation (NOP) of a Program Environmental Impact Report (PEIR) for the 2016-2040 Regional Transportation Plan/Sustainable Communities Strategy (2016 RTP/SCS). As was noted recently regarding the 2014 base year data development for the 2016-2040 RTP/SCS, SCAG assumes a higher rate of growth for the City of Ventura than has been in evidence in the City's history or will be possible under constraints to natural resources such as water. Furthermore, the City is currently undertaking development of a residential allocation/growth management policy which may further restrict what development may be allowed under current levels of public services provided by the City and other service providers. As such, the PEIR for the 2016 RTP/SCS should contain a thorough analysis of the 2016 RTP/SCS land use scenario as it relates to impacts to land use policy; constrained public resources; and public services levels, all at the local jurisdiction and local service agency level.

We look forward to review of the pending EIR and request retention on circulation lists for future documents and CEQA circulation pertaining to this project and ask that correspondence be sent to me at:

City of Ventura Planning Division
Attn: Dave Ward, AICP, Planning Manager
501 Poli Street
P.O. Box 99
Ventura, CA 93002

Should you have further questions I can also be contacted at (805) 677-3964 or dward@cityofventura.net.

Sincerely,

A handwritten signature in blue ink that reads "Dave Ward".

Dave Ward, AICP
Planning Manager

Re: NOP of a PEIR for 2016-2040 RTP/SCS
Su: Submission of Public Comments

We the above organizations wish to jointly submit the following public comments on the SCAG proposed Program Environmental Impact Report for the 2016-20140 Regional Transportation Plan/Sustainable Communities Strategy.

We have attached a red-lined SCAG published document to reflect our requested additions and changes in the various sections.

The primary contact for correspondence and information is Jesse N. Marquez, Executive Director for the Coalition For A Safe Environment.

2016 RTP/SCS Goals

The RTP/SCS goals demonstrate the need to balance many priorities in the most cost-effective manner. As currently being envisioned, the goals of the 2016 RTP/SCS are expected to remain substantively the same as the goals established in the 2012 RTP/SCS, adopted by SCAG's Regional Council in April 2012⁴:

- Maximize mobility and accessibility for all people and goods in the region
- Ensure travel safety and reliability for the people and goods in the region
- Preserve and ensure a sustainable regional transportation system
- Maximize the security of the regional transportation system through improved monitoring, recovery planning, and coordination with other security agencies
- Maximize the productivity of our transportation system
- Protect the environment, improve air quality and promote energy efficiency
- Encourage land use and growth patterns that complement our transportation investments
- Maximize the incorporation of green sustainable construction materials
- Protect and improve public health along transportation corridors
- Include 21st century zero emissions public & freight transportation technologies
- SCASG shall mitigate all negative direct, indirect, cumulative & growth inducing impacts

In addition to meeting the GHG emissions reduction targets that the ARB has set for the SCAG region pursuant to SB 375, SCAG intends to address the goals set forth in Executive Order S-3-05 (to reduce GHG emissions to 1990 levels by 2020, and to reduce GHG emissions to 80 percent below 1990 levels by 2050).

2016 RTP/SCS Policies and Performance

The 2016 RTP/SCS is currently being envisioned to include a set of guiding policies that focus future investments on the best-performing projects and strategies that seek to preserve, maintain, and optimize the performance of the existing transportation system. As set forth in the 2012-2035 RTP/SCS⁵, these policies will include the following and are intended to help track how well the region is performing in relation to a broad range of goals and objectives.

- Transportation investments shall be based on SCAG's adopted Regional Performance Indicators.
- Ensuring safety, adequate maintenance, and efficiency of operations on the existing multi-modal transportation system should be the highest RTP priorities for any incremental funding in the region.
- RTP land-use and growth strategies in the RTP will respect local input and advance smart growth initiatives.
- Transportation Demand Management (TDM) and non-motorized transportation will be focus areas.
- High-Occupancy Vehicle (HOV) gap closures that significantly increase transit and rideshare usage will be supported and encouraged.
- Monitoring progress on all aspects of the Plan, including the timely implementation of projects, programs, and strategies, will be an important and integral component of the 2016 Plan.
- Maximum achievable reduction of pollution emissions and greenhouse gases.
- Fastest and safest achievable logistical transportation movement.

- Lowest life time maintenance cost and waste disposal.
- SCAG shall prioritize zero emissions public and freight transportation investments.
- SCAG shall include mitigation for indirect, cumulative and growth inducing negative public impacts.
- Transportation investments shall comply with the CARB and SCAQMD Land Use Planning Guidelines.
- Transportation investments shall include an assessment of community land loss for private industry freight transportation.
- Compliance to California Health & Safety Codes.
- Compliance to Title VI of the Civil Rights Act of 1974 and Presidential Order 12898.
- Compliance to AB 32 and SB 375.
- Adopted Green Sustainable Construction Policy, Plan & Requirements for the maximum incorporation of green sustainable construction materials.

Consistent with the goals and performance-based transportation planning approach set forth under MAP-21, performance measures will play a critical role in the development of the 2016 RTP/SCS. Performance measures are intended to help quantify regional goals, estimate the impacts of proposed investments, and evaluate progress over time. SCAG intends to build upon and update the performance measures developed for the 2012

Plan⁶ in the 2016 RTP/SCS. This way, there is consistency when tracking and assessing the region's performance and whether the region is progressing towards meeting and exceeding federal and state requirements.

The 2016 RTP/SCS is currently being envisioned to include a set of key categories of performance measures as follows:

- Location efficiency
- Mobility and accessibility
- Safety and health
- Environmental quality
- Economic well-being
- Investment effectiveness
- System sustainability
- Negative Environmental Justice Community Impacts vs Non-Environmental Justice Community
- CARB and SCAQMD Land Use Guidelines compliance
- Public externalized costs vs private industry contribution costs
- Public/Non-Profit Organization submitted projects/scenarios vs governmental agency projects/scenarios
- Identification and mitigation of negative indirect and cumulative impacts i.e. transportation investments cause a growth induced increase in number of ships and emissions
- An assessment of adopted and included public recommendations

Preliminary 2016 RTP/SCS Scenario Planning Matrix

As part of the 2016 RTP/SCS planning process, SCAG is developing a suite of transportation and land use scenarios for public consideration. These scenarios focus on transportation and land use related inputs that are modified to vary across four (4) scenarios. The purpose of developing scenarios is to provide an analytical technique to layout the policy choices to be considered as the 2016 RTP/SCS is developed. The Preliminary 2016 RTP/SCS Scenario Planning Matrix outlines a number of plan elements that together build a framework for comparing potential regional scale choices on issues such as land use development patterns, transportation investments, transportation demand management/transportation system

management (TDM/TSM), and technological innovations. Policy considerations currently outlined in the Preliminary Scenario Planning Matrix include land use, housing, farm and natural lands, roadway and highway network, transit, active transportation, technology/innovation, and TDM/TSM. Scenarios will be analyzed and compared using outputs from SCAG regional transportation model, Scenario Planning Model, or off-model analysis. The outputs from these modeling analyses will help illustrate variations between scenarios and policy elements at the regional scale for metrics such as public health, mobility, accessibility, and sustainability.

- SCAG shall solicit and include Public/Non-Profit Organization submitted projects/scenarios

Bottom-up Local Growth and Land Use Input Process

A critical component to developing a successful 2016 RTP/SCS is the participation and cooperation of all local government partners and stakeholders within the SCAG region. To this end, SCAG uses a bottom-up local input process by which all local governments are informed of the 2016 RTP/SCS planning process and have clear and adequate opportunities to provide input. Growth forecasts and land use updates for development of the 2016 Plan have been developed through this bottom-up local input process, including: 1) extensive, ongoing communication with SCAG partners and stakeholders on growth forecast and land use updates throughout the region; 2) implementation of a formal protocol to guide the communication between SCAG staff and local jurisdiction regarding the input and review process; 3) flexibilities in providing official input to SCAG through the use of a Data Verification and Approval Form; 4) adoption of a resolution designating a staff position at the local government level to add clarity and accountability to the process; and 5) development of an automated mapping workflow and a digitalized land use database in a geographic information system (GIS) format to facilitate the review and input process.

- SCAG shall assure that transportation investments shall comply with the CARB and SCAQMD Land Use Planning Guidelines.

RTP/SCS Public Participation Plan and Process

Another key aspect of the 2016 RTP/SCS plan development is public participation. To provide early and meaningful public participation in the Plan's development and decision-making processes, SCAG has developed and adopted a Public Participation Plan ("PPP").⁷ The adoption of the PPP has demonstrated SCAG's commitment in increasing awareness and involvement of interested persons in SCAG's governmental processes and regional transportation and land use planning. SCAG is committed to providing information and timely public notice, ensuring full public access to key decisions, and supporting early and continuing public involvement in the development of the 2016 RTP/SCS. To this end, SCAG will continue to engage a wide range of stakeholder groups, elected officials, special interest groups, the general public, and other interested parties through a series of workshops and public meetings, as well as SCAG's policy committees, task forces, and subcommittee structure during the development of the 2016 RTP/SCS and its associated CEQA review process.

- SCAG shall include sponsoring public hearings and workshops in all major transportation corridor communities/cities.

SCOPE OF ENVIRONMENTAL ANALYSIS IN THE PEIR

The PEIR to be prepared for the 2016 RTP/SCS analyzes potential effects that the 2016 RTP/SCS may cause on the environment. Although the 2016 RTP/SCS includes individual transportation projects, the associated PEIR is programmatic in nature and does not specifically analyze potential environmental effects that any of the individual transportation projects may cause. Project-level environmental impact analyses will need to

be prepared by implementing agencies on a project-by-project basis as projects proceed through the design and decision-making process. Project-specific planning and implementation undertaken by each project sponsor/implementing agency will depend on a number of issues, including: policies, programs and projects adopted at the local level; restrictions on federal, State and local transportation funds; the results of feasibility studies for particular corridors; and project-specific environmental review.

Potential scope of environmental effects that warrant analysis and consideration in the 2016 RTP/SCS Draft PEIR are as follows:

- Aesthetics and Views
 - Agriculture and Forestry Resources
 - Air Quality
 - Biological Resources and Open Space
 - Cultural Resources
 - Energy
 - Geology, Soils and Mineral Resources
 - Greenhouse Gas Emissions and Climate Change
 - Hazards and Hazardous Materials
 - Hydrology and Water Resources
 - Land Use and Planning
 - Noise
 - Population, Employment, and Housing
 - Recreation
 - Transportation, Traffic, and Safety
 - Public Services and Utilities
- Public Health (Program/Project Health Impact Assessment)
 - Zero Emissions Transportation (Technology Assessment)
 - Identification of Indirect/Cumulative/Growth Inducing Projects (Negative Impact Assessment)

PRELIMINARY 2016 RTP/SCS ALTERNATIVES

It is anticipated that the PEIR will evaluate at least three potential alternatives to the 2016 RTP/SCS as follows: (1) No Project; (2) Refined 2012 RTP/SCS Alternative; and (3) Intensified Transportation and Land Use Integration Alternative. These alternatives will evaluate various planning scenarios capable of achieving most of the basic objectives of the 2016 RTP/SCS. More specifically, each Alternative, except the No Project Alternative, will include a range of policies and projects including, but not limited to, variations in land use density and intensity, transit and rail systems, active transportation, highway/roadway construction and widening and transportation demand/system management.

SCAG has the discretion to select one alternative in its entirety or to combine elements of various alternatives to complete the PEIR for the RTP/SCS. The development of alternatives in a PEIR is focused on avoiding or reducing potentially significant impacts of the 2016 RTP/SCS. Therefore, detailed alternative descriptions are normally developed as impacts of a project are identified through the PEIR process.

- SCAG shall solicit and include Public/Non-Profit Organization submitted projects/scenarios

No Project Alternative

The No Project Alternative is required by Section 15126.6(e)(2) of the CEQA Guidelines and assumes that the proposed project would not be implemented. The No Project Alternative will consider continued implementation of the goals and policies of the adopted 2012 RTP/SCS, as amended in September 2014. The No Project Alternative includes those transportation projects that are included in the first year of the previously conforming RTP/SCS and/or FTIP, or those that have completed environmental review by December 2014. The growth scenario included in the No Project Alternative is based on the 2012 RTP/SCS regional population, housing and employment totals.

Refined 2012 RTP/SCS Alternative

A Refined 2012 RTP/SCS Alternative would include the most recent growth forecast data, including local input on land use, employment, population, and housing data, and new input on transportation projects from the

County Transportation Commissions in the SCAG region. This Alternative will consider continued implementation of the policies, strategies and projects included in the 2012 RTP/SCS.

Intensified Transportation and Land Use Integration Alternative

An Intensified Transportation and Land Use Integration Alternative would focus on analyzing more intensified integration of transportation and land use projects and policies aimed at further reducing vehicle miles traveled and GHG and criteria pollutant emissions to improve mobility, accessibility, and sustainability. This Alternative could include more mixed-use, infill development, increased densities in urban cores, new technological innovations, and/or additional transit and active transportation strategies.

- Identification of special event day choke points on freeways & major public transit corridors

SCAG is seeking input on the alternatives through the scoping process which could result in modifications to the number, content and scope of alternatives analyzed in the PEIR. Furthermore, the PEIR will identify all alternatives that were initially considered, but rejected for reasons including infeasibility or inability for a particular alternative to meet the Project objectives or reduce environmental impacts beyond that of the Project.

- Zero Emission Dedicated Freight Truck Routes/Lanes
i.e. Terminal Island 104 Freeway, Long Beach 110 Freeway
(Electric Battery, Fuel Cell, Hydrogen Fuel Cell)
- Zero Emission Electric Train Routes
i.e. Alameda Corridor, Terminal Island 104 Freeway, LA Harbor 110 Freeway, San Diego 405 Freeway, Riverside 91 Freeway, Pomona 60 Freeway, San Bernardino 10 Freeway, Foothill 210 Freeway
(MagLev Train Passenger & Freight Trains)

Ms. Lijin Sun
Senior Regional Planner
Southern California Association of Governments
818 West Seventh Street, 12th Floor
Los Angeles, CA 90017-3435

Dear Ms. Sun:

**NOTICE OF PREPARATION OF A PROGRAM
ENVIRONMENTAL IMPACT REPORT (PEIR) FOR
THE 2016-2040 REGIONAL TRANSPORTATION PLAN (RTP)/
SUSTAINABLE COMMUNITIES STRATEGY (SCS)**

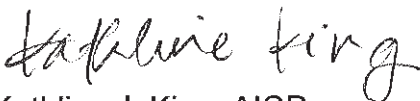

The Notice of Preparation for the above PEIR has been reviewed for potential impacts on the facilities under the jurisdiction of this Department. Please find below our comments on the PEIR:

1. The PEIR should include a map identifying the locations of all existing open space and recreation lands in the SCAG region, including public parks, recreational facilities, and other open space and recreational areas owned/maintained by local, state, federal, and non-profit, agencies.
2. The analysis in the PEIR for recreational resources should evaluate the proposed project's impacts on existing open space and recreation lands including public parks and recreational facilities/areas. Specifically, the following impacts should be examined:
 - Potential loss or disturbance of open space, recreation lands, and trails;
 - Accessibility and proximity to parks and recreation facilities as a result of the RTP projects;
 - Potential noise impacts to park patrons;
 - Potential increase in air pollutant emissions near a park or recreation area.
3. To address potential impacts on recreational resources, the PEIR should at a minimum include mitigation measures that would:

- Minimize the loss or displacement of existing parkland and open space through the acquisition of replacement land, dedication of park land, or payment of in-lieu fees;
- Require project implementing agencies to conduct the appropriate project specific environmental review, including consideration of loss of open space and recreation lands and consideration of disturbance of existing and proposed trail systems prior to final approval of each project;
- Require project implementing agencies to ensure that projects are consistent with local, regional, state, and federal plans to preserve parks and open space;
- Require the use of corridor realignment, buffer zones, setbacks, berms, and fencing to avoid open space and recreation land;
- Reduce conflicts between transportation uses and open space and recreation lands;
- Ensure the access to parks and public space is provided along with future housing development through dedication of parkland or payment of in lieu fees; and
- Ensure that future impacts to open space and recreation lands would be minimized through cooperation, information exchange, and program development.

We were pleased to see that the 2016 RTP/SCS will continue to improve accessibility and increase proximity to open space and recreation lands in the SCAG region, which is consistent with our recent effort to provide alternative/non-auto directions for certain County regional parks on our website. Thank you for including this Department in the review of this environmental document. If you have any questions, please contact Ms. Jui Ing Chien at (213) 351-5129 or jchien@parks.lacounty.gov.

Sincerely,

Kathline J. King, AICP
Chief of Planning

To: 2016 PEIR
Subject: NOP Comments

Some comments on the Notice of Preparation for the 2016 SCAG PEIR:

- Due to current uncertainty of the SR-710 project and lack of a locally preferred alternative for this corridor, modeling of the PEIR should exclude any project in the SR-710 corridor (i.e. freeway tunnel, light rail, bus rapid transit, TSM/TDM), with a future amendment to the PEIR made to add the project which is selected as the preferred alternative. This is to not bias the final EIR for the SR-710 project which is scheduled for completion in 2016.
- In addition to modeling the "Intensified Transportation and Land Use Integration Alternative" this alternative should include full implementation of all active transportation plans currently approved by local jurisdictions (both funded, strategic, and unconstrained projects), including modeling changes in environment due to road diets/additional bikeways at a programmatic level, so that the public can understand global impacts of implementing an unconstrained active transportation network. Projects currently under development by COGs such as the Coachella Valley Link and South Bay COG Neighborhood Electric Vehicles should also be included, as well as evaluating impacts of trip sharing technology and ride hailing services.

Sincerely,
Hank Fung, P.E.

AIR POLLUTION CONTROL DISTRICT

April 01, 2015

Ms. Lijin Sun, Senior Regional Planner
Southern California Association of Governments
818 W. 7th Street, 12th Floor
Los Angeles, CA 90017

RE: Comments on Notice of Preparation of a Program Environmental Impact Report
for the 2016-2035 Regional Transportation Plan – Sustainable Communities Strategy

Dear Ms.. Lijin Sun:

The Imperial County Air Pollution Control District has finalized the review of the Notice of Preparation of a Program Environmental Impact Report for the 2016-2040 Regional Transportation Plan - Sustainable Communities Strategy and is hereby providing its comments.

- (2) Refined 2012 RTP/SCS Alternative
A refined 2012 RTP/SCS Alternative would include the most recent growth forecast data, including local input on land use, employment, population, and housing data, and new input on transportation projects from the County Transportation Commissions in the SCAG region. This Alternative will consider continued implementation of the policies, strategies and projects included in the 2012 RTP/SCS.
- (3) Intensified Transportation and Land Use Integration Alternative
An intensified Transportation and Land Use Integration Alternative would focus on analyzing more intensified integration of transportation and land use projects and policies aimed at further reducing vehicle miles traveled and GHG and criteria pollutant emissions to improve mobility, accessibility, and sustainability. This Alternative could include more mixed-use, infill development, increased densities in urban cores, new technological innovations, and/or additional transit and active transportation strategies.

Imperial County Air Pollution Control District determines that the Alternatives as proposed aims to avoid or reduce potentially significant impacts of the 2016 RTP/SCS may cause on the environment. Both Alternatives implement ways to avoid, reduce, or otherwise mitigate the impacts of emissions, include a range of policies and projects. Alternative (2) is more basic and proposes a refined RTP/SCS and to incorporate recent growth forecast data and local input on various pertinent from the County Transportation Commissions in the SCAG region. Alternative (3) is a more aggressive approach proposes further analyzing various methods to reduce GHG and criteria pollutant emissions and ultimately improving mobility, accessibility, and sustainability. A combination of elements within the Alternatives may be the best approach to complete the Program Environmental Impact Report for the RTP/SCS, so long as there is an adherence to regulations, meet the objectives, feasibility, and most importantly that the ultimate goal is to improve the quality of life outcomes.

Sincerely,

Vivian Perez, MPA
APC Environmental Coordinator

2016 PEIR

From: Joyce Dillard <dillardjoyce@yahoo.com>
Sent: Tuesday, April 7, 2015 4:27 PM
To: 2016 PEIR
Subject: Comments SCAG PEIR 2016-2040 RTPSCS due 4.7.2015

YOU STATE:

2016 RTP/SCS Policies and Performance Measures

- *Transportation investments shall be based on SCAG's adopted Regional Performance Indicators.*
- *Ensuring safety, adequate maintenance, and efficiency of operations on the existing multi-modal transportation system should be the highest RTP priorities for any incremental funding in the region.*
- *RTP land-use and growth strategies in the RTP will respect local input and advance smart growth initiatives.*
- *Transportation Demand Management (TDM) and non-motorized transportation will be focus areas.*
- *High-Occupancy Vehicle (HOV) gap closures that significantly increase transit and rideshare usage will be supported and encouraged.*
- *Monitoring progress on all aspects of the Plan, including the timely implementation of projects, programs, and strategies, will be an important and integral component of the 2016 Plan.*

and

The adopted guidelines include a requirement for program level performance measures, which include objective criteria that reflect the goals and objectives of the RTP. In addition, the initial years of the plan must be consistent with the FTIP.

COMMENTS:

According to our notes for the 2015 FTIP:

FTIP expenditures are categorized by function into three broad industries:

- construction,
- transit operations, and
- architectural and engineering services

Highway operations and maintenance expenditures are included with construction given their similarity.

We are not clear how program level performance measures will be chosen and executed considering the overlap of agencies involved. Since you are LEAD AGENCY for this PEIR, and other agencies are LEAD AGENCIES for the individual projects in the FTIP

across the many county jurisdictions, who is ultimately responsible. FTIP covers COUNTY TRANSIT COMMISSIONS that are responsible for:

- Highway
- Local arterial
- Bridge
- Public transit
- Rail
- Bicycle
- Pedestrian
- Safety
- Maintenance
- Operational
- Planning projects

We find that some of the responsibilities will be covered by CALTRANS, or CITY or COUNTY GOVERNMENTS. How as you, the LEAD AGENCY, plan to substantiate program performance measures.

YOU STATE:

2016 RTP/SCS Goals

- *Maximize mobility and accessibility for all people and goods in the region*
- *Ensure travel safety and reliability for the people and goods in the region*
- *Preserve and ensure a sustainable regional transportation system*
- *Maximize the security of the regional transportation system through improved monitoring, recovery planning, and coordination with other security agencies*
- *Maximize the productivity of our transportation system*
- *Protect the environment, improve air quality and promote energy efficiency*
- *Encourage land use and growth patterns that complement our transportation investments*

And

Pursuant to SB 375, SCAG's SCS is required to meet reduction targets for greenhouse gas (GHG) emissions by 8 percent per capita by 2020 and 13 percent per capita by 2035 compared to 2005, as set by the California Air Resources Board (ARB). According to Section 65080(b)(2)(B) of the California Government Code, the SCS must:

- *Identify existing land use;*
- *Identify areas to accommodate long-term population growth;*
- *Identify areas to accommodate an **eight-year projection of regional housing needs**;*
- *Identify transportation needs and the planned transportation network,*
- *Consider resource areas and farmland;*
- *Consider state housing goals and objectives;*
- *Set forth a forecasted growth and development pattern; and*

- *Comply with federal law for developing an RTP.*

COMMENTS:

Land use is not a function of this body, but a function of the GENERAL PLANS in form of the COMMUNITY PLANS for the urban areas. HOUSING ELEMENTS are also under the purview of the local governments.

You estimation for the RHNA has no assignment to the LAND USE ELEMENT in the GENERAL PLANS. Your results are divided by cities, not PLANNING AREAS.

We are missing the nexus between LAND USE and GREENHOUSE GAS EMISSIONS REDUCTIONS. The infrastructure may be deteriorated and cannot sustain increased populations in TOD Transit Oriented Districts, yet there is an assumption that building such projects produce the desired result. Missing is the analysis showing increased congestion in traffic due to density, increased vehicle idling and possible increase in GREENHOUSE GASES.

YOU STATE:

*In addition, SCAG is required to submit to ARB the SCS developed as part of the RTP for the purpose of determining whether the GHG emissions reduction targets have been met. Furthermore, SB 375 specifically states that the **SCS developed as part of the RTP cannot dictate local General Plan policies.***

And

*Rather, **SB 375 is intended to provide a regional policy foundation that local government may build upon if they so choose** and generally includes the quantitative growth projections from each city and county in the region going forward.*

And

The 2016 RTP/SCS is currently being envisioned to include a set of key categories of performance measures as follows:

- *Location efficiency*
- *Mobility and accessibility*
- *Safety and health*
- *Environmental quality*
- *Economic well-being*
- *Investment effectiveness*
- *System sustainability*

COMMENTS:

These performance measures cannot encompass any sense of reality of functional government when the governments who have the legal authority under the State yet

have an option to ignore these plans and, ultimately, the responsibility to State compliance.

YOU STATE:

As part of the 2016 RTP/SCS planning process, SCAG is developing a suite of transportation and land use scenarios for public consideration. These scenarios focus on transportation and land use related inputs that are modified to vary across four (4) scenarios.

And

The Preliminary 2016 RTP/SCS Scenario Planning Matrix outlines a number of plan elements that together build a framework for comparing potential regional scale choices on issues such as land use development patterns, transportation investments, transportation demand management/transportation system management (TDM/TSM), and technological innovations.

COMMENTS:

Models only work with data both factual and applicable under any scenario. Please set up the parameters for the Scenario Planning Matrix. Four models may not be sufficient to cover the vast area under your jurisdiction.

Bottom-up Local Growth and Land Use Input Process seems to be about communication not data.

YOU STATE:

Scope of Environmental Effects

- *Aesthetics and Views*
- *Agriculture and Forestry Resources*
- *Air Quality*
- *Biological Resources and Open Space*
- *Cultural Resources*
- *Energy*
- *Geology, Soils and Mineral Resources*
- *Greenhouse Gas Emissions and Climate Change*
- *Hazards and Hazardous Materials*
- *Hydrology and Water Resources*
- *Land Use and Planning*
- *Noise*
- *Population, Employment, and Housing*
- *Recreation*
- *Transportation, Traffic, and Safety*
- *Public Services and Utilities*

COMMENTS:

Please include Watershed Health and permit compliance in these reviews. Though each region is governed by a local State Regional Water Quality Control Board, the compliance issues can be costly when a region has more TMDLs Total Daily Maximum Load compliance issues as well as Wastewater issues.

Groundwater is important during this Declared Drought. Those aspects of decreased water should be considered in land and transportation issues.

CIRCULATION ELEMENT requirements in **Government Code Section 65302 (b)** are:

*(b) (1) A circulation element consisting of the general location and **extent of existing and proposed major thoroughfares, transportation routes, terminals, any military airports and ports, and other local public utilities and facilities, all correlated with the land use element of the plan.***

*(2) (A) Commencing January 1, 2011, upon any substantive revision of the circulation element, the legislative body shall modify the circulation element to plan for a balanced, multimodal transportation network that meets the needs of all users of streets, roads, and highways for **safe and convenient travel** in a manner that is suitable to the rural, suburban, or urban context of the general plan.*

(B) For purposes of this paragraph, "users of streets, roads, and highways" mean bicyclists, children, persons with disabilities, motorists, movers of commercial goods, pedestrians, users of public transportation, and seniors.

YOU STATE:

PRELIMINARY 2016 RTP/SCS ALTERNATIVES

(1) No Project

(2) Refined 2012 RTP/SCS Alternative

(3) Intensified Transportation and Land Use Integration Alternative.

COMMENTS:

Any Alternative presented **MUST** have the condition of the infrastructure, capital needs assessment (outside of those stated in the FTIP) and economic analysis.

**RE: Comments to Notice of Preparation of a Program Environmental Impact Report
for the 2016-2040 Regional Transportation Plan/Sustainable Communities Strategy**

Dear Ms. Lijin:

As a complement to observations we provided in the recent Southern California of Governments Environmental Justice Workshop for the 2016-2040 Regional Transportation Plan/Sustainable Communities Strategy (2016 RTP/SCS) held on November 20, 2014, we would like to submit these comments on the Notice of Preparation (NOP) of a Program Environmental Impact Report (PEIR) for the 2016 RTP/SCS. We welcome the opportunity to discuss the following recommendations in person.

Analyze and address the impacts of scenarios on low income communities and communities of color to ensure that the benefits and burdens of the RTP/SCS are fairly distributed.

According to state law, “environmental justice” means the equitable treatment of people of all races, cultures, and incomes with respect to the development, adoption, implementation, and enforcement of environmental laws, regulations, and policies. (Gov. Code, § 65040.12, subd. (e).)

Fairness, in the context of the 2016 RTP/SCS, means the *benefits* of a healthy environment should be available to all residents of the SCAG region, and the *burdens* of inequitable investments should not be focused on sensitive populations or on communities that already are experiencing its adverse effects.¹ “Environmental justice cannot be achieved . . . simply by adopting generalized policies and goals. Instead, environmental justice requires an ongoing commitment to identifying existing and potential problems, and to finding and applying solutions, both in approving specific projects and planning for future development.”²

The NOP of the PEIR should, for each scenario, including the “no build baseline” scenario, explicitly and robustly identify, analyze, and address the impacts of the scenario on low income communities

¹ Kamala D. Harris, Attorney General, *Environmental Justice at the Local and Regional Level*, available at: http://oag.ca.gov/sites/all/files/pdfs/environment/ej_fact_sheet.pdf.

² *Id.*

and communities of color, specifically disaggregating analysis per SCAG sub-regions with particular focus on small urban and rural communities within SCAG boundaries.

Such an analysis should include the impacts and benefits of each scenario, disaggregated by race, income and geography related to: access to transit, high transportation and housing cost burdens, lack of affordable housing (or poor jobs-housing fit), risk of direct and indirect displacement, and other public health factors (including those related to air quality, access to active transportation, and related chronic diseases).

Ensure that the tools and models used to analyze the PEIR alternatives are sensitive to differences among the behaviors of and the scenario/policy impacts on low-income people and people of color, and adopt appropriate mitigation measures to address these differences.

The PEIR must account in its analysis for the differences in behaviors, housing opportunities and transportation needs (including transportation to work) among different economic and racial segments of the population and between and among different geographical areas within SCAG boundaries.

If the modeling tools used to analyze the 2016 RTP/SCS scenarios do not account for the differences in vehicle miles traveled (VMT) among different economic and racial segments of the population, the environmental impacts of the scenarios, such as affordable housing distribution, anti-displacement policies, and inadequate transit, could not be accurately measured or considered in the PEIR. This may not only lead to inaccuracies in determining the significance of impacts, it would overlook several of the policy priorities that should be adopted in the SCAG 2016 RTP/SCS update and limit performance targets and equity analysis measures.

The PEIR and its tools should take into account such issues and the following factors, among others:

- The impact of the reliability, accessibility and affordability of transit for disadvantaged communities disaggregated by sub-region.
- The sprawl-inducing impacts of the suite of transportation and land use scenarios for the 2016 RTP/SCS, with specific focus on the environmental impacts resulting from leap-frogging of low-income residents to the outer suburbs, particularly from coastal sub-regions to the Inland Empire.
- The VMT of lower-income residents in affordable housing, which tends to be lower than the VMT of more affluent auto-owning residents, disaggregated per sub-region as well as between small and rural communities.
- Jobs-housing fit of each scenario by income level and geographic location to determine whether the plan indeed encourages development of workforce housing that would reduce VMT and GHG emissions.

Such an analysis will ensure the environmental impacts of 2016 RTP/SCS attributes will be accurately measured and considered in the PEIR.

Conduct as part of the EIR a Health Impact Assessment to study the health impacts of the proposed scenarios specifically on disadvantaged communities.

SCAG should conduct a Health Impact Assessment (HIA) as a component of the PEIR.³ We recommend that the assessment focus specifically on the differential impacts on and potential benefits for more affluent, urban communities in SCAG's region as compared to low income communities and communities of color, specifically per sub region as well as small urban and rural communities.

Such an HIA would help SCAG identify appropriate actions to understand and address differential impacts and benefits of the 2016 RTP/SCS. SCAG should also consider and identify mitigations for the public health effects and disparities related to transit connectivity (reliability, accessibility, and affordability), availability of affordable housing (including the amount of affordable housing in healthy and high-opportunity areas), and displacement risk.

Ensure that the PEIR analyses the regional differences in the SCAG region.

The SCAG region is a diverse region that includes both rural and urban communities, and areas with well-developed transit and active transportation networks and those without. Accordingly the PEIR should:

- Regional Performance Indicators should be dis-aggregated by sub region and small urban and rural geographies.
- Regional performance indicators should be assessed for sub-region and both rural and urban regions and communities.
- The impacts of proposed large scale growth on existing lower income communities with respect to infrastructure, housing, access to water.

Include Environmental Justice Performance Measures to the core performance measures for the 2016-2040 RTP/SCS and include them in the PEIR.

The Environmental Justice Performance Measures are important to other RTP goals; specifically to improving prosperity and health outcomes for all residents. The inclusion of the EJ performance measures as a core RTP measure reflects their importance to advancing greater equity in the region. Furthermore, SCAG should identify disadvantaged communities' burdened by environmental justice issues and develop a project list that would mitigate such impacts.

Given the specific environmental justice challenges facing the region's rural communities, the performance measures should be stratified by and separately address rural areas, and provide separate analysis of each measure in these areas.

The Environmental Justice Performance Measures should include, but not limited to, the following:

- Analyze specific geographic areas and provide analysis over time. Use San Francisco Bay Area's "Communities of Concern" as a model. (<http://onebayarea.org/plan-bay-area/plan-elements/equity-analysis.html> , <http://geocommons.com/maps/118675>)

³ An HIA is a "combination of procedures, methods and tools that systematically judges the potential, and sometimes unintended, effects of a policy, plan, program or project on the health of a population and the distribution of those effects within the population." See Gothenburg consensus statement. See U.S. Centers for Disease Control and Prevention, *Health Impact Assessment*, available at: <http://www.cdc.gov/healthyplaces/hia.htm>.

- Supplement regional maps with local scale maps (at least on-line). Only using data at the county scale obscures the disparate impacts that happen within counties, when the EJ Analysis is aimed at identifying disparate impacts.
- Provide analysis. Maps and charts are no substitute for calling out trends, to identify both success and areas of concern.

Study the Jobs, Health and Quality of Life Scenario as one of the 2016 RTP/SCS PEIR scenarios.

We will continue to work with SCAG staff to develop this alternative. In order to ensure that this alternative is given adequate consideration, we request that we have equal opportunity to use the modeling tools to iteratively develop the Jobs, Health and Quality of Life Scenario that the other alternatives will be given.

* * * * *

We welcome sustained collaboration with SCAG and will continue to engage in all stakeholder processes about the 2016 RTP/SCS and we look forward to seeing our comments addressed in the PEIR.

Thank you for your consideration,

Michele Hasson

**Subject: Program Environmental Impact Report for the 2016-2040 Regional
Transportation/Sustainable Communities Strategy**

Dear Ms. Sun:

The Mojave Desert Air Quality Management District (MDAQMD) has received the request for comments for the Program Environmental Impact Report for the 2016-2040 Regional Transportation/Sustainable Communities Strategy (RTP/SCS). The RTP/SCS is a long-range transportation plan that provides for a vision for regional transportation investments over a 20-year period. The RTP/SCS is updated every four years to reflect changes to the transportation network, the most recent planning assumptions, economic trends, and population and jobs growth forecasts.

The MDAQMD has reviewed the Notice of Preparation for the RTP/SCS and concurs with the proposed analysis of potential impacts in the Air Quality section. MDAQMD Designations and Classifications are available at http://www.mdaqmd.ca.gov/rules_plans/documents/CEQAGuidelines.pdf.

If you have any questions regarding this letter, please contact me at (760) 245-1661, extension 6726, or Tracy Walters at extension 6122.

Sincerely,

RE: Comments on the Notice of Preparation of a Program Environmental Impact Report for the 2016-2040 Regional Transportation Plan/Sustainable Communities Strategy

Dear Ms. Sun:

The Orange County Council of Governments (OCCOG) appreciates the opportunity to review and provide comments on the Notice of Preparation of a Program Environmental Impact Report (PEIR) for the 2016-2040 Regional Transportation Plan/Sustainable Communities Strategy (2016-2040 RTP/SCS). OCCOG is requesting that SCAG staff consider the following comments during the preparation of the PEIR.

1. SCAG shall limit mitigation measures included in the PEIR for the 2016-2040 RTP/SCS to issues that are within SCAG's purview. All measures related to issues SCAG does not have the purview to implement shall be included in an appendix of the RTP/SCS that can be used by local jurisdictions, local agencies, and project sponsors as a menu of options or toolbox of strategies.
2. The PEIR for the 2016-2040 RTP/SCS shall not include any mitigation measures that are duplicative of existing regulations administered by or under the jurisdiction of other agencies. For each impact already administered by or under another agency, SCAG could add the language "Local jurisdictions, agencies, and project sponsors should comply, as applicable with existing federal, state, and local laws and regulations."
3. SCAG shall ensure that documentation is provided in the PEIR for all mitigation measures deemed feasible.

The OCCOG appreciates your consideration of the comments provided in this letter. It is a shared goal to develop and adopt a Regional Transportation Plan and Sustainable Communities Strategy that represents the best in regional planning developed collaboratively with local jurisdictions and stakeholders in a manner that is credible and defensible on all levels. The OCCOG looks forward to working with the Southern California Association of Governments to achieve this goal.

Sincerely,

A handwritten signature in blue ink that reads "Art Brown". The signature is fluid and cursive, with the first name "Art" being more prominent.

Honorable Art Brown
Chair OCCOG Board of Directors

Re: **Notice of Preparation for the 2016-2040 Regional Transportation Plan/
Sustainable Communities Strategy Program Environmental Impact
Report**

Dear Ms. Sun:

The Orange County Transportation Authority (OCTA) appreciates the opportunity to review and comment on the Notice of Preparation of the 2016-2040 Regional Transportation Plan/Sustainable Communities Strategy (RTP/SCS) Program Environmental Impact Report (PEIR). OCTA thanks you in advance for taking full consideration of the comments provided below.

OCTA understands the purpose of the PEIR as a broad-level analysis of the entirety of the program of projects, policies, and strategies that are being considered as part of the financially constrained plan, and viable alternatives. Regarding the selection of the alternatives to be analyzed as part of the PEIR, the 2012-2035 RTP/SCS PEIR states, "Alternatives that are considered remote or speculative, or whose effects cannot be reasonably predicted do not require consideration". Based on our understanding of the purpose of the PEIR, and to be consistent with past PEIR practice, OCTA makes the following request:

The 2016-2040 RTP/SCS financially constrained alternatives should accurately reflect the projects submitted by the county transportation commissions (commissions). Furthermore, as discussed between the commissions and the Southern California Association of Governments (SCAG) staff, projects from the financially unconstrained (Strategic Plan) project submittals should not be modeled, or otherwise analyzed for performance or impacts, as part of this RTP/SCS or PEIR because they are conceptual and require further study prior to modeling.

As for the process to develop the alternatives, Scenario 2 is described as a technical update to the 2012 RTP/SCS, which includes the strategies that allowed the 2012 RTP/SCS to demonstrate conformity with air quality emission budgets, financial constraint, greenhouse gas emission reduction targets, and system preservation goals. OCTA understands that SCAG must perform scenario planning and consider stakeholder input in the development of the 2016-2040 RTP/SCS and PEIR,

Ms. Lijin Sun
April 7, 2015
Page 2

but the strategies and efforts that went into the 2012-2035 RTP/SCS should also be recognized as effective yet challenging at the same time. Therefore, we encourage SCAG to take advantage of performance gains provided by Scenario 2 as Scenarios 3 and 4 are developed. For this reason OCTA requests that:

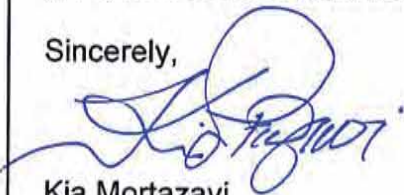

The model results from the currently proposed Scenario 2 should be shared with the commissions and the members of the SCAG Technical Working Group at the earliest opportunity, and goals or strategies that go beyond Scenario 2 should only be discussed in general terms as potential opportunities or enhancements until after these results have been discussed with the noted parties.

Finally, OCTA agrees that the PEIR should not analyze performance and/or environmental impacts at the project-level. As the Notice for Preparation states, "Project-level environmental analysis should appropriately be prepared by implementing agencies on a project-by-project or site-by-site basis as projects proceed through the design and decision-making process". However, OCTA recommends emphasizing the following:

Provide clear language explaining that utilizing the PEIR as a first-tier document in the preparation of any subsequent project-specific or site-specific environmental analyses is at the discretion of the implementing agencies.

Once again, thank you for the opportunity to provide comments on the Notice of Preparation for the 2016-2040 RTP/SCS PEIR. In addition, OCTA appreciates SCAG's willingness to discuss and consider suggestions from partner agencies in the RTP/SCS development process. If you have any questions regarding the comments above, please contact Greg Nord, Senior Transportation Analyst, at (714) 560-5885 or gnord@octa.net.

Notice of Preparation

March 9, 2015

To: Reviewing Agencies

Re: 2016-2040 Regional Transportation Plan/Sustainable Communities Strategy
SCH# 2015031035

Attached for your review and comment is the Notice of Preparation (NOP) for the 2016-2040 Regional Transportation Plan/Sustainable Communities Strategy draft Environmental Impact Report (EIR).

Responsible agencies must transmit their comments on the scope and content of the NOP, focusing on specific information related to their own statutory responsibility, within 30 days of receipt of the NOP from the Lead Agency. This is a courtesy notice provided by the State Clearinghouse with a reminder for you to comment in a timely manner. We encourage other agencies to also respond to this notice and express their concerns early in the environmental review process.

Please direct your comments to:

Ms. Lijin Sun
Southern California Association of Governments
818 W. 7th Street; 12th Floor
Los Angeles, CA 90017-3435

with a copy to the State Clearinghouse in the Office of Planning and Research. Please refer to the SCH number noted above in all correspondence concerning this project.

If you have any questions about the environmental document review process, please call the State Clearinghouse at (916) 445-0613.

Sincerely,

Scott Morgan
Director, State Clearinghouse

**Notice of Preparation of a CEQA Document for the
2016-2014 Regional Transportation Plan/ Sustainability Communities Strategy Project**

The South Coast Air Quality Management District (SCAQMD) staff appreciates the opportunity to comment on the above-mentioned document. The SCAQMD staff's comments are recommendations regarding the analysis of potential air quality impacts from the proposed project that should be included in the draft CEQA document. Please send the SCAQMD a copy of the CEQA document upon its completion. Note that copies of the Draft EIR that are submitted to the State Clearinghouse are not forwarded to the SCAQMD. Please forward a copy of the Draft EIR directly to SCAQMD at the address in our letterhead. **In addition, please send with the draft EIR all appendices or technical documents related to the air quality and greenhouse gas analyses and electronic versions of all air quality modeling and health risk assessment files. These include original emission calculation spreadsheets and modeling files (not Adobe PDF files). Without all files and supporting air quality documentation, the SCAQMD will be unable to complete its review of the air quality analysis in a timely manner. Any delays in providing all supporting air quality documentation will require additional time for review beyond the end of the comment period.**

Air Quality Analysis

The SCAQMD adopted its California Environmental Quality Act (CEQA) Air Quality Handbook in 1993 to assist other public agencies with the preparation of air quality analyses. The SCAQMD recommends that the Lead Agency use this Handbook as guidance when preparing its air quality analysis. Copies of the Handbook are available from the SCAQMD's Subscription Services Department by calling (909) 396-3720. More recent guidance developed since this Handbook was published is also available on SCAQMD's website here: [http://www.aqmd.gov/home/regulations/ceqa/air-quality-analysis-handbook/ceqa-air-quality-handbook-\(1993\)](http://www.aqmd.gov/home/regulations/ceqa/air-quality-analysis-handbook/ceqa-air-quality-handbook-(1993)). SCAQMD staff also recommends that the lead agency use the CalEEMod land use emissions software. This software has recently been updated to incorporate up-to-date state and locally approved emission factors and methodologies for estimating pollutant emissions from typical land use development. CalEEMod is the only software model maintained by the California Air Pollution Control Officers Association (CAPCOA) and replaces the now outdated URBEMIS. This model is available free of charge at: www.caleemod.com.

The Lead Agency should identify any potential adverse air quality impacts that could occur from all phases of the project and all air pollutant sources related to the project. Air quality impacts from both construction (including demolition, if any) and operations should be calculated. Construction-related air quality impacts typically include, but are not limited to, emissions from the use of heavy-duty equipment from grading, earth-loading/unloading, paving, architectural coatings, off-road mobile sources (e.g., heavy-duty construction equipment) and on-road mobile sources (e.g., construction worker vehicle trips, material transport trips). Operation-related air quality impacts may include, but are not limited to, emissions from stationary sources (e.g., boilers), area sources (e.g., solvents and coatings), and vehicular trips (e.g., on- and off-road tailpipe emissions and entrained dust). Air quality impacts from indirect sources, that is, sources that generate or attract vehicular trips should be included in the analysis.

The SCAQMD has also developed both regional and localized significance thresholds. The SCAQMD staff requests that the lead agency quantify criteria pollutant emissions and compare the results to the recommended regional significance thresholds found here: <http://www.aqmd.gov/docs/default-source/ceqa/handbook/scaqmd-air-quality-significance-thresholds.pdf?sfvrsn=2>. In addition to analyzing regional air quality impacts, the SCAQMD staff recommends calculating localized air quality impacts and comparing the results to localized significance thresholds (LSTs). LST's can be used in addition to the recommended regional significance thresholds as a second indication of air quality impacts

when preparing a CEQA document. Therefore, when preparing the air quality analysis for the proposed project, it is recommended that the lead agency perform a localized analysis by either using the LSTs developed by the SCAQMD or performing dispersion modeling as necessary. Guidance for performing a localized air quality analysis can be found at: <http://www.aqmd.gov/home/regulations/ceqa/air-quality-analysis-handbook/localized-significance-thresholds>.

In the event that the proposed project generates or attracts vehicular trips, especially heavy-duty diesel-fueled vehicles, it is recommended that the lead agency perform a mobile source health risk assessment. Guidance for performing a mobile source health risk assessment ("*Health Risk Assessment Guidance for Analyzing Cancer Risk from Mobile Source Diesel Idling Emissions for CEQA Air Quality Analysis*") can be found at: <http://www.aqmd.gov/home/regulations/ceqa/air-quality-analysis-handbook/mobile-source-toxics-analysis>. An analysis of all toxic air contaminant impacts due to the use of equipment potentially generating such air pollutants should also be included.

In addition, guidance on siting incompatible land uses (such as placing homes near freeways) can be found in the California Air Resources Board's *Air Quality and Land Use Handbook: A Community Perspective*, which can be found at the following internet address: <http://www.arb.ca.gov/ch/handbook.pdf>. CARB's Land Use Handbook is a general reference guide for evaluating and reducing air pollution impacts associated with new projects that go through the land use decision-making process.

Mitigation Measures

In the event that the project generates significant adverse air quality impacts, CEQA requires that all feasible mitigation measures that go beyond what is required by law be utilized during project construction and operation to minimize or eliminate these impacts. Pursuant to state CEQA Guidelines §15126.4 (a)(1)(D), any impacts resulting from mitigation measures must also be discussed. Several resources are available to assist the Lead Agency with identifying possible mitigation measures for the project, including:

- Chapter 11 of the SCAQMD *CEQA Air Quality Handbook*
- SCAQMD's CEQA web pages at: <http://www.aqmd.gov/home/regulations/ceqa/air-quality-analysis-handbook/mitigation-measures-and-control-efficiencies>.
- CAPCOA's *Quantifying Greenhouse Gas Mitigation Measures* available here: <http://www.capcoa.org/wp-content/uploads/2010/11/CAPCOA-Quantification-Report-9-14-Final.pdf>.
- SCAQMD's Rule 403 – Fugitive Dust, and the Implementation Handbook for controlling construction-related emissions
- Other measures to reduce air quality impacts from land use projects can be found in the SCAQMD's Guidance Document for Addressing Air Quality Issues in General Plans and Local Planning. This document can be found at the following internet address: <http://www.aqmd.gov/docs/default-source/planning/air-quality-guidance/complete-guidance-document.pdf?sfvrsn=4>.

Data Sources

SCAQMD rules and relevant air quality reports and data are available by calling the SCAQMD's Public Information Center at (909) 396-2039. Much of the information available through the Public Information Center is also available via the SCAQMD's webpage (<http://www.aqmd.gov>).

The SCAQMD staff is available to work with the Lead Agency to ensure that project emissions are accurately evaluated and mitigated where feasible. If you have any questions regarding this letter, please contact me at Jwong1@aqmd.gov or call me at (909) 396-3176.

Sincerely,

Jillian Wong

Subject: Request for Review of Notice of Preparation of a Program Environmental
Impact Report for the 2016-2040 Regional Transportation
Plan/Sustainable Communities Strategy

Dear. Ms. Sun,

Air Pollution Control District staff has reviewed the subject notice of preparation for a program environmental impact report for a long-range transportation plan that provides a vision for regional transportation investments over a 20-year period. The Regional Transportation Plan/Sustainable Communities Strategy will be a blueprint for the region's growth through 2040 and will outline the region's goals, policies and strategies that improve the balance between land use and transportation systems, both current and future. We concur with the inclusion of air quality, greenhouse gas emissions and climate change as potential environmental effects that warrant analysis in the program environmental impact report. We look forward to reviewing the air quality, greenhouse gases and climate change chapters of the draft program environmental impact report.

Thank you for the opportunity to review this project. If you have any questions, please call me at (805) 645-1426.

Sincerely,

Alicia Stratton
Air Quality Specialist
Planning, Rules and Incentives Division

TRANSPORTATION SYSTEMS PROJECT LIST

SOUTHERN CALIFORNIA ASSOCIATION OF GOVERNMENTS

APPENDIX
DRAFT DECEMBER 2015

FRAMEWORK	1
FTIP PROJECTS	2
FINANCIALLY-CONSTRAINED RTP PROJECTS	100
ADDITIONAL TRANSPORTATION SYSTEMS MANAGEMENT (TSM) PROJECTS (INCLUDED IN RTP ID 7120005)	327
STRATEGIC PROJECTS	331

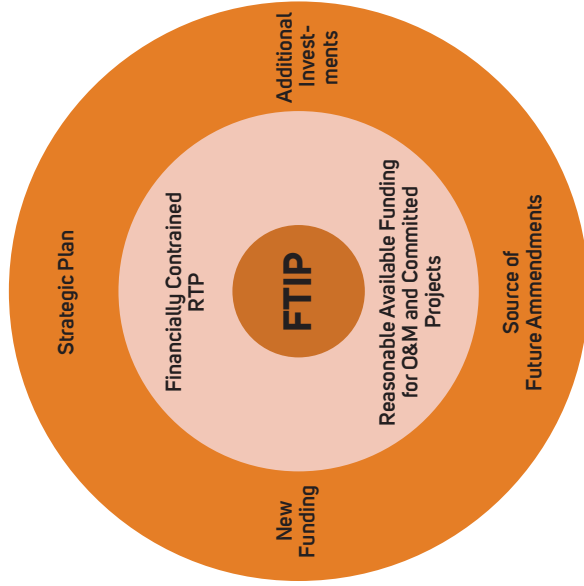

PROJECT LIST

FRAMEWORK

The project list is divided into three sections, consistent with the framework in FIGURE 1. At the center is the Federal Transportation Improvement Program (FTIP), which forms the foundation of the RTP project investment strategy and represents the first six years of already-committed funding. This RTP incorporates the adopted 2015 FTIP. The RTP contains an additional financially constrained set of transportation projects above and beyond the FTIP. Finally, the Strategic Plan represents an unconstrained list of potential projects that the region would pursue given additional funding and commitment.

IMPERIAL	TRANSIT	IMP50303	0	1 REPLACEMENT BUSES, TYPE III AND EQUIPMENT PURCHASE. TOLL CREDITS USED AS MATCH FOR 5310 FUNDS: \$30 IN FY14/15 FOR CON	\$78
IMPERIAL	TRANSIT	IMP301004	0	COUNTY WIDE TRANSIT SYSTEM - IVT GOLD LINE - CAPITAL AND OPERATIONAL ASSISTANCE	\$749
IMPERIAL	TRANSIT	IMP33003	0	ADA PARATRANSIT SERVICE OPERATING ASSISTANCE	\$22,336
LOS ANGELES	LOCAL HIGHWAY	LA F5302	0	PROJECT WILL UPGRADE THE CURRENT TRAFFIC CONTROL SYSTEM TO AN ADAPTIVE TRAFFIC CONTROL SYSTEM (ATCS). PROJECT WILL REPLACE 90 TYPE 170 CONTROLLERS WITH TYPE 2070, ADD ADDITIONAL VEHICLE DETECTORS AT 102 LOCATIONS, AND UPGRADE COMMUNICATIONS EQUIPMENT AND CONNECTION TO FIBER-OPTIC BACKBONE. THE ATCS WILL CONTROL 102 INTERSECTIONS THROUGHOUT CULVER CITY.	\$1,475
LOS ANGELES	LOCAL HIGHWAY	LA F7303	0	NETWORK-WIDE SIGNAL SYNC WITH VID & ARTERIAL PERFORMANCE MEASUREMENT SYSTEM FOR ATCS: (1) OPTIMIZES SIGNAL COORDINATION/TIMING NETWORK-WIDE. (2) UPGRADES MAJOR INTERSECTIONS WITH ENHANCED SYSTEM DETECTION AND ARTERIAL PERFORMANCE MEASUREMENT CAPABILITIES ALONG WASHINGTON BL, SEPULVEDA BL, JEFFERSON BL, AND OTHERS.	\$1,236
LOS ANGELES	LOCAL HIGHWAY	LA F7507	0	BALLONA CREEK BIKE PATH CONNECTIVITY PROJECT AT HIGUERA BRIDGE: (1) INSTALLS NEW ACCESS RAMP (300 FT) FROM THE HIGUERA ST BRIDGE TO THE EXISTING BALLONA CREEK BIKE PATH WITH WAYFINDING SIGNAGE.	\$822
LOS ANGELES	LOCAL HIGHWAY	LA F3317	0	BUS SIGNAL PRIORITY IN CULVER CITY. DESIGN, DEVELOP & INSTALL WIRELESS BUS SIGNAL PRIORITY SYSTEM ON CULVER CITY BUS FLEET AND AT INTERSECTIONS TO INCREASE OPERATION EFFICIENCY & TRAVEL TIME SAVINGS. THE PROJECT INCLUDES INTERSECTIONS WITH TRANSIT SERVICE WITHIN THE BOUNDARY OF THE CITY OF CULVER CITY.	\$2,751
LOS ANGELES	LOCAL HIGHWAY	LA 06918	0	STEEP CANYON TRAILHEAD CONNECTOR TO THE CANYON LOOP TRAIL - RECOMMENDED FOR FUNDING UNDER THE NON-MOTORIZED ELEMENT OF THE RECREATIONAL TRAILS PROGRAM (GRANT AWARD \$153,915) REHABILITATE 850 LF OF TRAIL INCLUDING LANDSCAPE TIE STEPS.	\$210
LOS ANGELES	LOCAL HIGHWAY	LA F7300	0	DIAMOND BAR ADAPTIVE TRAFFIC CONTROL SYSTEM PROJECT: INSTALLS ADAPTIVE TRAFFIC CONTROL SYSTEM (ATCS) AT SIGNALIZED INTERSECTIONS ON DIAMOND BAR BL, GOLDEN SPRINGS DR, AND GRAND AV. (2) PROVIDES FULLY TRAFFIC RESPONSIVE SIGNAL CONTROL SYSTEM BASED ON TRAFFIC DEMANDS.	\$1,760
LOS ANGELES	LOCAL HIGHWAY	LA 06110	0	THE PROJECT INVOLVES THE DESIGN AND CONSTRUCTION MANAGEMENT OF INTERSECTION IMPROVEMENTS AT LAKEWOOD BOULEVARD/ROSEMEAD BOULEVARD AT TELEGRAPH ROAD. PROJECT IS ADDING DEDICATED RIGHT AND LEFT TURN LANES AT THE INTERSECTION. ALL LANES ARE ADDING UNDER 400' IN LENGTH.	\$2,120
LOS ANGELES	LOCAL HIGHWAY	LA E0479	0	FIRESTONE BLVD. FROM RYERSON AVE AND STEWART & GRAY RD. WIDEN SECTIONS OF FIRESTONE (BOTTLENECK FOR TURN LANES, ST RECONSTRUCTION, REHAB, & RESURFACE; & UPGRADE HANDICAP RAMPS	\$2,000
LOS ANGELES	LOCAL HIGHWAY	LA E1633	0	STUDY REPORT FOR THE INTER. OF OLD RIVER SCHOOL RD, FIRESTONE BLVD & UNION PACIFIC RAILROAD. REVIEW/ANALYZE OPERATIONS & SAFETY ASPECTS, DESIGN OPTIONS ETC. (E/P & P/S/E ONLY)	\$500
LOS ANGELES	LOCAL HIGHWAY	LA E2293	0	PARAMOUNT BLVD FROM GARNDENDALE ST AND TELEGRAPH RD -- ITS IMPROVEMENTS AS WELL AS MINOR WIDENING AT CRITICAL INTERSECTIONS TO ALLOW FOR SAID IMPROVEMENTS (NON-CAPACITY).	\$1,904
LOS ANGELES	LOCAL HIGHWAY	LA F1120	0	PARAMOUNT BL AT FIRESTONE BL IMPROVEMENTS. RECONSTRUCT CURB RETURNS AT EACH OF THE 4 CORNERS WITH 50' TURNING RADIUS. CONSTRUCT DOUBLE LEFT-TURN LANES AND EASTBOUND RIGHT-TURN POCKET ON FIRESTONE BLVD, STRIPE 3RD EB LANE AND MODIFY TRAFFIC SIGNAL SAFETY PROJECT TO ELIMINATE BOTTLENECK AT INTERSECTION.	\$3,695
LOS ANGELES	LOCAL HIGHWAY	LA F3114	0	LAKEWOOD BOULEVARD PHASE 3 IMPROVEMENTS. WIDEN TO PROVIDE 3 LANES IN EACH DIRECTION & 50 CURB RETURNS AT INTERSECTIONS. RECONSTRUCT INFRASTRUCTURE TO EXTEND LIFE BY 50 YEARS. REPLACE LANDSCAPING, LIGHTING, & TRAFFIC SIGNALS. PROJECT WILL GO FROM 4 TO 6 LANES	\$7,778
LOS ANGELES	LOCAL HIGHWAY	LA F3304	0	WOODRUFF AV FIBER-OPTIC TRAFFIC SIGNAL COMMUNICATIONS PROJ.1. INSTALL FIBER-OPTIC COMMUNICATION & VIDEO DETECTION SYSTEM ON WOODRUFF AV & INTERCONNECT IT TO EXISTING FIBER BACKBONE TO DEVELOP AN ETHERNET-BASED COMMUNICATION NETWORK.	\$923

TABLE 1 FTIP Projects - Continued

County	System	FTIP ID	Route #	Description	Project Cost (\$1,000's)
LOS ANGELES	LOCAL HIGHWAY	LAF3305	0	IMPERIAL HWY FIBER OPTIC TRAFFIC SIGNAL COMMUNICATIONS PROJ.1. INSTALL FIBER-OPTIC COMMUNICATION & VIDEO-DETECTION SYSTEM ON IMPERIAL HWY AND INTERCONNECT IT TO EXISTING FIBER BACKBONE TO DEVELOP AN ETHERNET-BASED COMMUNICATION NETWORK.	\$900
LOS ANGELES	LOCAL HIGHWAY	LAF514	0	TELEGRAPH ROAD, TRAFFIC THROUGHPUT AND SAFETY ENHANCEMENT BETWEEN THE RIO HONDO RIVER CHANNEL TO THE SAN GABRIEL RIVER CHANNEL, A DISTANCE OF 2.2 MILES. PROJECT INVOLVES THE CONSTRUCTION OF RAISED MEDIAN ISLANDS, MINOR WIDENING AT INTERSECTIONS, TRANSIT PRIORITY SYSTEM AND BIKE (2.2 MILES IN LENGTH) AND PEDESTRIAN CIRCULATION IMPROVEMENTS.	\$4,738
LOS ANGELES	LOCAL HIGHWAY	LAF718	0	FLORENCE AVENUE BRIDGE OVER SAN GABRIEL RIVER: (1) REPLACES UNDIVIDED 4-LANE BRIDGE ON FLORENCE AV BETWEEN LESTERFORD AV AND LITTLE LAKE RD AT THE SAN GABRIEL RIVER CROSSING WITH DUAL 45-FT-WIDE, 3-LANE BRIDGE (6 LANES TOTAL, 14 FT SEPARATION). (2) IMPROVES 200-FT APPROACHES ON EACH SIDE OF THE BRIDGE WITH WIDENED/ADA-COMPLIANT SIDEWALKS AND 2 FT WIDER SHOULDER TO IMPROVE CYCLIST SAFETY. SIDEWALKS ARE NEW. NO BIKE FACILITIES.	\$18,623
LOS ANGELES	LOCAL HIGHWAY	LAF731	0	DOWNNEY CITYWIDE TRANSIT PRIORITY SYSTEM PROGRAM: (1) SYNCHRONIZES TRAFFIC SIGNALS ALONG EXISTING TRANSIT ROUTES. (2) INSTALLS NEW FIBER OPTIC COMMUNICATION ALONG 5.5 MILES OF ARTERIAL STREETS TO CONNECT SIGNALS TO THE CENTRAL TRAFFIC MANAGEMENT CENTER. (3) INSTALLS AND INTEGRATES TRANSIT PRIORITY SYSTEM WITH THE TRAFFIC SIGNAL SYSTEM.	\$18,07
LOS ANGELES	LOCAL HIGHWAY	LA06007	0	THE MOUNTAIN AVE./DUARTE ROAD REALIGNMENT/RECONSTRUCTION, INCLUDING RE-ALIGNMENT AND RECONSTRUCTION OF A PORTION OF MOUNTAIN AVE AND DUARTE ROAD STREET PAVEMENT, RELOCATION OF STORM DRAIN STRUCTURES, REMOVAL AND REPLACEMENT OF CURB/GUTTER/SIDEWALK.	\$568
LOS ANGELES	LOCAL HIGHWAY	LAF5627	0	DUARTE GOLD LINE STATION PEDESTRIAN IMPROVEMENTS. THIS PROJECT IS LOCATED IN DUARTE ON DUARTE RD BETWEEN HIGHLAND AV AND BUENA VISTA ST. IT WILL FUND PEDESTRIAN IMPROVEMENTS AROUND THE DUARTE GOLD LINE STATION, CONNECTING THE STATION WITH SURROUNDING LAND USES AND OTHER TRANSIT LINES BY CONSTRUCTING SIDEWALK ON THE NORTH SIDE OF DUARTE RD AND INSTALLING PEDESTRIAN LIGHTING, LANDSCAPING, BENCHES, TRASH RECEPTACLES, CURB RAMPS, PEDESTRIAN CROSSINGS, AND WAYFINDING SIGNS.	\$1,646
LOS ANGELES	LOCAL HIGHWAY	LA06180	0	A 0.5 MILE CLASS III BIKE ROUTE WITH SHARROWS, A 0.7 MILE CLASS II GREEN-PAINTED BIKE LANE, AND A 2 MILE CLASS II BIKE LANE WITH BUFFER PAVEMENT STENCILING. IMPROVEMENTS INCLUDES ROADWAY RESURFACING, HIGH LIGHTING, CROSSWALK IMPROVEMENTS, CAMERA INSTALLATION AT INTERSECTIONS, AND WAYFINDING SIGNAGE. THE PROJECT RUNS 3.2 MILES ALONG SANTA ANITA FROM ELLIOT AVENUE (SOUTH) TO WEST HONDO PARKWAY (NORTH).	\$588
LOS ANGELES	LOCAL HIGHWAY	LAF504	0	EL MONTE: TRANSIT CYCLE FRIENDLY. EL MONTE PROPOSES TO IMPLEMENT THE 1ST PHASE OF THE EL MONTE BIKE-TRANSIT HUB COMPONENT (METRO BICYCLE TRANSPORTATION STRATEGIC PLAN) A COUNTYWIDE EFFORT TO IMPROVE BIKE FACILITIES	\$166
LOS ANGELES	LOCAL HIGHWAY	LAF3125	0	RAMONA CORRIDOR TRANSIT CENTER ACCESS PROJECT. CONSTRUCT A NEW UNDERPASS STRUCTURE ON RAMONA BLVD UNDER SANTA ANITA AVE TO ACCESS THE LOWER LEVEL OF THE EL MONTE TRANSIT CENTER. THE PROPOSED BUS TUNNEL RAMPS WILL BEGIN EAST OF THE SANTA ANITA AVENUE AND RAMONA BOULEVARD INTERSECTION ON RAMONA BOULEVARD AND THE TUNNEL WILL CONTINUE UNDER SANTA ANITA AVENUE (ALONG ROMONA BOULEVARD) TO THE LOWER LEVEL OF THE EL MONTE TRANSIT CENTER AND INCLUDES 1 BUS ONLY LANE IN EACH DIRECTION.	\$15,302
LOS ANGELES	LOCAL HIGHWAY	LAF5125	0	RAMONA BLVD, VALLEY BLVD, & VALLEY MALL INTERSECTION IMPROVEMENT. CITY WILL RECONFIGURE THE FIVE-WAY INTERSECTION IN ORDER TO ENHANCE THE INTERSECTION. TRAFFIC SIGNAL UPGRADE-DUAL LEFT-TURN LANES ON VALLEY BL AND RIGHT-TURN POCKETS ON RAMONA BL. CREATE ADDITIONAL CURB AREA FOR BICYCLE RACKS, PEDESTRIAN AMENITIES, BUS PADS, TURNS, AND CLASS II BIKE LANES LESS THAN 1/4 MILE.	\$2,614
LOS ANGELES	LOCAL HIGHWAY	LAF5705	0	SHARED PARKING PROGRAM/SMART PARKING DETECTION SYS IN DOWNTOWN AREA: I-10 FWY, EL MONTE BUSWAY, EL MONTE TRANSIT CTR, TRANSIT VILLAGE, AND EL MONTE METROLINK STATION. COMPREHENSIVE PARKING STRATEGY PLAN. INCLUDES SMART PARKING DETECTION SYSTEM AND SHARED PARKING PROGRAM. UTILIZE MOBILE COMMUNICATION DEVICES TO ASSESS THE PARKING AVAILABILITY AT MULTIPLE PARKING LOTS. PROVIDE REAL-TIME INVENTORY OF PARKING SPACES.	\$630
LOS ANGELES	LOCAL HIGHWAY	LAF7520	0	EL MONTE REGIONAL BICYCLE COMMUTER ACCESS IMPROVEMENTS: (1) INSTALLS A 200-FOOT BICYCLE/PEDESTRIAN BRIDGE ACROSS THE RIO HONDO RIVER APPROXIMATELY 300 FEET SOUTHWEST OF THE SAN BERNARDINO (I-10) FREEWAY (2) INSTALLS 0.74 MILE CLASS 2 BIKE LANES ON TYLER AV AND MERCED AV. (3) INSTALLS 1.46 MILE CLASS 3 BIKE ROUTES ON RAMONA BL, VALLEY BL, TOWN/NEWAY DR, AND BROCKWAY ST. (3) IMPLEMENTS WAYFINDING/ SIGNAGE, BRIDGE LIGHTING, BRIDGE ACCESS POINTS, AND THE RIO HONDO BIKE PATH UNDER I-10.	\$1,416
LOS ANGELES	LOCAL HIGHWAY	LA06321	0	PARK PLACE EXTENSION AND RAIL ROAD GRADE SEPARATION PROJECT STUDY. (GRADE SEPARATION IS NON-CAPACITY). COMPLETION OF PARK PLACE EXTENSION BETWEEN ALASKA AVENUE AND SEPULVEDA BOULEVARD IN THE CITY OF EL SEGUNDO. PARK PLACE FOUR LANE ROADWAY EXTENSION BETWEEN NASH AND ALLIED WAY.	\$1,250
LOS ANGELES	LOCAL HIGHWAY	LA06712	0	VERMONT AVE. ARTERIAL IMPROVEMENTS FROM ROSECRANS AVE. TO 182ND STREET. INCLUDES ADDITION OF TURN POCKETS WHERE GEOMETRICALLY POSSIBLE, CHANNELIZATION, TRAFFIC SIGNAL IMPROVEMENTS, PAVEMENT UPGRADES AND SOME CONCRETE WORK.	\$2,350

TABLE 1 FTIP Projects - Continued

County	System	FTIP ID	Route #	Description	Project Cost (\$1,000's)
LOS ANGELES	LOCAL HIGHWAY	LA06713	0	ROSECRANS AVE. ARTERIAL IMPROVEMENTS FROM VERMONT AVE. TO GRENSHAW BLVD. INCLUDES RAISED LANDSCAPED MEDIAN ISLANDS, TRAFFIC SIGNAL UPGRADES, PAVEMENT UPGRADES, AND TRAFFIC CHANNELIZATION.	\$5,140
LOS ANGELES	LOCAL HIGHWAY	LA061011	0	SR-2/HOLLEY DRIVE INTERCHANGE SIGNALIZATION.	\$600
LOS ANGELES	LOCAL HIGHWAY	LA061031	0	PACIFIC AVE. IMPROVEMENTS: THE PROJECT IS A ROADWAY IMPROVEMENT, TRAFFIC SIGNAL MODIFICATION, AND FIBER OPTIC COMMUNICATION INSTALLATION. THE PROJECT IS LOCATED ON PACIFIC AVENUE, A MAJOR ARTERIAL, WITHIN LESS THAN A MILE OF FREEWAY (SR 134).	\$3,400
LOS ANGELES	LOCAL HIGHWAY	LA061032	0	THE PROJECT IS A ROADWAY IMPROVEMENT AND TRAFFIC SIGNAL INSTALLATION PROJECT. THE PROJECT IS LOCATED ON DORAN STREET BETWEEN BRAND BOULEVARD AND ADAMS STREET. PROJECT LOCATION IS WITHIN A MILE OF A FREEWAY CORRIDOR AS DEFINED BY METRO'S HIGHWAY OPERATION DEFINITION.	\$1,300
LOS ANGELES	LOCAL HIGHWAY	LA061033	0	ARDEN AVE. IMPROVEMENTS: THIS PROJECT IS A ROADWAY IMPROVEMENT AND INSTALLATION OF A NEW TRAFFIC SIGNAL LOCATED WITHIN ONE MILE OF A FREEWAY CORRIDOR AS DEFINED BY METRO'S HIGHWAY OPERATION DEFINITION.	\$910
LOS ANGELES	LOCAL HIGHWAY	LA061034	0	VERDUGO ROAD IMPROVEMENT PROJECT: THE PROJECT IS A ROADWAY IMPROVEMENT AND TRAFFIC SIGNAL MODIFICATION PROJECT AND IS LOCATED ON VERDUGO ROAD BETWEEN COLORADO STREET AND CITY OF LOS ANGELES BOUNDARY, A MAJOR ARTERIAL, WITHIN LESS THAN A MILE OF FREEWAY (SR 2) CORRIDOR AS DEFINED BY METRO'S HIGHWAY OPERATIONAL DEFINITION.	\$600
LOS ANGELES	LOCAL HIGHWAY	LA061035	0	VERDUGO BOULEVARD REHABILITATION PROJECT: THE PROJECT IS A ROADWAY IMPROVEMENT AND TRAFFIC SIGNAL MODIFICATION PROJECT AND IS LOCATED ON VERDUGO BOULEVARD BETWEEN VERDUGO ROAD AND CITY OF LA CANADA FLINTRIDGE BOUNDARY, A MAJOR ARTERIAL, WITHIN LESS THAN A MILE OF FREEWAY (SR 2) CORRIDOR AS DEFINED BY METRO'S HIGHWAY OPERATIONAL DEFINITION.	\$1,100
LOS ANGELES	LOCAL HIGHWAY	LA061036	0	NORTH BRAND BOULEVARD REHABILITATION PROJECT: THE PROJECT IS A ROADWAY IMPROVEMENT, TRAFFIC SIGNAL, STREET LIGHT AND ORNAMENTAL LIGHT MODIFICATION PROJECT AND IS LOCATED ON BRAND BOULEVARD BETWEEN FREEWAY 134 AND GLENOAKS BOULEVARD, A MAJOR ARTERIAL.	\$1,000
LOS ANGELES	LOCAL HIGHWAY	LA061037	0	COLORADO STREET REHABILITATION PROJECT: THE PROJECT IS A ROADWAY IMPROVEMENT AND TRAFFIC SIGNAL MODIFICATION PROJECT AND IS LOCATED ON COLORADO STREET BETWEEN KENILWORTH AVENUE AND CENTRAL AVENUE.	\$1,000
LOS ANGELES	LOCAL HIGHWAY	LA061132	0	THE CITYWIDE PEDESTRIAN PLAN: TO ESTABLISH A PLAN IMPROVING PEDESTRIAN SAFETY THROUGH A MULTIFACETED APPROACH.	\$500
LOS ANGELES	LOCAL HIGHWAY	LA061148	0	SIGNAL INSTALLATION AT VARIOUS LOCATIONS - PACIFIC AVE. TRAFFIC SIGNAL MODIFICATIONS. SIGNAL SYNCH FOR SIX (6) NON-CONSECUTIVE INTERSECTIONS ALONG PACIFIC AVENUE.	\$1,500
LOS ANGELES	LOCAL HIGHWAY	LA061208	0	TRAFFIC SIGNAL SYNCHRONIZATION - ALONG PARALLEL ARTERIALS: I-5 NORTH CORRIDOR: THIS PROJECT PROVIDES FOR AN UPGRADE TO THE TRAFFIC SIGNAL COMMUNICATION FACILITIES TO IMPROVE SIGNAL COORDINATION ALONG REGIONAL ARTERIALS IN THE VICINITY OF THE I-5 NORTH CONSTRUCTION CORRIDOR.	\$350
LOS ANGELES	LOCAL HIGHWAY	LA06202	0	TRAFFIC LIGHT SYNCHRONIZATION ALONG THREE MAJOR ARTERIAL, GLENDALE AVE, BRAND BLVD, SAN FERNANDO RD, AND COLORADO ST.	\$4,500
LOS ANGELES	LOCAL HIGHWAY	LA06401	0	SONORA AVE. AT GRADE CROSSING SAFETY IMPROVEMENTS, SONORA AND AIR WAY. NO LANE ADDITION.	\$2,797
LOS ANGELES	LOCAL HIGHWAY	LA06406	0	FAIRMONT AVE. PARK-N-RIDE FACILITY (83 PARKING SPACES) TO SERVE COMMUTERS USING SR-134, I-5. THE LOCATION OF THE PARK-N-RIDE IS FAIRMONT AVENUE AND SAN FERNANDO RD. ON THE SOUTH SIDE OF FAIRMONT AVENUE BETWEEN SAN FERNANDO ROAD AND SR-134 WESTBOUND FREEWAY RAMP. THE WORK INCLUDES EARTHWORK, DRAINAGE, AND PLACEMENT OF AC, LIGHTING, LANDSCAPING, FENCING, AND SIGNAGE WORK. THE WORK ALSO INCLUDES INSTALLING A SIDEWALK FOR PEDESTRIAN ACCESS FROM SAN FERNANDO ROAD.	\$2,000
LOS ANGELES	LOCAL HIGHWAY	LA06808	0	THE STUDY IS FOR THE GLENDALE NARROWS RIVERWALK BRIDGE OVER THE LOS ANGELES RIVER WILL PROVIDE A CONNECTION TO GRIFFITH PARK FROM THE COMMUNITIES NORTH AND EAST OF THE PARK THAT ARE NOW SEPARATED FROM THE PARK BY THE LOS ANGELES RIVER CHANNEL AND THE TWO FREEWAYS THAT CONVERGE ALONG THE SIDE OF THE CHANNEL ADJACENT TO GRIFFITH PARK.	\$600
LOS ANGELES	LOCAL HIGHWAY	LA06809	0	CONSTRUCTION OF CITYWIDE BIKEWAY FACILITY. THIS PROJECT INCLUDES CONSTRUCTION OF CLASS II AND SHARROWS RECOMMENDED IN THE GLENDALE BICYCLE MASTER PLAN AND INSTALLATION OF CITYWIDE BIKE RACKS, AND OTHER AMENITIES RELATED TO BICYCLE. THE PROJECT LENGTH MAY INCLUDE OVER 12 MILES OF BIKE LANES.	\$650
LOS ANGELES	LOCAL HIGHWAY	LA06811	0	STATE ROUTE 134 / GLENDALE AVENUE INTERCHANGE MODIFICATION. THIS PROJECT INCLUDES UPGRADING THE TRAFFIC SIGNAL AT THE SR-134 EASTBOUND ON AND OFF RAMP'S AND GLENDALE AVENUE. UPGRADING THE TRAFFIC SIGNAL AT GLENDALE AVENUE AND MONTEREY ROAD, REALIGNMENT OF CORONADO AND MONTEREY RD. AND GLENDALE AVE., REALIGNMENT OF MEDIANS ON MONTEREY RD, REALIGNMENT OF CURB AND GUTTER ON THE EAST SIDE OF GLENDALE AVE.	\$1,400

TABLE 1 FTIP Projects - Continued

County	System	FTIP ID	Route #	Description	Project Cost (\$1,000's)
LOS ANGELES	LOCAL HIGHWAY	LA06812	0	LENDALE NARROWS BIKEWAY CULVERT BRIDGE. THIS PROJECT CONSIST OF CONSTRUCTION OF A SMALL BRIDGE OVER A CULVERT TO CONNECT LENDALE NARROWS TO FLOWER STREET TO CREATE A CLASS BIKE LANES ALONG LOS ANGELES RIVER. PROJECT LENGTH IS UNDER A MILE.	\$475
LOS ANGELES	LOCAL HIGHWAY	LA06840	0	FRONTAGE RD SO OF SR134 BETWEEN BRAND AND GENEVA ST-- PROJECT STUDY TO EVALUATE THE FEASIBILITY OF A FRONTAGE ROAD TO CONNECT SR134 EAST BOND OFF-RAMPS AT BRAND TO MARYLAND AVE.	\$200
LOS ANGELES	LOCAL HIGHWAY	LA06084	0	ADAMS STREET REHABILITATION PROJECT. NONE CAPACITY TYPE PROJECT.	\$372
LOS ANGELES	LOCAL HIGHWAY	LA F3714	0	ARROYO VERDUGO COMMUTE MANAGER SYSTEM. DEVELOPMENT OF A CUSTOMIZED TDM-SPECIFIC GEOGRAPHICALLY BASED WEBSITE.	\$670
LOS ANGELES	LOCAL HIGHWAY	LA F3715	0	ADVANCED WAYFINDING AND GUIDANCE SYSTEM. INSTALLATION OF PERMANENT CHANGEABLE MESSAGE SIGNS (LARGE) AND 20 STREET CHANGEABLE MESSAGE SIGNS (SMALL) THAT WILL PROVIDE REAL-TIME DYNAMIC DIRECTIONS TO AVAILABLE PARKING.	\$694
LOS ANGELES	LOCAL HIGHWAY	LA F5307	0	LENDALE SUB-REGIONAL TRAFFIC MANAGEMENT CENTER. PROJECT WILL CONNECT TO THE TRAFFIC SIGNAL NETWORK CITYWIDE AND WILL DESIGN AND IMPLEMENT A SUBREGIONAL TRAFFIC MANAGEMENT CENTER (TMC). SYSTEM WILL BE INTEGRATED WITH METRO'S REGIONAL INTEGRATION OF ITS (RIITS) AND THE COUNTY INFORMATION EXCHANGE NETWORK (IEN) SYSTEMS.	\$696
LOS ANGELES	LOCAL HIGHWAY	LA F7321	0	LENDALE REGIONAL ARTERIAL TRAFFIC PERFORMANCE MEASUREMENT SYSTEM : IMPLEMENTS ARTERIAL PERFORMANCE MEASUREMENT SYSTEM IN THE LENDALE TRAFFIC MANAGEMENT CENTER (GTMC) TO EXTRACT INFO FROM REAL-TIME INTELLIGENT TRANSPORTATION SYSTEMS (ITS). SYSTEM WILL PROVIDE REAL-TIME CORRIDOR CONDITIONS AND PERFORMANCE MEASURES TO LOS ANGELES COUNTY INFORMATION EXCHANGE NETWORK (IEN).	\$773
LOS ANGELES	LOCAL HIGHWAY	LA F7600	0	ALHAMBRA PEDESTRIAN IMPROVEMENT/WALKING VIABILITY PROJECT ON VALLEY: (1) INSTALLS ADA CURB RAMPS. (2) INSTALLS BUS STOP IMPROVEMENTS, INCLUDING PEDESTRIAN BENCHES, COVERED SHELTERS, TRASH CANS, WAYFINDING/SIGNAGE, CROSSWALK ENHANCEMENTS, PEDESTRIAN HYBRID BEACONS, PEDESTRIAN LIGHTING, PEDESTRIAN COUNTDOWN SIGNALS, AND REMOVING OBSTRUCTIONS FROM WALKWAYS.	\$1028
LOS ANGELES	LOCAL HIGHWAY	LA F1197	0	HUNTINGTON DR CAPACITY IMPROVEMENTS. MITIGATION COSTS EXCLUDED [PROJECT INVOLVES TRAFFIC FLOW AND CAPACITY IMPRMENTS INCL THE ADDITION OF A THROUGH LANE, TURN LANES & RECONSTRUCTION OF MEDIAN & CHANNELIZING ISLANDS]	\$2,925
LOS ANGELES	LOCAL HIGHWAY	LA F3607	0	ARCADIA GOLD LINE STATION PEDESTRIAN LINKAGE PROJECT. DESIGN AND CONSTRUCTION OF PEDESTRIAN IMPROVEMENTS AROUND THE PLANNED GOLD LINE ARCADIA STATION, CONNECTING THE COMMUNITIES WITH THE REGIONAL RAIL SYSTEM.	\$2,379
LOS ANGELES	LOCAL HIGHWAY	LA E1285	0	REHABILITATE PAVEMENT ON AZUSA AVENUE IN AZUSA. PROJECT LIMITS ARE FROM FIFTH ST. TO SANTA FE AVE..	\$360
LOS ANGELES	LOCAL HIGHWAY	LA F5309	0	CITY OF AZUSA TRAFFIC MANAGEMENT SYSTEM. THIS PROJECT WILL UPGRADE TRAFFIC SIGNALS AT 43 INTERSECTIONS IN THE CITY OF AZUSA. THE PROJECT WILL FUND THE DESIGN AND CONSTRUCTION/IMPLEMENTATION OF CONTROLLERS, WIRING, DETECTION, CONDUIT, FIBER OPTIC, COUNTDOWN PEDESTRIAN HEADS, SIGNALS, VIDEO DETECTION, CCTV CAMERAS AND TRAFFIC CONTROL AND MONITORING UPGRADES AT THE 43 INTERSECTIONS.	\$5,846
LOS ANGELES	LOCAL HIGHWAY	LA 061140	0	COMPLETE STREET IMPROVEMENTS ALONG MAINE AVE. FROM LOS ANGELES ST. TO ARROW HWY. IMPROVEMENTS INVOLVE THE RECONFIGURATION OF THE CORRIDOR BY MEANS OF ROAD DIET. PROJECT COMPONENTS INCLUDE (1) CLASS II BIKEWAYS (2) ROAD DIET FROM 4 TRAVEL LANES TO 2 LANES (3) SHARE LEFT TURN LANES (4) CURB EXTENSION AT 13 INTERSECTIONS (5) SIDEWALK EXTENSION (6) HIGH VISIBILITY CROSSWALKS (7) REPLACING PED SIGNALS AT 5 INTERSECTIONS (8) PED LIGHTING AND (9) ADA IMPROVEMENTS	\$4,152
LOS ANGELES	LOCAL HIGHWAY	LA F3507	0	SOUTH BALDWIN PARK COMMUTER BIKEWAY PROJECT. CONSTRUCT 3-MILE COMMUTER CLASS I BIKE PATH ALONG SAN GABRIEL RIVER AND WALNUT CREEK CONNECTING TO MAJOR EMPLOYMENT CENTERS ON BALDWIN PARK BLVD.	\$820
LOS ANGELES	LOCAL HIGHWAY	LA 06683	0	PCC INTERSECTIONS AT GAGE & WALKER AVE, TRAFFIC SIGNAL MODIFICATION, AND RESURFACING PAVEMENT FROM WILCOX AVE TO CHANSLOR AVE.	\$671
LOS ANGELES	LOCAL HIGHWAY	LA F7634	0	DESIGN WORK TO IMPROVE CONDITIONS FOR PEDESTRIANS IN ORDER TO INCREASE PEDESTRIAN SAFETY, AND TO IMPROVE THE PEDESTRIAN ENVIRONMENT IN ORDER TO PROMOTE WALKING AS A VIABLE FORM OF TRANSPORTATION, AND ENCOURAGE THE USE OF PUBLIC TRANSIT.	\$2,405
LOS ANGELES	LOCAL HIGHWAY	LA 061129	0	CITY WIDE SAFETY ENHANCEMENT PROJECT- CONSTRUCTION OF THE PROJECT WILL INCLUDE INSTALLATION OF PEDESTRIAN COUNTDOWN SIGNAL HEADS, ADA COMPLIANT ACCESS RAMPS, BICYCLE ROUTE SIGNAGE AND SHARED LANE MARKINGS AS WELL AS BICYCLE VIDEO DETECTION AT SIGNALIZED INTERSECTIONS.	\$997
LOS ANGELES	LOCAL HIGHWAY	LA F7120	0	EASTERN AVENUE AND FLORENCE AVENUE RSTI PROJECT : (1) WIDEN FLORENCE AVE AT INTERSECTION OF FLORENCE AVE AND EASTERN AVE TO ACCOMMODATE 2 WESTBOUND LEFT-TURN LANES AND A WESTBOUND DEDICATED RIGHT-TURN LANE. (2) WIDEN SIDEWALKS FROM 5 FT TO 8 FT ON FLORENCE AV AND INCLUDES HIGH VISIBILITY CROSSWALKS, PEDESTRIAN-LEVEL LIGHTING, LANDSCAPING, AND UPGRADED TRAFFIC SIGNAL TIMING.	\$3,385
LOS ANGELES	LOCAL HIGHWAY	LA E0326	0	CREATION OF A RAISED MEDIAN ON ALONDRA BLVD. BETWEEN CLARK AND WOODRUFF TO IMPROVE TRAFFIC SAFETY AND EFFICIENCY. THE MEDIAN WILL PROVIDE LANDSCAPING, LIGHTING AND IRRIGATION	\$385

TABLE 1 FTIP Projects - Continued

County	System	FTIP ID	Route #	Description	Project Cost (\$1,000's)
LOS ANGELES	LOCAL HIGHWAY	LA0655	0	LANDSCAPE AND IRRIGATE EAST BOUND 91 FREEWAY ON AND OFF RAMPS AT BELLFLOWER BL.	\$240
LOS ANGELES	LOCAL HIGHWAY	LA091211	0	THIS PROJECT WOULD PROVIDE TRAFFIC SIGNAL UPGRADES, SIGNAL CONTROLLER UPGRADES, TIMING PLANS, AND TRAFFIC SIGNAL SYSTEM MONITORING TO INTERSECTIONS ON ARTERIAL STREETS WITHIN 1 MILE OF THE INTERSTATE 5 CORRIDOR. SCOPE INCLUDES AUGMENTING BURBANK TMC STAFF FOR MONITORING SIGNAL COORDINATION AND POLICE TRAFFIC CONTROL DURING THE LIFE OF THE CONSTRUCTION PROJECT.	\$735
LOS ANGELES	LOCAL HIGHWAY	LA06625	0	SAN FERNANDO BLVD AT BURBANK BLVD INTERSECTION; FLARE INTERSECTION TO PROVIDE ADDITIONAL TURN LANES, WIDEN SIDEWALKS, ACCOMMODATE FUTURE BICYCLE LANES; RECONSTRUCT CURB AND GUTTER, CONCRETE PAVEMENT AND SIDEWALK; RELOCATE UTILITIES, ACQUIRE RIGHT OF WAY.	\$7,493
LOS ANGELES	LOCAL HIGHWAY	LA06914	0	MEASURE R ARROYO VERDUGO HIGHWAY OPERATIONAL IMPROVEMENTS ALONG (WITHIN 1 MILE) THE I-5 CORRIDOR IN BURBANK. INCLUDES 50 NON-CONTIGUOUS INTERSECTIONS SIGNAL IMPROVEMENTS, INSTALLATION OF FIBER COMMUNICATIONS, DETECTION AND CAMERAS.	\$2,600
LOS ANGELES	LOCAL HIGHWAY	LA06916	0	MEASURE R ARROYO VERDUGO HIGHWAY OPERATIONAL IMPROVEMENTS ALONG SR-134 CORRIDOR, INCLUDES APPROXIMATELY 20+ INTERSECTIONS (NON-CONSECUTIVE) AND INCLUDES CCTV, SIGNAL/TURN-SIGNAL IMPROVEMENTS, FIBER COMMUNICATIONS AND VIDEO DETECTION.	\$2,975
LOS ANGELES	LOCAL HIGHWAY	LA06948	0	INTERSECTION IMPROVEMENT - IMPROVE TRAFFIC SIGNAL OPERATION AND TIMING, REDUCE TRAFFIC CONGESTION AT THE INTERSECTION AND IMPROVE PEDESTRIAN SAFETY THROUGH THE MODIFICATION OF MEDIAN ISLANDS, INSTALLATION OF NEW MEDIAN ISLANDS, THE MODIFICATION OF EXISTING PEDESTRIAN CROSSWALKS AND MODIFICATION OF TRAFFIC SIGNAL PHASING AND TIMING.	\$1,600
LOS ANGELES	LOCAL HIGHWAY	LA0726	0	VANDWEN/EMPIRE/CLYBOURN RAILROAD CROSSING GRADE SEPARATION STUDY PROJECT	\$1,000
LOS ANGELES	LOCAL HIGHWAY	LAF502	0	SAN FERNANDO BIKEWAY, IMPLEMENT A CLASS I BIKEWAY ALONG SAN FERNANDO BLVD, VICTORY PLACE AND BURBANK WESTERN CHANNEL TO COMPLETE THE BURBANK LEG OF A 12 MILE BIKEWAY.	\$8,239
LOS ANGELES	LOCAL HIGHWAY	LAF3313	0	BURBANK-LENDALE TRAFFIC SYSTEM COORDINATION, REPLACE TYPE 170 TRAFFIC SIGNAL CONTROLLERS WITH TYPE 2070 & ASSOCIATED COMMUNICATIONS EQUIPMENT IN BURBANK & LENDALE & INSTALL SYSTEM DETECTION ON GLENDALES BL & SAN FERNANDO BL. CITY OF BURBANK AND CITY OF LENDALE ALONG GLENDALES BOULEVARD BETWEEN BUENA VISTA STREET IN BURBANK AND GENOVA STREET IN LENDALE, AND ALONG SAN FERNANDO BOULEVARD BETWEEN OLIVE AVENUE IN BURBANK AND GLENDALE AVENUE IN LENDALE (SIG SYN - APPROX. 65 SIGNALS).	\$1,274
LOS ANGELES	LOCAL HIGHWAY	LAF3509	0	BURBANK CHANNEL BIKEWAY REGIONAL GAP CLOSURE - DESIGN AND CONSTRUCT A CLASS I BICYCLE AND PEDESTRIAN PATH ALONG THE BURBANK WESTERN FLOOD CONTROL CHANNEL. THE PROJECT INCLUDES BIKEWAY TREATMENTS AT THREE CONTROLLED LOCAL STREET CROSSINGS (1) FLOWER ST/OLIVE AVE, (2) VERDUGO/BIKE PATH, (3) PROVIDENCIA/LAKE ST), AND A GRADE SEPARATED CROSSING AT ALAMEDA AV. THE PROJECT LIMITS ON THE BURBANK WESTERN FLOOD CONTROL CHANNEL ARE FROM OLIVE AVE/FLOWER ST TO ALAMEDA AVE FOR APPROXIMATELY 0.79 MILES.	\$4,384
LOS ANGELES	LOCAL HIGHWAY	LAF5306	0	BURBANK TRAFFIC RESPONSIVE SIGNAL SYSTEM, UPGRADE 20 SIGNALS ON HOLLYWOOD WAY AND 18 ON BUENA VISTA ST. CONNECT 38 SIGNALS TO THE FIBER-OPTIC CABLE-TRUNK LINE AND PURCHASE FIBER-OPTIC MODEMS, INCLUDES A DEMAND-RESPONSIVE TRAFFIC SIGNAL SYSTEM ALONG HOLLYWOOD WAY AND BUENA VISTA ST., LICENSE, SYSTEM INTEGRATION AND TESTING OF THE QUICK TRACK ADAPTIVE CONTROL SOFTWARE.	\$743
LOS ANGELES	LOCAL HIGHWAY	LAF5701	0	BURBANK TRAVELER INFORMATION AND WAYFINDING SYSTEM - THIS STATIC AND DYNAMIC WAYFINDING SIGNAGE PROJECT FOR PROVIDING DRIVERS INFORMATION ABOUT PARKING OPTIONS AND DESTINATIONS IN DOWNTOWN BURBANK AND NEAR BOB HOPE AIRPORT AND PROVIDING TRANSIT USERS ARRIVAL OF THE NEXT BUS. ADDITIONAL SIGNAGE WILL BE INSTALLED AT THE TWO RAIL STATIONS IN BURBANK AND BICYCLE SIGNAGE WILL BE INCLUDED TO HELP IDENTIFY DESTINATION AND TRAVEL DISTANCE FOR THIS MODE.	\$889
LOS ANGELES	LOCAL HIGHWAY	LA06212	0	CONVERT LAS VIRGENES RD. FROM 2 LANE ROAD TO 4 LANE ROAD BETWEEN AGOURA RD. AND LOST HILLS RD.; 2 LANES IN EACH DIRECTION PLUS TURNING POCKETS.	\$7700
LOS ANGELES	LOCAL HIGHWAY	LA06607	0	MULHOLLAND HIGHWAY OPERATIONAL IMPROVEMENT - THE PROJECT WILL CREATE CONSISTENCY BY ESTABLISHING 2 LANES AND A CENTER DIVIDER (CURRENTLY THE ROAD VARIES BETWEEN 2, 3, AND 4 LANES THROUGHOUT THE PROJECT AREA). PROJECT INCLUDES RIGHT TURN POCKETS - 4 FOR A TOTAL OF 560 FEET. THIS PROJECT BENEFITS THE REGION THROUGH IMPROVING TRAFFIC FLOW AND CIRCULATION; THIS CORRIDOR IS PART OF THE LVM COG EMERGENCY MANAGEMENT CORRIDOR AND IS ALSO A NATIONALLY RENOWNED CORRIDOR.	\$7,600
LOS ANGELES	LOCAL HIGHWAY	LAF7516	0	MULHOLLAND HIGHWAY GAP CLOSURE: (1) BIKE/PEDESTRIAN IMPROVEMENTS ON MULHOLLAND HWY AND ON OLD TOPANGA CANYON RD. (2) INSTALLATION OF 0.5 MILE-CLASS 2 BIKE LANES ON MULHOLLAND HWY, NEW SIDEWALKS, RAMPS AND RETAINING WALLS.	\$545
LOS ANGELES	LOCAL HIGHWAY	LA00173	0	BRIDGE NO. 53C0652, SEPULVEDA BLVD, OVER DOMINGUEZ CHANNEL, 1/2 MI E/O ALAMEDA ST. REHABILITATE 4-LANE BRIDGE & WIDEN TO 6-LANE, UPGRADE BRIDGE RAILINGS.	\$6,000

TABLE 1 FTIP Projects - Continued

County	System	FTIP ID	Route #	Description	Project Cost (\$1,000's)
LOS ANGELES	LOCAL HIGHWAY	LA06130	0	ACTIVE TRANSPORTATION PROGRAM - CITY-WIDE BIKE AND PEDESTRIAN IMPROVEMENTS - THE INFRASTRUCTURE COMPONENT INCLUDES A CLASS II BIKE LANE (107 MILE) ON SANTA FE AVE, HIGH VISIBILITY CROSSWALKS, COUNTERDOWN PEDESTRIAN SIGNALS, CURB RAMPS, ETC. THE NON-INFRASTRUCTURE COMPONENT INCLUDES, EDUCATION, ENCOURAGEMENT, AND ENFORCEMENT PROGRAMMING THAT WILL OCCUR OVER A THREE YEAR PERIOD.	\$1,482
LOS ANGELES	LOCAL HIGHWAY	LA06179	0	TRANSFORM MAINTENANCE ROAD TO A NEW 1.3 MILE CLASS II BIKE PED PATH ON DOMINGUEZ CHANNEL. IMPROVEMENTS INCLUDE IMPROVING HORIZONTAL AND VERTICAL GEOMETRY FOR IMPROVED SIGHT DISTANCE, ADDING A GUARDRAIL TO EXISTING BRIDGE, AND IMPROVING THE AVALON BLVD. INTERSECTION SIGNAL	\$1,340
LOS ANGELES	LOCAL HIGHWAY	LAF7322	0	BROADWAY INTERSECTION IMPROVEMENTS TRAFFIC SIGNAL MODIFICATION : MODIFIES FIVE SIGNALIZED INTERSECTIONS ON BROADWAY BETWEEN ALONDRA BLVD AND VICTORIA ST TO INCLUDE LONGER SIGNAL MAST ARMS TO IMPROVE VISIBILITY OF SIGNAL INDICATIONS, IMPROVE LIGHTING, UPGRADE SIGNAL CABINET AND EQUIPMENT, IMPROVE SIGNAL TIMING, AND IMPROVE THE OPERATION OF THE INTERSECTIONS BY ADDING PROTECTIVE/PERMISSIVE LEFT-TURN PHASING AS WARRANTED.	\$814
LOS ANGELES	LOCAL HIGHWAY	LA06349	0	STREET AND DRAINAGE RECONSTRUCTION AT SHEILA STREET AND COMMERCE WAY.	\$600
LOS ANGELES	LOCAL HIGHWAY	LAF5108	0	GARFIELD AVE/WASHINGTON BL MULTIMODAL INTERSECTION IN THE CITY OF COMMERCE. PROJECT WILL IMPROVE INTERSECTION BY ADDING A DEDICATED RIGHT-TURN POCKET ON SOUTHBOUND GARFIELD. ON WASHINGTON BL, ONE RIGHT-TURN POCKET WILL BE ADDED IN THE WESTBOUND DIRECTION. PED FEATURES INCLUDE WIDER NEW 5-FOOT SIDEWALKS ALONG GARFIELD AV AND WASHINGTON BL. THE RELOCATION OF BUS STOPS, HIGH VISIBILITY CROSSWALKS, ADA-COMPLIANT CURB RAMPS, RAILROAD TRACK CROSSINGS, AND PEDESTRIAN-ACTUATED TRAFFIC SIGNALS.	\$978
LOS ANGELES	LOCAL HIGHWAY	LAF7201	0	COMMERCE GOODS MOVEMENT ATLANTIC BOULEVARD: WASHINGTON BOULEVARD TO COMD STREET : (1) IMPLEMENT'S SOUTHBOUND RIGHT-TURN/OVERLAP SIGNAL PHASING FROM ATLANTIC BL ONTO WASHINGTON BL TO IMPROVE MOBILITY FOR TRUCKS AND VEHICLES. (2) STREETSCAPE IMPROVEMENTS, SUCH AS RAISED MEDIANS, CROSSING IMPROVEMENTS, AND SIDEWALK IMPROVEMENTS TO IMPROVE PEDESTRIAN SAFETY AND REDUCE PEDESTRIAN/VEHICLE CONFLICT.	\$1,172
LOS ANGELES	LOCAL HIGHWAY	LA06131	0	WILMINGTON AVE SAFE STREETS PED/BICYCLE IMPROVEMENTS IS A PED/BIKE SAFETY IMPROVEMENT PROJECT FOR THE COMMUNITIES ADJACENT TO THE WILMINGTON AVENUE TRANSPORTATION CORRIDOR BY DEVELOPING SAFER PED CROSSINGS AND INTERSECTIONS AS WELL AS INSTALLING BIKE PATHS TO IMPROVE PED/BIKE SAFETY. TOTAL LENGTH OF CLASS II BIKE WAY IS 10.9 MILE ALONG WILMINGTON AVE BETWEEN EL SEGUNDO BLVD AND ROSECRANS AVE (0.9 MILE) AND ALONG ROSECRANS AVE BETWEEN WILMINGTON AVE AND COMPTON CREEK (0.19 MILE).	\$996
LOS ANGELES	LOCAL HIGHWAY	LA06718	0	INSTALL SAFETY LIGHTS ON COMPTON CREEK.(DEMO ID 205 PUBLIC LAW 03 APP ACT 108-72002)	\$496
LOS ANGELES	LOCAL HIGHWAY	LAE1321	0	COMPTON ARTERIAL RECONSTRUCTION AND IMPROVEMENT PROGRAM (NON-CAPACITY).	\$3,840
LOS ANGELES	LOCAL HIGHWAY	LAE2194	0	GREENLEAF ROW COMMUNITY ENHANCEMENT PROJECT DESIGN AND CONSTRUCTION OF BIKEWAY PED WALK WAY AND UPGRADE SIGNALIZATION	\$3,840
LOS ANGELES	LOCAL HIGHWAY	LAE2819	0	ROSECRANS AVE OVERHEAD AND ARTERIAL RECONSTRUCTION PROJECT(NON-CAPACITY).SAFTEA-LU1321. ISTE A 36.	\$15,000
LOS ANGELES	LOCAL HIGHWAY	LAE3768	0	COMPTON ARTERIAL RECONSTRUCTION AND IMPROVEMENT PROGRAM (NON-CAPACITY).	\$3,000
LOS ANGELES	LOCAL HIGHWAY	LA067326	0	COMPTON CREEK BIKEWAY EXTSN - PHASE II DESIGN & CNSTRUCT 6 MI OF CLAS II BIKE/PED PATH FRM GREENLEAF BL TO ARTESIA FWY WILL INC BIKE PATH, PED WALKWAY SIGNAGE, STRPNG. (PPNO 2869).	\$427
LOS ANGELES	LOCAL HIGHWAY	LAF5501	0	CITY OF COVINA BICYCLE NETWORK-CONSTRUCT CLASS II BIKE LANES ON CITRUS AV (1.8 MI), FRONT ST (0.13 MI), SECOND AV (0.87 MI), BADILLO ST (3.61 MI) AND AZUSA AV (1.53 MILES). THIS PROJECT PROVIDES DIRECT CONNECTIVITY TO A REGIONALLY SIGNIFICANT BIKE-TRANSIT HUB (COVINA METROLINK STATION) IDENTIFIED IN METRO'S 2006 BICYCLE TRANSPORTATION STRATEGIC PLAN. THE PROJECT WILL ALSO PROVIDE SECURE BIKE PARKING AT A LOCATION DETERMINED TO HAVE SIGNIFICANT NEED FOR BICYCLISTS.	\$1048
LOS ANGELES	LOCAL HIGHWAY	LA06451	0	BRIDGE NO. 53C0876, HIGUERA ST, OVER BALLONA CR. BETWEEN EASTHAM DRIVE AND JEFFERSON BLVD. REPLACE 3 LANE BRIDGE WITH A NEW 4 LANE BRIDGE....	\$8,091
LOS ANGELES	LOCAL HIGHWAY	LAE3069	0	SEPUVEDA BOULEVARD WIDENING PROJECT TO ADD A THIRD SOUTHBOUND LANE ON SEPUVEDA BOULEVARD WITHIN THE EXISTING RIGHT OF WAY BETWEEN JEFFERSON BL/PLAYA STREET TO GREEN VALLEY CIRCLE SEPUVEDA BL FROM SAWTELL AVE TO JEFFERSON/PLAYA ST WILL BE RE-STRIPED.	\$8,132
LOS ANGELES	LOCAL HIGHWAY	LAF659	0	PEDESTRIAN IMPROVEMENTS FOR INTERSECTIONS WITH BUS STOPS. THIS PROJECT CONSISTS OF SAFETY AND AESTHETIC-RELATED PEDESTRIAN IMPROVEMENTS AT INTERSECTIONS ALONG MAJOR ARTERIALS WITH HIGH TRANSIT AND PEDESTRIAN ACTIVITIES WITHIN THE CITY OF CULVER CITY.	\$1066
LOS ANGELES	LOCAL HIGHWAY	LAF177	0	REAL-TIME MOTORIST PARKING INFORMATION SYSTEM DEMONSTRATION. THIS PROJECT WILL PROVIDE A REAL-TIME INFORMATION SYSTEM TO COMMUNICATE AND GUIDE MOTORISTS TO AVAILABLE PARKING SPACES IN SELECTED PARKING STRUCTURES IN THE CITY OF CULVER CITY.	\$1,072

TABLE 1 FTIP Projects - Continued

County	System	FTIP ID	Route #	Description	Project Cost (\$1,000's)
LOS ANGELES	LOCAL HIGHWAY	LAF3175	0	CULVER BOULEVARD REALIGNMENT PROJECT, CULVER BL, WIDENING W/ FRONTAGE ROAD NARROWING, SEPARATED BY REBUILT BIKE/PEDESTRIAN, W/ RAISED MEDIAN, TURN LANES, TRAFFIC SIGNAL, COUNTDOWN PED HEADS AND OTHER IMPROVEMENTS. THE PROJECT LIMITS ARE SEPULVEDA BL. TO THE WEST AND ELENDA STREET TO THE EAST, LOCATED ENTIRELY WITHIN THE CITY OF CULVER CITY. ALL OF THE REALIGNMENT WILL BE WITHIN THE EXISTING PUBLIC RIGHT-OF-WAY. SAFTEA-LU 3069 PG 119 STA1: 1375.	\$5,965
LOS ANGELES	LOCAL HIGHWAY	LAF3318	0	TRAFFIC MONITORING AND SURVEILLANCE SYSTEM GAP CLOSURE. DESIGN AND IMPLEMENTATION OF 14 CCTV CAMERA TRAFFIC MONITORING AND SURVEILLANCE SYSTEM, HUB SWITCHING EQUIPMENT AND APPROX. 4 MI OF FIBER OPTIC COMMUNICATION CABLES, AND EOC VIDEO.	\$3,048
LOS ANGELES	LOCAL HIGHWAY	LAP4M001	0	THE CITY-WIDE PEDESTRIAN PLAN WILL IDENTIFY VIABLE BICYCLE AND PEDESTRIAN CORRIDORS, ASSESS INTERSECTIONS WITH HIGH PEDESTRIAN/ BICYCLE ACCIDENT RATES, AND TARGET INFRASTRUCTURE IMPROVEMENTS FOR THOSE INTERSECTIONS/SEGMENTS. THE DOCUMENT WILL COORDINATE ALL EXISTING CITY PEDESTRIAN POLICIES AND RECOMMENDED INFRASTRUCTURE FOR IMPLEMENTATION IN A USER-FRIENDLY MANUAL.	\$500
LOS ANGELES	LOCAL HIGHWAY	LA06737	0	MARINE AVENUE AND AVIATION BOULEVARD INTERSECTION IMPROVEMENT PROJECT INCLUDES STREET WIDENING, PROPOSING TO WIDEN THE NORTH SIDE OF MARINE AVENUE TO ADD THE NEEDED LANE CAPACITY ON MARINE AVENUE AT AVIATION BOULEVARD. THIS PROJECT WILL REQUIRE 23' OF DEDICATION FROM FFA RIGHT-OF-WAY ON THE NORTH SIDE OF MARINE AVENUE TO ACCOMMODATE A SECOND WESTBOUND LEFT-TURN LANE (RESULTING IN DOUBLE LEFT-TURN LANES), A 3RD WESTBOUND THROUGH LANE AND A DEDICATED WESTBOUND RIGHT-TURN POCKET.	\$900
LOS ANGELES	LOCAL HIGHWAY	LAF3109	0	HAWTHORNE BOULEVARD MOBILITY IMPROVEMENT PROJECT. IMPROVE CIRCULATION, INCREASING EFFICIENCY FOR VEHICULAR, PEDESTRIAN, PUBLIC TRANSIT AND BICYCLE MOVEMENT ON HAWTHORNE BLVD. THE PROJECT LIMITS IS FROM EL SEGUNDO BOULEVARD TO THE NORTH AND TO THE SOUTHERN CITY LIMIT AT ROSECRANS AVENUE. FROM I-105/120 STREET TO EL SEGUNDO BOULEVARD.	\$10,830
LOS ANGELES	LOCAL HIGHWAY	LAF5101	0	EL SEGUNDO BOULEVARD IMPROVEMENT PROJECT. THIS PROJECT IS LOCATED IN THE CITY OF HAWTHORNE AND WILL IMPROVE EL SEGUNDO BL AT THE INTERSECTIONS OF HAWTHORNE BL, PRAIRIE AV, DOTY AV, CERISE AV, AND CHADRON AV, A DISTANCE OF 1.3 MILES. THE INTERSECTION OF EL SEGUNDO BL AND PRAIRIE AV WILL BE WIDENED TO ACCOMMODATE A DEDICATED WESTBOUND RIGHT-TURN LANE AND TO RESTRIPE EL SEGUNDO BL TO ACCOMMODATE DUAL LEFT-TURN LANES FOR BOTH THE EASTBOUND AND WESTBOUND DIRECTIONS.	\$4,174
LOS ANGELES	LOCAL HIGHWAY	LAF7101	0	PRAIRIE AVENUE MOBILITY PROJECT : (1) WIDENS PRAIRIE AV INTERSECTIONS AT EL SEGUNDO BL AND AT ROSECRANS AV TO CONSTRUCT DOUBLE LEFT-TURN POCKETS FOR TRAFFIC FLOW IMPROVEMENT AND TO INSTALL CLASS III BIKE ROUTES ON BOTH SIDES. (2) TRAFFIC SIGNAL UPGRADE AND SYNCHRONIZATION OF 8 INTERSECTIONS BETWEEN 118TH AND MARINE. (3) INSTALLS CLASS III BIKE EQUIPMENTS, IMPROVES PEDESTRIAN FACILITIES, AND UPGRADES ADA ACCESS RAMPS, NEW MEDIAN CURBS AND LANDSCAPING AT INTERSECTIONS.	\$5,103
LOS ANGELES	LOCAL HIGHWAY	LA06141	0	STATE ST. COMPLETE STREET PROJECT BETWEEN RANDOLPH ST AND SANTA ANA ST (1.5 MILE) PROPOSES IMPROVEMENTS THAT WILL HELP IMPROVE STATE STREET'S OVERALL OPERATION AND EFFICIENCY WHILE PROMOTING BICYCLING AND WALKING WITHIN HUNTINGTON PARK.	\$1,184
LOS ANGELES	LOCAL HIGHWAY	LAF7312	0	HUNTINGTON PARK SIGNAL SYNCHRONIZATION & BUS SPEED IMPROVEMENT : (1) SYNCHRONIZES SIGNALIZED INTERSECTIONS, RECONFIGURES TRAFFIC LANES TO ALLOW DUAL TURNING LANES, INSTALLS CHANGEABLE MESSAGE SIGNS ALONG PACIFIC BL. (2) SIGNAL IMPROVEMENTS INCLUDING CONTROLLER UPGRADES, NEW MASTS, VIDEO ACTIVATED TRAFFIC CONTROLLERS, AND SYNCHRONIZATION OF SIGNALIZED MID-BLOCK PEDESTRIAN CROSSINGS ON PACIFIC BL.	\$1,186
LOS ANGELES	LOCAL HIGHWAY	LAF7702	0	DOWNTOWN HUNTINGTON PARK I-PARK SYSTEM IMPLEMENTATION : PROVIDES 4 CHANGEABLE MESSAGING PARKING SIGNS, 12 WAY FINDING PARKING SIGNS, 10 BICYCLE RACKS, AND 6 BICYCLE LOCKERS AT THE DOWNTOWN SHARED PARKING DISTRICT ALONG PACIFIC BL. TO IMPROVE BICYCLE ACCESS AND IMPROVE TRAFFIC CIRCULATION.	\$780
LOS ANGELES	LOCAL HIGHWAY	LA00442	0	RETROFITTING THE EXISTING TWO-LANE WIDE PECK ROAD BRIDGE OVER THE SAN GABRIEL RIVER FWY (ROUTE 605) & WIDEN IT TO ACCOMMODATE 4 LANES (2 EACH DIRECTION) TO ELIMINATE BOTTLENECK	\$13,600
LOS ANGELES	LOCAL HIGHWAY	LA00443	0	REHABILITATING THE EXISTING AZUSA AVE. BRIDGE OVER THE UPRR TRACKS AND VALLEY BLVD. APPLY NEW PAINT TO THE EXISTING STEEL BRIDGE TO AVOID FURTHER WEATHER CORROSION. TOLL CREDITS WILL BE USED TO MATCH STPLF FUNDS.	\$2,912
LOS ANGELES	LOCAL HIGHWAY	LAF5100	0	SR57/60 CONFLUENCE. IMPROVE GRAND AVENUE INTERSECTION AT GOLDEN SPRINGS DRIVE: WIDEN GRAND AVE. FROM SR-60 FREEWAY TO LAVENDER DRIVE. A DISTANCE OF 0.2 MILES. PROJECT WILL ADD 1 THRU SB LANE AND 2 THRU NB LANE. WIDEN GOLDEN SPRINGS DRIVE BETWEEN COPLEY DR AND RACQUET CLUB DRIVE. ADD WB LEFT-TURN LANE AND A DEDICATED RIGHT-TURN LANE, WIDEN SIDEWALKS AND ADD PEDESTRIAN COUNTDOWN SIGNALS.	\$16,819
LOS ANGELES	LOCAL HIGHWAY	LA00188	0	ARBOR VITAE STREET FROM LA BREA AVENUE TO PRAIRIE AVENUE - RECONSTRUCTING/UPGRADING PAVEMENT, NEW C&G, SIDEWALKS, DRIVEWAYS, PEDESTRIAN RAMPS, LANDSCAPING AND STREET LIGHTING.	\$3,532

TABLE 1 FTIP Projects - Continued

County	System	FTIP ID	Route #	Description	Project Cost (\$1,000's)
LOS ANGELES	LOCAL HIGHWAY	LA06843	0	MEASURES ITS PHASE IV - PART A OF A TWO PART ITS IMPROVEMENT PROJECT. DESIGN AND CONSTRUCTION OF APPROXIMATELY 2.7 MILES OF COMMUNICATION INFRASTRUCTURE ALONG LA BREA, FLORENCE, GREENSHAW, MANCHESTER AND CENTINELA. SIGNAL SYNCHRONIZATION (APPROX. 20 LOCATIONS); DESIGN AND CONSTRUCTION OF SYSTEM DETECTION (APPROX. 40 INTERSECTIONS); CHANGEABLE MESSAGE SIGNS (2 LOCATIONS); CCTV CAMERAS (APPROX. 6 LOCATIONS) AND TRAFFIC MANAGEMENT CENTER EQUIPMENT AND COMMUNICATION NETWORK INTEGRATION.	\$3,500
LOS ANGELES	LOCAL HIGHWAY	LAE1934A	0	CENTURY BLVD PEDESTRIAN SAFETY AND TRANSPORTATION IMPROVEMENTS ELEMENTS WILL INCLUDE THE ADDITION OF EXCLUSIVE RIGHT AND LEFT TURN LANES, RAISED MEDIANS, TRAFFIC SIGNAL AND STREET LIGHT UPGRADES, CROSSWALK AND SIDEWALK IMPROVEMENTS, PARKWAY LANDSCAPING AND PAVEMENT REHABILITATION.	\$4,428
LOS ANGELES	LOCAL HIGHWAY	LAF3130	0	FLORENCE AVE REGIONAL TRANSPORTATION CORRIDOR IMPRVTM PROJ. RECONFIGURATION OF 1.2 MILE SEGMENT OF FLORENCE AV INCLUDING NEW FLORENCE AV/REONDO BL INTERSECTION & RELATED CAPACITY PED/BIKE IMPRV TO REBALANCE STREET INTO MULTIMODAL CORRIDOR.	\$4,091
LOS ANGELES	LOCAL HIGHWAY	LAF5300	0	CITY OF INGLEWOOD ITS - PHASE IV. 2.7 MILES OF FIBER-OPTICS ON LA CIENEGA BLVD., CENTINELA AVE., FLORENCE AVE. AND PRAIRIE AVE. NEW CCTV, SPEED DETECTION SYSTEMS AND WEB-BASED TRAVELER INFORMATION. UPGRADE THE CURRENT TRAFFIC CONTROL SYSTEM (TCS) TO ADAPTIVE TCS AND REPLACE 5 TYPE 170 CONTROLLERS WITH TYPE 2070 CONTROLLERS ON PRAIRIE AVE. THERE ARE APPROXIMATELY 23 INTERSECTIONS THAT WILL RECEIVE VARIOUS ITS IMPROVEMENTS.	\$1,245
LOS ANGELES	LOCAL HIGHWAY	LAF7319	0	INGLEWOOD ITS - PHASE V. (1) DESIGNS AND CONSTRUCTS COMPUTERIZED TRAFFIC CONTROL AND MONITORING SYSTEMS. (2) EXPANDS CENTRAL TRAFFIC CONTROL AND ADVANCE TRAFFIC MANAGEMENT AT 39 INTERSECTIONS. (3) IMPROVES 6.13 MILES OF FIBER OPTIC COMMUNICATIONS, (4) EXPANDS CLOSED CIRCUIT TELEVISION CAMERAS (CCTV) AT 10 INTERSECTIONS, (5) INSTALLS CHANGEABLE MESSAGE SIGNS (CMS) AT 2 INTERSECTIONS, AND (6) INSTALLS EW COMMUNICATION HUBS AT 3 INTERSECTIONS.	\$1,918
LOS ANGELES	LOCAL HIGHWAY	LAF5522	0	FOOTHILL BLVD. LINK BIKEWAY & PEDESTRIAN GREENBELT PROJECT, BRIGGS AVE. TO ALTA CANYADA RD., CONSTRUCT 1.5 MILES OF CLASS II BIKE LANES, BIKE AND BUS FACILITIES, RAISED MEDIAN AND 0.5 MILES OF PEDESTRIAN BELTWAY WITH LIGHTING AND HARDSCAPE.	\$2,038
LOS ANGELES	LOCAL HIGHWAY	LA06937	0	DE LAMO BOULEVARD AT LAKEWOOD BOULEVARD INTERSECTION IMPROVEMENTS - ADD A SECOND LEFT TURN LANE IN ALL DIRECTIONS, MODIFY EXISTING TRAFFIC SIGNALS, WIDEN BOX CULVERT SOUTH OF DEL AMO BOULEVARD, REMOVE OR MODIFY RAISED MEDIANS ON LAKEWOOD BOULEVARD, WIDEN SOUTHSIDE OF DEL AMO BOULEVARD (NO NEW THRU LANES), AND WIDEN LAKEWOOD BOULEVARD TO ACCOMMODATE A THIRD THRU LANE SOUTHBOUND THROUGH THE INTERSECTION WITHIN THE EXISTING RIGHT OF WAY IN THE CITIES OF LAKEWOOD AND LONG BEACH.	\$2,885
LOS ANGELES	LOCAL HIGHWAY	LA0D447	0	AVENUE L GAP CLOSURE FROM 60TH STREET WEST TO 30TH WEST, ADDING AN ADDITIONAL LANE IN EACH DIRECTION, INCLUDING A MEDIAN (WITHIN CITY JURISDICTION)	\$4,620
LOS ANGELES	LOCAL HIGHWAY	LA0G166	0	WIDENING OF 30TH ST WEST FROM AVENUE M TO AVENUE L (APPROX. 1 MILE) FROM 2 VEHICULAR TRAVEL LANES TO 4 LANES. 8 FOOT CLASS II BIKE LANES WILL BE STRIPPED ON BOTH SIDES OF THE STREET.	\$2,280
LOS ANGELES	LOCAL HIGHWAY	LAF5304	0	TRAFFIC SIGNAL SYSTEM MODERNIZATION. THE PROJECT BOUNDARIES ARE FROM AVE H TO AVENUE AND 70TH ST WEST TO 30TH ST EAST. IT WILL REPLACE 28 MILES OF COPPER CABLE WITH FIBER OPTIC IN EXISTING CONDUIT, INSTALL NEW ETHERNET SWITCHES IN EXISTING CONTROLLER CABINETS, UPDATE EXISTING FIBER BACKBONE EQUIPMENT, INSTALL EQUIPMENT TO VIEW IMAGES REMOTELY THROUGH EXISTING VIDEO DETECTION, AND INSTALL WIRELESS COMMUNICATIONS TO REMOTE SIGNALIZED INTERSECTIONS.	\$2,018
LOS ANGELES	LOCAL HIGHWAY	LAF5803	0	AVENUE I CORRIDOR IMPROVEMENTS. 15TH ST W TO 10TH ST W PROJECT IS LOCATED IN LANCASTER ALONG AVE I BETWEEN 15TH ST W AND 10TH ST W. IT WILL INSTALL STREETSCAPE IMPROVEMENTS TO INCLUDE LANDSCAPING, BIKE PATH, BUFFER, SIDEWALK, BUS STOP IMPROVEMENTS, CENTERLINE MEDIANS, ADDITIONAL PARALLEL PARKING FOR NON-RESIDENTIAL USES, AND ADA ACCESSIBILITY.	\$744
LOS ANGELES	LOCAL HIGHWAY	LA0G1053	0	INGLEWOOD AVENUE WIDENING PHASE III - INGLEWOOD AVENUE ROADWAY WIDENING ON THE WEST SIDE OF THE ROADWAY TO PROVIDE FOR THE ADDITION OF A THIRD SOUTHBOUND LANE BETWEEN ROSEGRANS AVENUE AND MARINE AVENUE AND RAISED MEDIAN ISLANDS WITH SIDEWALK ENHANCEMENTS ADJACENT TO LAWDALE HIGH SCHOOL.	\$3,615
LOS ANGELES	LOCAL HIGHWAY	LA0G954	0	THIS PROJECT WILL IMPROVE OUTDATED AND NON-ACTUATED TRAFFIC SIGNAL SYSTEMS WITHIN LAWDALE AND WILL INCLUDE: FULL ACTUATION, INADEQUATE BICYCLE & PEDESTRIAN ACCOMMODATION, LIMITED TIMING PLANS, NEW CONTROLLERS/CABINETS WHERE NEEDED, AND NEW WIRING/LOOPS WHERE NEEDED AT ALL INTERSECTIONS.	\$1,500
LOS ANGELES	LOCAL HIGHWAY	LAE2906	0	INGLEWOOD AVENUE WIDENING PHASE II - INGLEWOOD WIDENING BETWEEN MANHATTAN BEACH BLVD AND WEST 156TH STREET THE ROADWAY WIDENING ALONG EAST SIDE OF INGLEWOOD AVENUE TO ACCOMMODATE A DEDICATED THIRD LANE IN THE NORTH BOUND DIRECTION (PHASE I); AND INGLEWOOD AVENUE AT MARINE AVENUE FOR ROADWAY WIDENING TO ACCOMMODATE THREE DEDICATED RIGHT TURN LANE POCKETS, AS WELL AS MODIFICATION TO THE SIGNAL SYSTEM TO IMPROVE TRAFFIC OPERATIONS AT THIS INTERSECTION (PHASE II).	\$4,515

TABLE 1 FTIP Projects - Continued

County	System	FTIP ID	Route #	Description	Project Cost (\$1,000's)
LOS ANGELES	LOCAL HIGHWAY	LAF7500	0	HAWTHORNE BOULEVARD CLASS II BICYCLE LANES: (I) INSTALLS 1.0 MILE OF CLASS 2 BIKE LANES ON HAWTHORNE BLVD FOR BOTH DIRECTIONS. (2) PROVIDES BICYCLE PARKING.	\$234
LOS ANGELES	LOCAL HIGHWAY	LA06972	0	IN LOMITA, PACIFIC COAST HIGHWAY AT WALNUT ST & WESTERN AVE AT PALOS VERDES DRIVE NORTH, IMPROVE MULTIPHASE SIGNAL OPERATIONS, OPTIMIZE CYCLES, EMPLOY PROTECTED, PERMISSIVE LEFT-TURN PHASES, RESTRICT AND CONTROL TURNING WITH STRIPING ON WALNUT. EMPLOY EMERGENCY VEHICLE PREEMPTION, CROSSWALK MARKINGS, AUDIBLE PED SIGNAL AND COUNTDOWN DEVICES. ADA MEDIAN IMPROVEMENT, SIGNAL UPGRADES, BICYCLE DETECTION, SIGNAL HEAD, LENS & VISOR UPGRADES.	\$900
LOS ANGELES	LOCAL HIGHWAY	LA068094	0	PIER B INTERMODAL RAIL YARD EXPANSION: PROJECT WILL EXPAND PIER B INTERMODAL RAIL YARD TO FACILITATE ADDITIONAL RAIL SHIPMENTS.	\$250,000
LOS ANGELES	LOCAL HIGHWAY	LA068129	0	PORTS OF LONG BEACH AND LOS ANGELES ATMS/ATIS PROJECT TO IMPROVE TRAFFIC OPERATIONS ON THE: I-710, I-110, SR47103.	\$1,410
LOS ANGELES	LOCAL HIGHWAY	LA06088	0	GRADE SEPARATION FOR REEVES CROSSING AT TERMINAL ISLAND WOULD ELIMINATE TRAFFIC CONFLICTS AND ALLOW EFFICIENT MOVEMENT OF TRAINS IN TERMINAL ISLAND WITHOUT CONCERN FOR IMPACTS TO VEHICULAR TRAFFIC.	\$10,580
LOS ANGELES	LOCAL HIGHWAY	LA06169	0	PIER F SUPPORT YARD: THIS PROJECT PROVIDES STORAGE TRACKS ON THE PIER F ROAD CUL-DE-SAC, WHICH ARE USEFUL FOR SUPPORT FUNCTIONS SUCH AS SET OUT OF BAD ORDER RAIL CARS AND POSSIBLY ENGINE TIE-UP.	\$37,380
LOS ANGELES	LOCAL HIGHWAY	LA06170	0	TRACK REALIGNMENT AT OCEAN BOULEVARD: THIS PROJECT WILL CREATE IMPROVED LEAD TRACKS TO THE METROPOLITAN STEVEDORING CO. (METRO) RAIL YARD AND TO PIER F ON-DOCK RAIL YARD.	\$77,435
LOS ANGELES	LOCAL HIGHWAY	LA06171	0	NAVY MOLE STORAGE YARD: THE PROPOSED PROJECT INCLUDES THREE NEW TRACKS ALONG THE WEST SIDE OF PIER T. THIS PROJECT WILL ALSO INVOLVE RELOCATING THE EXISTING UTILITIES.	\$12,850
LOS ANGELES	LOCAL HIGHWAY	LA06172	0	TI WYE TRACK REALIGNMENT: THIS PROJECT WILL PROVIDE FOR DOUBLE TRACKING THE SOUTH LEG OF THE WYE TO ACCOMMODATE SIMULTANEOUS TRAIN SWITCHING MOVES FROM THESE VARIOUS ACTIVITIES ON TERMINAL ISLAND.	\$12,260
LOS ANGELES	LOCAL HIGHWAY	LA06173	0	RECONFIGURATION OF CONTROL POINT (CP) MOLE - THE NEW CONTROL POINT AT THE MOLE WILL ENABLE INCREASED TRAIN SPEEDS AND REDUCED TRAIN DELAYS CAUSED BY MANUAL SWITCH OPERATIONS.	\$20,240
LOS ANGELES	LOCAL HIGHWAY	LA06993	0	ATLANTIC AVENUE AND WILLOW STREET INTERSECTION IMPROVEMENTS: ADDITION OF LEFT AND RIGHT TURN LANES FOR THE NORTHBOUND AND SOUTHBOUND APPROACH.	\$300
LOS ANGELES	LOCAL HIGHWAY	LA06701	0	DEVELOP AND IMPLEMENT TRAFFIC CALMING MEASURES FOR TRAFFIC EXITING THE I-710 INTO LONG BEACH	\$1920
LOS ANGELES	LOCAL HIGHWAY	LAE1296	0	LONG BEACH INTELLIGENT TRANSPORTATION SYSTEM	\$2,880
LOS ANGELES	LOCAL HIGHWAY	LAE3793	0	CALIFORNIA AVE WIDENING: FROM WILLOW AVE AND SPRING ST WIDEN CALIFORNIA AVE TO SECONDARY MODIFIED HIGHWAY STREET STANDARDS (NON-CAPACITY).	\$1,200
LOS ANGELES	LOCAL HIGHWAY	LAF1341	0	OCEAN BL. SIGNAL SYNCHRONIZATION AND ENHANCEMENT PROJECT. INSTALLATION OF NEW SIGNALS, INTERCONNECT, PEDESTRIAN SAFETY ENHANCEMENTS, ADA ACCESS RAMPS, TRANSIT INFORMATION SYSTEMS, AND TRAFFIC SIGNAL UPGRADES AND RECONSTRUCTION. OCEAN BL, ALAMITOS TO LIVINGSTON	\$2,392
LOS ANGELES	LOCAL HIGHWAY	LAF1528	0	SAN GABRIEL RIVER BIKE PATH GAP CLOSURE AT WILLOW STREET. CREATION OF OFF-STREET BICYCLE PATH TO ACHIEVE BICYCLE ROUTE GAP CLOSURE ON WILLOW STREET FROM THE SAN GABRIEL RIVER BIKE PATH WEST TO STUDEBAKER ROAD. BIKE PATH DISTANCE: .5 MILES.	\$978
LOS ANGELES	LOCAL HIGHWAY	LAF1530	0	BICYCLE SYSTEM GAP CLOSURES & IMPROVED LA RIVER BIKE PATH. PROJECT WILL CONSTRUCT PRIORITY CLASS I & III BICYCLE SYSTEM GAP CLOSURES IN LONG BEACH AND IMPROVE CONNECTION TO LA RIVER. CLASS II BIKE LANES 4.8 MILES. CLASS III 3 MILES.	\$1,231
LOS ANGELES	LOCAL HIGHWAY	LAF1636	0	CITY OF LONG BEACH ATHERTON STREET ENHANCEMENT PROJECT. REHABILITATING THE LANDSCAPED MEDIAN TO ENHANCE THE EXPERIENCE OF OVER 37,000 PEDESTRIANS, BICYCLISTS, TRANSIT USERS AND AUTOS DAILY.	\$1,322
LOS ANGELES	LOCAL HIGHWAY	LAF3615	0	LONG BEACH BLVD. PEDESTRIAN IMPROVEMENT PROJECT. PROJECT PROVIDES PEDESTRIAN-ORIENTED IMPROVEMENTS TO LONG BEACH BOULEVARD INCLUDING PEDESTRIAN LIGHTING, STREET TREES, AND CROSSWALK TREATMENTS.	\$2,521
LOS ANGELES	LOCAL HIGHWAY	LAF5503	0	CITY OF LONG BEACH PHASE II BIKE SHARE PROGRAM. THIS PROJECT IS LOCATED IN THE CITY OF LONG BEACH AND WILL IMPLEMENT A PHASE II BIKE-SHARE PROGRAM. FUNDS ARE REQUESTED FOR THE PURCHASE AND INSTALLATION OF 500 BIKES, 50 DOCKING STATIONS AND KIOSKS, AND WAYFINDING/ SIGNAGE. THE PROJECT WILL SUPPORT LOCAL AND METRO TRANSIT STATIONS, EMPLOYMENT AREAS, BUSINESS DISTRICTS, AND MAJOR ACTIVITY NODES.	\$2,828

TABLE 1 FTIP Projects - Continued

County	System	FTIP ID	Route #	Description	Project Cost (\$1,000's)
LOS ANGELES	LOCAL HIGHWAY	LAF5609	0	DOWNTOWN LONG BEACH PINE AVENUE STREETScape IMPROVEMENT. THIS PROJECT IS LOCATED ON PINE AVE BETWEEN SEASIDE WY AND ANAHEIM ST. IT WILL IMPLEMENT STREET IMPROVEMENTS, SUSTAINABLE DESIGN FEATURES, AND PEDESTRIAN ENHANCEMENTS ALONG A MAJOR TRANSIT NODE INCLUDING: PEDESTRIAN LIGHTING, CROSSWALK ENHANCEMENTS, DIAGONAL CROSSWALKS, STREET FURNITURE, BIKE RACKS, STREET TREES, LANDSCAPING, BOLLARDS TO FACILITATE STREET CLOSURE FOR COMMUNITY EVENTS AND REMOVAL OF OBSTRUCTIONS FROM THE WALKWAY.	\$4,271
LOS ANGELES	LOCAL HIGHWAY	LAF5808	0	ATLANTIC AVENUE STREETScape ENHANCEMENTS. THIS PROJECT IS LOCATED IN LONG BEACH ALONG ATLANTIC AVENUE BETWEEN MARKET ST AND SOUTH ST. IT WILL INSTALL STREETScape IMPROVEMENTS, SHADE TREES, PEDESTRIAN LIGHTING AND DECORATIVE PAVEMENT FEATURES. FUNDS ARE REQUESTED FOR DESIGN, CONSTRUCTION AND INSTALLATION COSTS. THE ORIGINAL SCOPE OF THIS PROJECT WAS REDUCED BY ELIMINATING THE SECTION BETWEEN SOUTH ST AND ARTESIA BL.	\$643
LOS ANGELES	LOCAL HIGHWAY	LAF7117	0	REDONDO AVENUE AND ANAHEIM STREET INTERSECTION IMPROVEMENTS: (1) WIDENS REDONDO AVENUE AND ANAHEIM STREET INTERSECTION AND RELOCATE BUS STOPS AND UTILITIES TO LENGTHEN LEFT-TURN POCKETS IN WESTBOUND AND EASTBOUND DIRECTIONS ON ANAHEIM ST. (2) ADDS EXCLUSIVE RIGHT-TURN LANE ON SOUTHBOUND APPROACH ON REDONDO AV. (3) INSTALLS BUS STOP ENHANCEMENTS, BIKE-SENSITIVE LOOP DETECTORS, AND BIKE RAMP AT INTERSECTION CORNERS.	\$1,236
LOS ANGELES	LOCAL HIGHWAY	LAF7204	0	PIER B STREET FREIGHT CORRIDOR RECONSTRUCTION: (1) REALIGNS PIER B ST BETWEEN PICO AV AND PIER A WY AND WIDENS INTO 2 LANES IN EACH DIRECTION TO IMPROVE GOODS MOVEMENT MOBILITY AND ENHANCE PEDESTRIAN TRAVEL. (2) CONSTRUCTS NEW SIDEWALK ON THE SOUTH SIDE OF PIER B ST. (3) CONSTRUCTS J-HOOK FLYOVER TO CONNECT PIER B ST WITH ANAHEIM ST.	\$105,791
LOS ANGELES	LOCAL HIGHWAY	LAF7314	0	SANTA FE AVENUE SYNCHRONIZATION ENHANCEMENT PROJECT: (1) UPGRADES TRAFFIC SIGNALS ALONG THE SANTA FE AV CORRIDOR AND REPLACES OBSOLETE EQUIPMENTS. (2) REPLACES EXISTING SIGNAL CONTROLLERS WITH ADVANCED TRAFFIC CONTROLLERS TO CONNECT WITH THE ADAPTIVE TRAFFIC CONTROL SYSTEM (ATCS). (3) INSTALLS CCTVS AND CLASS III BIKE ROUTE ALONG SANTA FE AV. (4) FURNISHES PEDESTRIAN PUSH BUTTONS AND LED COUNTDOWN PEDESTRIAN HEADS.	\$3,200
LOS ANGELES	LOCAL HIGHWAY	LAF7316	0	ARTESIA CORRIDOR ATCS ENHANCEMENT PROJECT: (1) UPGRADES TRAFFIC SIGNALS ALONG ARTESIA BL BETWEEN LONG BEACH BL AND DOWNEY AV TO CONNECT WITH ADAPTIVE TRAFFIC CONTROL SYSTEM (ATCS). (2) INSTALLS CCTV AND CMS ON ARTESIA BL. (3) INSTALLS FIBER OPTIC CABLE AND DEVICES TO CONNECT SIGNALS TO EACH OTHER AND TRAFFIC MANAGEMENT CENTER (TMC). (4) TWO NEW TRAFFIC SIGNALS IN COMPTON (5) INSTALLS CLASS II BIKE LANE IN BOTH DIRECTIONS FROM ATLANTIC AV TO SUSANA RD. (6) PEDESTRIAN IMPROVEMENTS.	\$3,045
LOS ANGELES	LOCAL HIGHWAY	LA0C8120	0	SOUTH BAY FORUM TRAFFIC SIGNAL CORRIDORS PROJECT. DESIGN & CONSTRUCTION OF MULTI JURISDICTIONAL, SIGNAL SYSTEM IMPROVEMENTS ON REGIONAL ARTERIALS & ADVANCED ITS TECHNOLOGY. (APPROX. 770 INTERSECTIONS)	\$9,627
LOS ANGELES	LOCAL HIGHWAY	LA0D260	0	STATE ROUTE 90 CONNECTOR ROAD TO ADMIRALTY WAY. THIS PROJECT WILL IMPROVE THE SR-90/SR-1 INTERSECTION INCLUDING THE ADDITION OF A LANE IN EACH DIRECTION AND CONSTRUCTION OF A DIRECT ROAD BETWEEN ADMIRALTY WAY AND SR-90	\$6,000
LOS ANGELES	LOCAL HIGHWAY	LA0D461	0	RECONSTRUCT - THE OLD ROAD FROM HILLCREST PARKWAY TO LAKE HUGHES RD & WIDEN FROM 40' TO 68'; 2 VEH. LANES AND A 5' CLASS II BIKE LANE IN EA DIR & STRIPPED MEDIAN (FROM 2 TO 4 LNS & EA DIR) FOR 2.1 MILES.	\$24,743
LOS ANGELES	LOCAL HIGHWAY	LA0D465	0	COLIMA ROAD - CITY OF WHITTIER LIMITS TO FULLERTON ROAD, FOR A TOTAL DISTANCE OF 4.9 MILES. THE PROJECT WILL WIDEN COLIMA RD BY UP TO SIX FEET AT SPOT LOCATIONS AND RESTRIPE TO ACCOMMODATE THREE THROUGH LANES IN EACH DIRECTION. A CLASS II BIKEWAY FROM THE CITY OF WHITTIER WILL BE EXTENDED TO ALLENTON AV. A DISTANCE OF 1.2 MILES, AND BUS PADS WILL BE REPLACED. INCLUDES MEDIAN LANDSCAPING. TOLL CREDITS USED TO MATCH FY 14/15 AND FY 15/16 CMAQ.	\$11,538
LOS ANGELES	LOCAL HIGHWAY	LA0G1068	0	INTERSECTION IMPROVEMENTS AT NORWALK BOULEVARD AND WASHINGTON BOULEVARD. PROVIDE ADDITIONAL WESTBOUND THRU LANE ALONG WASHINGTON BOULEVARD. INCREASE NORTHBOUND LEFT TURN STORAGE ALONG NORWALK BOULEVARD.	\$550
LOS ANGELES	LOCAL HIGHWAY	LA0G1069	0	VARIOUS INTERSECTION IMPROVEMENTS AT NORWALK BOULEVARD AND WHITTIER BOULEVARD INCLUDING LEFT TURN PHASING, RIGHT TURN PHASING, ADDING RIGHT TURN LANES, AND LEFT TURN STORAGE LENGTHENING. A THRU LANE WILL BE CONFIGURED THROUGH SOME WIDENING AND RE-STRIPPING ON SOUTHBOUND NORWALK ABOUT 350 FEET ON BOTH SIDES OF THE INTERSECTION	\$2,830
LOS ANGELES	LOCAL HIGHWAY	LA0G1070	0	THE PROJECT IS VARIOUS INTERSECTION IMPROVEMENTS AT CARMENITA ROAD AND TELEGRAPH RD. THE WORK CONSISTS OF: PROVIDE ADDITIONAL NB THRU LANE ALONG CARMENITA RD. PROVIDE ADDITIONAL EB LEFT TURN LANE ALONG TELEGRAPH RD. INCREASE WB LEFT TURN STORAGE ALONG TELEGRAPH RD AND TELEGRAPH RD TO BE SIGNED AS A CLASS III BIKE ROUTE IN ACCORDANCE WITH THE LA COUNTY BICYCLE MASTER PLAN.	\$800
LOS ANGELES	LOCAL HIGHWAY	LA0G1072	0	VARIOUS INTERSECTION IMPROVEMENTS AT VALLEY VIEW AVENUE AND IMPERIAL HIGHWAY INCLUDING: PROVIDE ADDITIONAL WB LEFT TURN LANE ALONG IMPERIAL HIGHWAY, PROVIDE NB RIGHT TURN OVERLAP PHASING, PROVIDE ADDITIONAL EB LEFT TURN LANE ALONG IMPERIAL HIGHWAY, AND VALLEY VIEW AVE TO BE SIGNED AS A CLASS III BIKE ROUTE IN ACCORDANCE WITH THE LA COUNTY BICYCLE MASTER PLAN	\$1640

TABLE 1 FTIP Projects - Continued

County	System	FTIP ID	Route #	Description	Project Cost (\$1,000's)
LOS ANGELES	LOCAL HIGHWAY	LA061073	0	VARIOUS INTERSECTION IMPROVEMENTS AT PAINTER AVENUE AND MULBERRY DRIVE INCLUDING: PROVIDE ADDITIONAL NB LEFT TURN LANE ALONG PAINTER AVE, PROVIDE EB RIGHT TURN POCKET ALONG MULBERRY DR, INCREASE EB LEFT TURN STORAGE ALONG MULBERRY DR, PROVIDE WB RIGHT TURN POCKET ALONG MULBERRY DR, INCREASE WB LEFT TURN STORAGE ALONG MULBERRY DR, PROVIDE NB RIGHT TURN POCKET ALONG PAINTER AVE, PROVIDE SB RIGHT TURN POCKET ALONG PAINTER AVE.	\$2,410
LOS ANGELES	LOCAL HIGHWAY	LA061089	0	THIS PROJECT IS A STUDY THAT PROPOSES TO WIDEN A 0.4 MILE SEGMENT OF FULLERTON ROAD BY INCREASING THE NUMBER OF LANES FROM 4 TO 6 LANES BETWEEN THE SR-60 EASTBOUND RAMP AND CAMINO BELLO. TOLL CREDITS - LOCAL AND STATE HWY OF \$173 WILL BE USED TO MATCH FY16 FEDERAL FUNDS FOR THE PE PHASE	\$1,500
LOS ANGELES	LOCAL HIGHWAY	LA061108	0	MATCH TO HBP 3471 - LOS ANGELES COUNTY 3471 PM00043, BRIDGE PREVENTIVE MAINTENANCE PROGRAM, VARIOUS LOCATIONS WITHIN THE COUNTY OF LOS ANGELES. THIS PROJECT IS THE MATCH TO HBP 3471 IN GROUP PROJECT LA000800. TOLL CREDITS OF \$273 WILL BE USED TO MATCH FY15 FEDERAL FUNDS FOR THE CON PHASE. TOLL CREDITS - LOCAL AND STATE HWY OF \$273 WILL BE USED TO MATCH FY15 FEDERAL FUNDS FOR THE CON PHASE	\$2,499
LOS ANGELES	LOCAL HIGHWAY	LA061126	0	NON-INFRASTRUCTURE PEDESTRIAN PLANS AND PROGRAMS IN THE UNINCORPORATED COMMUNITIES OF WEST WHITTIER-LOS NIETOS, LAKE LOS ANGELES, WEST ATHENS-WESTMONT AND WALNUT PARK. SCOPE OF WORK INCLUDES DATA COLLECTION AND ANALYSIS, COMMUNITY PARTICIPATORY PLANNING VIA COLLABORATION, PUBLIC AWARENESS MEDIA CAMPAIGN ACROSS UNINCORPORATED COUNTY COMMUNITIES, AND TAILORED, CULTURALLY-COMPETENT OUTREACH, EDUCATION AND ENCOURAGEMENT PROGRAMS SPECIFIC TO EACH COMMUNITY.	\$1,498
LOS ANGELES	LOCAL HIGHWAY	LA061127	0	THE PROJECT INVOLVES CONSTRUCTION OF 0.6-MILE LONG CLASS I BIKE AND MULTIUSE PATH FACILITY. PROJECT IS LOCATED IN THE UNINCORPORATED AREA OF NORTHELMONTE. THE TRAIL IS A KEY EAST-WEST GAP CLOSURE TO CONNECT RIO HONDO BIKE TRAIL TO THE SAN GABRIEL RIVER REGIONAL BIKE TRAIL. A DIRECT CONNECTION TO ELMONTE SCHOOL FROM THE EXISTING RIO HONDO CHANNEL BIKEWAY IS ALSO PROPOSED AS PART OF THIS PROJECT. TOLL CREDITS OF \$23 WILL BE USED TO MATCH FY16 FEDERAL FUNDS FOR THE CON PHASE. TOLL CREDITS - LOCAL AND ST	\$2,574
LOS ANGELES	LOCAL HIGHWAY	LA061146	0	KENNETH HAHN STATE REC AREA-PARK TO PLAYA TRAIL (RT-19-034)	\$2,400
LOS ANGELES	LOCAL HIGHWAY	LA061197	0	INSTALL 1.8 MILE BIKE LANES ON 170TH STE BETWEEN AVENUE M-4 AND AVENUE M-8 AND BETWEEN EAST AVENUE P AND EAST PALMDALE BOULEVARD. PROJECT IS PART OF HIGHWAY SAFETY IMPROVEMENT PROGRAM. TOLL CREDITS WILL BE USED TO MATCH FY17 FEDERAL FUNDS FOR THE CON PHASE	\$898
LOS ANGELES	LOCAL HIGHWAY	LA069998	0	THIS PROJECT PROPOSES TO WIDEN A 0.4 MILE SEGMENT OF FULLERTON ROAD BY INCREASING THE NUMBER OF LANES FROM 4 TO 6 LANES BETWEEN THE SR-60 EASTBOUND RAMP AND CAMINO BELLO. \$57 OF TOLL CREDIT FOR FY16/17 AND \$115 OF TOLL CREDIT FOR FY17/18 FOR PA&E/PS&E. \$229 OF TOLL CREDIT FOR CON FOR FY18/19. TOLL CREDITS OF \$57 WILL BE USED TO MATCH FY17 FEDERAL FUNDS FOR THE PE PHASE, TOLL CREDITS OF \$115 WILL BE USED TO MATCH FY18 FEDERAL FUNDS FOR THE PE PHASE, TOLL CREDITS OF \$229 WILL BE USED TO MATCH FY19 FEDE	\$3,500
LOS ANGELES	LOCAL HIGHWAY	LA9711031	0	CASTAIC CUTOFF FROM LAKE HUGHES RD TO SAN FRANCISCO CANYON RD CONSTRUCT NEW ROAD 412-FOOT LANES AND 10-FOOT SHOULDERS	\$7,600
LOS ANGELES	LOCAL HIGHWAY	LA E0896	0	THIS PROJECT WILL INVOLVE INSTALLATION OF FIBER OPTIC COMMUNICATIONS FOR THE TRAFFIC SIGNALS ALONG COLIMA ROAD FROM AZUSA AVE TO STONER CREEK ROAD AND ALONG FULLERTON ROAD FROM COLIMA ROAD TO GALE AVENUE. CAMERAS AND CONNECTING CABLES WILL BE INSTALLED AT THE INTERSECTION OF COLIMA ROAD AND STONER CREEK ROAD. A RIGHT TURN LANE WILL ALSO BE ADDED TO THE INTERSECTION OF COLIMA ROAD AND FULLERTON ROAD	\$1,500
LOS ANGELES	LOCAL HIGHWAY	LA E1228	0	REPAIR ROSECRANS AND ALONDRA BRIDGES PER THE COUNTY OF LOS ANGELES TRIENNIAL INSPECTION REPORT.	\$49
LOS ANGELES	LOCAL HIGHWAY	LA E1920	0	DE LAMO BLVD - FROM NORMANDIE AVE AND NEW HAMPSHIRE - RECONSTRUCT AND WIDEN . FROM 1 LANE EA DIR TO 2 LANES IN EA DIR.	\$29,320
LOS ANGELES	LOCAL HIGHWAY	LA F1311	0	SOUTH BAY FORUM TRAFFIC SIGNAL CORRIDORS PROJECT. DESIGN & CONSTRUCTION OF MULTIJURISDICTIONAL TRAFFIC SIGNAL SYNCHRONIZATION, INTERSECTION OPERATIONAL IMPROVEMENTS, AND INTELLIGENT TRANSP. SYSTEM COMPONENTS ON REGIONAL ARTERIALS. SYNCHRONIZES 50 CONSECUTIVE INTERSECTIONS.	\$8,962
LOS ANGELES	LOCAL HIGHWAY	LA F1312	0	GATEWAY CITIES FORUM TRAFFIC SIGNAL CORRIDORS, PHASE V. DESIGN AND CONSTRUCTION OF MULTIJURISDICTIONAL TRAFFIC SIGNAL SYNCHRONIZATION AND INTERSECTION OPERATIONAL IMPROVEMENTS ON REGIONAL ARTERIALS IN THE GATEWAY CITIES REGION. INCLUDES 86 CONSECUTIVE INTERSECTIONS.	\$16,893
LOS ANGELES	LOCAL HIGHWAY	LA F1321	0	SAN GABRIEL VALLEY FORUM TRAFFIC SIGNAL CORRIDORS PROJECT. DESIGN & CONSTRUCTION OF MULTIJURISDICTIONAL TRAFFIC SIGNAL SYNCHRONIZATION, INTERSECTION OPERATIONAL IMPROVEMENTS, AND INTELLIGENT TRANSPORTATION SYSTEM COMPONENTS. SYNCHRONIZES 83 CONSECUTIVE INTERSECTIONS.	\$19,286
LOS ANGELES	LOCAL HIGHWAY	LA F1514	0	EMERALD NECKLACE BIKE TRAIL PROJECT. DESIGN AND CONSTRUCT 1.1 MILES OF CLASS I BIKE PATH TO CONNECT DUARTE ROAD TO THE SAN GABRIEL RIVER BICYCLE TRAIL	\$503

TABLE 1 FTIP Projects - Continued

County	System	FTIP ID	Route #	Description	Project Cost (\$1,000's)
LOS ANGELES	LOCAL HIGHWAY	LAF1634	0	EL PUEBLO PEDESTRIAN IMPROVEMENTS PHASE I, II, III, & IV. DESIGN AND CONSTRUCTION OF ENHANCED FACILITIES TO IMPROVE & ASSIST PEDESTRIAN MOVEMENT IN THE EL PUEBLO DISTRICT & OTHER LANDMARKS IN DOWNTOWN LA. WAYFINDING ELEMENT IN TDM F1718.	\$12,763
LOS ANGELES	LOCAL HIGHWAY	LAF1718	0	EL PUEBLO PEDESTRIAN IMPROVEMENTS PHASE I, II, III, & IV. WAYFINDING ELEMENT OF ENHANCED PEDESTRIAN FACILITIES TO IMPROVE AND ASSIST PEDESTRIAN MOVEMENT IN THE EL PUEBLO DISTRICT & OTHER LANDMARKS IN DOWNTOWN LA. ALSO IN PED MODE (F1634)	\$1,746
LOS ANGELES	LOCAL HIGHWAY	LAF3136	0	WIDEN THE OLD ROAD FROM NORTH OF MAGIC MOUNTAIN PKWY TO HENRY MAYO DR TO 1200 FT WEST OF THE OLD ROAD. PROJECT IS LOCATED ON THE OLD RD. FROM APPROXIMATELY 700 FT NORTH OF MAGIC MOUNTAIN PARKWAY TO HENRY MAYO DR FROM THE OLD ROAD TO THE SR126 HOOK RAMPS, AND RYE CANYON RD BTWN THE OLD RADD AND AVENUE STANFORD. WIDENING FROM 4 TO 6 LANES TO REDUCE BOTTLENECK. TOLL CREDITS WILL BE USED TO MATCH STPL FUNDS.	\$67,222
LOS ANGELES	LOCAL HIGHWAY	LAF3308	0	SAN GABRIEL VALLEY FORUM TRAFFIC SIGNAL CORRIDORS PROJECT. DESIGN AND CONSTRUCTION OF MULTIJURISDICTIONAL TRAFFIC SIGNAL SYNCH, INTERSECTION OPERATIONAL IMPROVEMENTS, AND INTELLIGENT TRANSPORTATION SYSTEM COMPONENTS ON REGIONAL ARTERIALS. APPROX. 183 SIGNALS TOTAL.	\$24,812
LOS ANGELES	LOCAL HIGHWAY	LAF3309	0	GATEWAY CITIES FORUM TRAFFIC SIGNAL CORRIDORS PROJ. PHASE VI. DESIGN AND CONSTRUCT MULTIJURISDICTIONAL TRAFFIC SIGNAL SYNCHRONIZATION, INTERSECTION OPERATIONAL IMPROVEMENTS & ITS COMPONENTS ON REGIONAL ARTERIALS IN GATEWAY CITIES AREA. (APPROX. 126 SIGNALS)	\$14,786
LOS ANGELES	LOCAL HIGHWAY	LAF3310	0	SOUTH BAY FORUM TRAFFIC SIGNAL CORRIDORS PROJECT. DESIGN AND CONSTRUCTION OF MULTIJURISDICTIONAL TRAFFIC SIGNAL SYNCHRONIZATION, OPERATIONAL IMPROVEMENTS & ITS COMPONENTS ON ARTERIALS IN THE SOUTH BAY AREA OF LA COUNTY. (APPROX 40+ SIGNALS)	\$12,980
LOS ANGELES	LOCAL HIGHWAY	LAF3519	0	NORTH COUNTY BIKEWAYS. INSTALL THREE CLASS II AND THREE CLASS III BIKEWAY SEGMENTS, INCLUDING SIGNAGE, STRIPING, ROAD WIDENING, & ROAD SHOULDER IMPROVEMENTS. (APPROX. 3.88 MILES OF BIKE LANES AND 3.18 MILES OF BIKE ROUTES.)	\$1,825
LOS ANGELES	LOCAL HIGHWAY	LAF3628	0	WILLOWBROOK AREA ACCESS IMPROVEMENTS TO MLK MACC. THIS PROJECT WILL CONSTRUCT SIDEWALK IMPROVEMENTS AND RELOCATE SIGNAL FACILITIES BETWEEN THE IMPERIAL/WILMINGTON METRO RAIL STATION AND THE MLK MACC. THE PROJECT IS LOCATED IN THE UNINCORPORATED WILLOWBROOK AREA NEAR THE ROSA PARKS METRO RAIL STATION AND THE MLK JR. MULTI-SERVICE AMBULATORY CARE CENTER (MACC). TOLL CREDITS - TRANSIT (TDC) OF \$58 WILL BE USED TO MATCH FY16 FEDERAL FUNDS FOR THE CON PHASE	\$5,691
LOS ANGELES	LOCAL HIGHWAY	LAF3716	0	WILLOWBROOK AREA ACCESS IMPROVEMENTS TO MLK MACC. IMPLEMENT WAYFINDING SYSTEM INCLUDING TRANSIT INFORMATION AS PART OF A LARGER PROJECT, INCLUDING PEDESTRIAN IMPROVEMENTS, BIKEWAY & STREET SCAPING. THE PROJECT IS LOCATED IN THE COUNTY OF LOS ANGELES, IN THE UNINCORPORATED COMMUNITY OF WILLOWBROOK NEAR THE IMPERIAL/WILMINGTON ROSA PARKS METRO RAIL STATION AND THE MARTIN LUTHER KING JR. MULTI-SERVICE AMBULATORY CARE CENTER (MACC).	\$665
LOS ANGELES	LOCAL HIGHWAY	LAF5110	0	FULLERTON ROAD AT PATHFINDER ROAD, ET AL. PROJECT SCOPE INCLUDES WIDENING AND RESTRIPING THE INTERSECTIONS OF PATHFINDER RD AT FULLERTON RD AND PATHFINDER RD AT BREA CANYON CUTOFF TO ADD TURN LANES. THE PROJECT WILL ADD A 5-FOOT WIDE CLASS II BIKE LANE ON BOTH SIDES OF PATHFINDER RD LEADING FROM THE INTERSECTION OF PATHFINDER RD AT FULLERTON RD TO THE PATHFINDER COUNTY PARK ENTRANCE, A ONE-QUARTER MILE DISTANCE.	\$918
LOS ANGELES	LOCAL HIGHWAY	LAF5115	0	AVENUE L ROADWAY WIDENING PROJECT: WIDEN AVENUE L FROM ONE LANE TO TWO LANES IN EACH DIRECTION FROM 40TH ST WEST TO 57TH ST (TOTAL DISTANCE 1.7 MI) INCLUDE LEFT- AND RIGHT-TURN POCKETS WHERE AVENUE L INTERSECTS WITH 40TH, 42ND, 45TH, 50TH AND 55TH STREETS. CURBS AND GUTTER RECONSTRUCTION, A 12-FOOT WIDE CLASS II BIKE LANE IN EACH DIRECTION AND 8-FOOT WIDE SIDEWALKS ON BOTH SIDES OF THE STREET.....	\$11,094
LOS ANGELES	LOCAL HIGHWAY	LAF5310	0	RAMONA BOULEVARD/BADILLO STREET/COVINA BOULEVARD TSSP/BSP. IMPLEMENTATION OF A TRAFFIC SIGNAL SYNCHRONIZATION PROJECT (TSSP) ON RAMONA BL/BADILLO ST/COVINA BL FROM SANTA ANITA AV TO THE 57 FREEWAY. A BUS SIGNAL PRIORITY (BSP) PROJECT WILL BE IMPLEMENTED ON RAMONA BL/BADILLO ST FROM TYLER AV TO GRAND AV TO GIVE TRANSIT PRIORITY FOR FOOTHILL TRANSIT OPERATIONS (APPROX. 48 SIGNAL LOCATIONS)	\$4,242
LOS ANGELES	LOCAL HIGHWAY	LAF5314	0	GATEWAY CITIES FORUM TRAFFIC SIGNAL CORRIDORS PROJECT - IMPROVE TRAFFIC SIGNAL OPERATIONS BY UPGRADING EACH TRAFFIC SIGNAL TO FEDERAL AND STATE STANDARDS, PROVIDING ADDITIONAL VEHICLE DETECTION TO ENABLE OPERATION AS A FULLY TRAFFIC-ACTUATED SIGNAL, INSTALLING THE APPROPRIATE COMPONENTS TO ENABLE EACH SIGNAL TO BE CAPABLE OF TIME-BASED COORDINATION AND RETIMING SIGNALS TO IMPROVE THE OVERALL PROGRESSION OF TRAFFIC. (APPROXIMATELY 17 SIGNALS INCLUDED)	\$2,481
LOS ANGELES	LOCAL HIGHWAY	LAF5315	0	SAN GABRIEL VALLEY FORUM TRAFFIC SIGNAL CORRIDORS PROJECT. THIS PROJECT INCLUDES 6 INTERSECTIONS AT MYRTLE AV/PECK RD BETWEEN HUNTINGTON DR AND CLARK ST AND PROVIDES FOR SYSTEM WIDE COORDINATION, TIMING AND OPERATIONAL IMPROVEMENTS AND TRAFFIC SIGNAL SYNCHRONIZATION, EQUIPMENT UPGRADES AND INTERSECTION OPERATIONAL IMPROVEMENTS. (APPROX. 20+ SIGNALS)	\$1,551

TABLE 1 FTIP Projects - Continued

County	System	FTIP ID	Route #	Description	Project Cost (\$1,000's)
LOS ANGELES	LOCAL HIGHWAY	LAF5316	0	SOUTH BAY FORUM TRAFFIC SIGNAL CORRIDORS PROJECT - SYSTEMWIDE COORDINATION, TIMING AND OPERATIONAL IMPROVEMENTS AND TRAFFIC SIGNAL SYNCHRONIZATION, EQUIPMENT UPGRADES AND INTERSECTION OPERATIONAL IMPROVEMENTS IN SOUTH BAY REGION. 25 SIGNALS SYSTEM WIDE. ADDITIONALLY, THIS PROJECT WILL INSTALL ANY WARRANTED AND FEASIBLE ROADWAY IMPROVEMENTS ALONG THE ROUTES TO IMPROVE OVERALL PROGRESSION.	\$2,351
LOS ANGELES	LOCAL HIGHWAY	LAF5514	0	VERMONT AVE BIKE LANE - MANCHESTER BLVD TO EL SEGUNDO BLVD. FUNDS ARE REQUESTED TO DESIGN AND CONSTRUCT CLASS II BIKE LANES ON VERMONT AV (3.0 MILES). SHORT TERM BICYCLE RACKS (14) ARE ALSO PROPOSED AT KEY DESTINATIONS.. TOLL CREDITS OF \$10 WILL BE USED TO MATCH FY16 FEDERAL FUNDS FOR THE CON PHASE	\$1,317
LOS ANGELES	LOCAL HIGHWAY	LAF5515	0	FLORENCE METRO BLUE LINE STATION BIKEWAY ACCESS IMPROVEMENTS, DESIGN AND CONSTRUCT 11.19 MILES OF CLASS III BIKE ROUTES WITH SHARROWS AND ENHANCED TREATMENTS (BICYCLE BOULEVARD). SHORT-TERM BICYCLE PARKING WILL BE PROVIDED AND LIMIT LINE LOOP DETECTORS WILL BE UPGRADED TO DETECT BICYCLES AT ALL REQUIRED SIGNALIZED INTERSECTIONS. CLASS III BIKE ROUTES WITH SHARROWS WILL BE INSTALLED AT VARIOUS LOCATIONS. TOLL CREDITS - LOCAL AND STATE HWY OF \$18 WILL BE USED TO MATCH FY16 FEDERAL FUNDS FOR THE CON PHASE	\$1624
LOS ANGELES	LOCAL HIGHWAY	LAF5704	0	METRO GREEN LINE VERMONT STATION WAYFINDING SIGNAGE. THIS PROJECT IS LOCATED IN THE UNINCORPORATED COMMUNITY OF WEST ATHENS/ WESTMONT WITHIN ONE-AND-A-HALF MILE RADIUS OF THE METRO GREEN LINE VERMONT STATION. THIS WAYFINDING SIGNAGE PROJECT WILL DIRECT CYCLISTS AND PEDESTRIANS WHO ARE TRAVELING TO OR FROM THE GREEN LINE VERMONT STATION.	\$496
LOS ANGELES	LOCAL HIGHWAY	LAF7305	0	GATEWAY CITIES FORUM TRAFFIC SIGNAL CORRIDOR PROJECT : DESIGNS AND CONSTRUCTS ITS IMPROVEMENTS ALONG NORWALK BL, SAN ANTONIO DR, PIONEER BL BETWEEN BEVERLY BL AND CARSON ST INCLUDING SYNCHRONIZATION AND RETIMING OF TRAFFIC SIGNALS, EQUIPMENT UPGRADES, SYSTEM DETECTION, CCTV CAMERAS (UPTO 14 CCTVS), AND CHANGEABLE MESSAGE SIGNS.	\$4,048
LOS ANGELES	LOCAL HIGHWAY	LAF7306	0	FOOTHILL BOULEVARD TRAFFIC SIGNAL CORRIDOR PROJECT : (1) TRAFFIC SIGNAL SYNCHRONIZATION, EQUIPMENT UPGRADES AND INTERSECTION OPERATIONAL IMPROVEMENTS FOR 28 INTERSECTIONS ALONG FOOTHILL BL BETWEEN LOWELL AV AND CROWN AV. (2) INSTALLS TWO (2) CLOSED CIRCUIT TELEVISION (CCTV) CAMERAS AND WIRELESS NETWORK COMMUNICATIONS INFRASTRUCTURE WHICH WILL PROVIDE FOR EXPANSION OF ADVANCED TRANSPORTATION MANAGEMENT SYSTEM (ATMS) ALONG FOOTHILL BL.	\$3,660
LOS ANGELES	LOCAL HIGHWAY	LAF7307	0	SAN GABRIEL VALLEY FORUM TRAFFIC SIGNAL CORRIDOR PROJECT : IMPLEMENTS ITS ENHANCEMENTS INCLUDING SYNCHRONIZATION AND RETIMING OF TRAFFIC SIGNALS, EQUIPMENT UPGRADES, SYSTEM DETECTION, CCTV CAMERAS, AND CHANGEABLE MESSAGE SIGNS TO EXPAND ADVANCED TRANSPORTATION MANAGEMENT SYSTEM (ATMS).	\$4,531
LOS ANGELES	LOCAL HIGHWAY	LAF7308	0	EAST LOS ANGELES TRAFFIC SIGNAL CORRIDOR PROJECT : (1) SYNCHRONIZES TRAFFIC SIGNALS AND IMPLEMENTS UPGRADES AT 13 SIGNALIZED INTERSECTIONS ALONG 3.5 MILE SEGMENT OF EASTERN AV, BETWEEN MEDFORD ST AND OLYMPIC BLVD. (2) INSTALLS FIBER OPTIC COMMUNICATIONS ALONG CESAR CHAVEZ AV, RAMONA BL, AND ATLANTIC BL TO CONNECT TRAFFIC SIGNALS TO LADPW ADVANCED TRANSPORTATION MANAGEMENT SYSTEM (ATMS).	\$3,430
LOS ANGELES	LOCAL HIGHWAY	LAF7310	0	SOUTH BAY FORUM TRAFFIC SIGNAL CORRIDORS PROJECT - PROJECT AREA IS NORMANDIE AV BETWEEN 92ND ST AND EL SEGUNDO BL, MANHATTAN BEACH BL BETWEEN MANHATTAN AV AND VAN NESS AV, AND HAWTHORNE BL BETWEEN IMPERIAL HIGHWAY AND MANHATTAN BEACH BL. PROJECT SCOPE INCLUDES (1) SYNCHRONIZATION AND RETIMING TRAFFIC SIGNALS, EQUIPMENT UPGRADES, SYSTEM DETECTION, CCTV CAMERAS, CHANGEABLE MESSAGE SIGNS. (2) UPGRADE TRAFFIC SIGNAL OPERATIONS TO BE CAPABLE OF TIME-BASED COORDINATION.	\$5,103
LOS ANGELES	LOCAL HIGHWAY	LAF7703	0	EXPERIENELA 3.0-MOBILITY IN THE CLOUD : DEVELOPS AND IMPLEMENTS CLOUD COMPUTING BASED SOFTWARE TECHNOLOGY TO PROVIDE TRANSIT USERS LOCATION SPECIFIC INFORMATION VIA PERSONAL MOBILE DEVICES AND INTERACTIVE KIOSKS AT KEY TRANSPORTATION FACILITIES.	\$974
LOS ANGELES	LOCAL HIGHWAY	LAF7806	0	VERMONT AVENUE STREETSCAPE IMPROVEMENT PROJECT: (1) INSTALLS STREETSCAPE IMPROVEMENTS THAT INCLUDE LANDSCAPING AND PLANTING OF DROUGHT TOLERANT TREES, PERMEABLE CONCRETE PAVERS, NON-PERMEABLE INTERLOCKING CONCRETE PAVERS AT BUS STOPS, AND DECORATIVE CROSSWALKS. (2) LANDSCAPING WILL HAVE AUTOMATED IRRIGATION SYSTEM AND FLOW-THROUGH FILTRATION PLANTERS.	\$956
LOS ANGELES	LOCAL HIGHWAY	LA0C8164	0	EXPOSITION BLVD RIGHT-OF-WAY BIKE PATH-WESTSIDE EXTENSION, DESIGN AND CONSTRUCTION OF 2.5 MILES OF CLASS I BIKEWAY, LIGHTING, LANDSCAPING & INTERSECTION IMPROVEMENTS. (PPNG# 3184)	\$14,710
LOS ANGELES	LOCAL HIGHWAY	LA0G1047	0	ROSECRANS/MARQUARDT GRADE SEPARATION: THIS PROJECT INCLUDES CONSTRUCTION OF BNSF THIRD TRACK AND GRADE SEPARATION AT THE INTERSECTION OF ROSECRANS/MARQUARDT IN THE CITY OF SANTA FE SPRINGS. THIS WILL RESULT IN ENHANCING THE SAFETY AND TRAFFIC FLOW ON SURFACE STREETS THROUGHOUT THE RAIL CORRIDOR AS WELL AS ENHANCING THE EFFICIENCY OF TRAIN MOVEMENT AND POSSIBLY ATTRACT MORE RIDERSHIP.	\$120,000
LOS ANGELES	LOCAL HIGHWAY	LA0G1050	0	DORAN STREET GRADE SEPARATION, DEVELOP A GRADE SEPARATION AT DORAN STREET ON THE METROLINK VALLEY SUBDIVISION TO IMPROVE SAFETY.	\$40,000

TABLE 1 FTIP Projects - Continued

County	System	FTIP ID	Route #	Description	Project Cost (\$1,000's)
LOS ANGELES	LOCAL HIGHWAY	LA06113	0	ACTIVE TRANSPORTATION EDUCATION PROGRAM THAT WILL FUND TEMPORARY ONE-DAY "OPEN STREET" EVENTS THROUGHOUT LOS ANGELES COUNTY. "OPEN STREET" EVENTS CLOSE STREETS TO AUTOMOTIVE TRAFFIC AND OPEN THEM TO PEOPLE TO WALK, BIKE AND TAKE TRANSIT.....	\$4,000

County	System	FTIP ID	Route #	Description	Project Cost (\$1,000's)
LOS ANGELES	LOCAL HIGHWAY	LA0F007	0	LENDALE BLVD. - HYPERION AVE. COMPLEX OF BRIDGES OVER LA RIVER, I-5 AND RIVERSIDE DR. REHABILITATION/SEISMIC RETROFIT; UPGRADE BRIDGE RAILING; INCLUDES BRIDGES 53C-1881, 53C-1882, 53C-1883, 53C-1884, 53C-1885, 53C-1886, 53C-1887 AND 53-1069. NO ADDITIONAL LANES. REALIGN I-5 NORTH BOUND OFF RAMP. CONSTRUCT A PEDESTRIAN BRIDGE OVER LA RIVER (APPROX. 426 FEET). (FED PROJECT ID: BHL5-5006(18))	\$41,056
LOS ANGELES	LOCAL HIGHWAY	LA0F008	0	LENDALE BLVD. OVER LA RIVER. REHABILITATE / RETROFIT BRIDGE AND WIDEN BY 12 FEET. UPGRADE BRIDGE RAILINGS. NO ADDED LANES. PRELIMINARY ENGINEERING ONLY. CONSTRUCTION TO BE DONE UNDER LA0F007 (53C1881) LENDALE-HYPERION COMPLEX OF BRIDGES. (#53C-1883)	\$1,930
LOS ANGELES	LOCAL HIGHWAY	LA0F009	0	LENDALE BLVD. OVER LA RIVER. REHABILITATE / RETROFIT BRIDGE AND WIDEN BY 12 FEET. UPGRADE BRIDGE RAILINGS. NO ADDED LANES. PRELIMINARY ENGINEERING ONLY. CONSTRUCTION TO BE DONE UNDER LA0F007 (53C1881) LENDALE-HYPERION COMPLEX OF BRIDGES. (BRIDGE #53C1884, BHL5-5006(187))	\$2,350
LOS ANGELES	LOCAL HIGHWAY	LA0G104	0	BRIDGE NO. 53C1880/530595. SIXTH STREET, OVER LA RIVER, E SANTA ANA FREEWAY. REPLACE SEISMICALLY/STRUCTURALLY DEFICIENT SIXTH STREET VIADUCT WITH NEW VIADUCT. NO LANES BEING ADDED. TOLL CREDITS USED IN LIEU OF PROP'IB SEISMIC BOND FUNDS.	\$421,817
LOS ANGELES	LOCAL HIGHWAY	LA0G185	0	EXPRESS LANES - TRAFFIC CALMING FOR THOSE WALKING OR BICYCLING INCLUDING SHARROWS. SPEED HUMPS, ADA RAMPS, ROUABOUTS, CURB EXTENSIONS ON BUDLONG AVENUE BETWEEN EXPOSITION AND GAGE AVENUE.	\$16,632
LOS ANGELES	LOCAL HIGHWAY	LA0G186	0	EXPRESS LANES - AT&SAC CONSTRUCTION OF NEW COMMUNICATIONS PATH TO CLOSE GAP AND ENSURE LESS FREQUENT INTERRUPTIONS OF DATA COMMUNICATIONS.	\$1,500
LOS ANGELES	LOCAL HIGHWAY	LA0G187	0	EXPRESS LANES - CESAR CHAVEZ GREAT ST. FROM EVERGREEN TO ST. LOUIS ST. THE PROJECT INCLUDES PLANS TO EXPAND SIDEWALKS, GROW TREES AND PLANTS, IMPROVE STREET LIGHTING AND ADD STREET FURNITURE.	\$435
LOS ANGELES	LOCAL HIGHWAY	LA0G181	0	ATCS - CENTRAL BUSINESS DISTRICT. DEVELOP A FULLY TRAFFIC RESPONSIVE SIGNAL CONTROL SYSTEM TO APPROXIMATELY 180 INTERSECTIONS CURRENTLY OPERATIONAL WITH AT&SAC CAPABILITY.	\$9,215
LOS ANGELES	LOCAL HIGHWAY	LA0G182	0	THE CENTRAL CITY/EAST PROJECT WILL PROVIDE A FULLY TRAFFIC RESPONSIVE SIGNAL CONTROL SYSTEM TO APPROXIMATELY 150 INTERSECTIONS CURRENTLY OPERATIONAL WITH AT&SAC CAPABILITY.	\$4,885
LOS ANGELES	LOCAL HIGHWAY	LA0G686	0	HIGHLAND PARK PEDESTRIAN IMPROVEMENTS ALONG FIGUEROA BETWEEN AVENUE 60 AND AVENUE 60	\$250
LOS ANGELES	LOCAL HIGHWAY	LA0G709	0	EL DORADO & BROMWICH SIDEWALK IMPROVEMENTS - IMPROVEMENTS WILL BE ON: 1) EL DORADO AV-BROMWICH ST TO MONTAGUE ST, AND 2) BROMWICH ST-EL DORADO AV TO SAN FERNANDO RD. CONSTRUCTION ELEMENTS WILL INCLUDE CONCRETE CURB, GUTTER, SIDEWALKS, ADA-COMPLIANT ACCESS RAMPS AND ASPHALT CONCRETE PAVING.	\$586
LOS ANGELES	LOCAL HIGHWAY	LA0G70	0	ECHO PARK/SUNSET BL. STREETSCAPE BEAUTIFICATION - PROJECT WILL PROVIDE FOR CONSTRUCTION OF PEDESTRIAN AND STREETSCAPE IMPROVEMENTS ALONG SUNSET BL IN THE ECHO PARK AREA. PROJECT ELEMENTS WILL INCLUDE SIDEWALK IMPROVEMENTS, STREET TREES, TRANSIT AMENITIES, AND PARKWAY LANDSCAPING.	\$708
LOS ANGELES	LOCAL HIGHWAY	LA0G860	0	LEMON GROVE LIGHTING PHASE 2 - LEMON GROVE AREA BOUNDED BY SANTA MONICA BLVD(NORTH), WESTERN AVE (WEST), LEMON GROVE AVE (SOUTH) AND THE HOLLYWOOD FREEWAY (EAST). INSTALL NEW STREET LIGHTING SYSTEM - INSTALLATION OF NEW CONDUIT, WIRING, PULLBOXES, FOUNDATIONS, STREET LIGHTING ELECTROLES. THIS PROJECT WILL USE \$31 OF TOLL CREDITS TO \$3 IN PE AND \$28 IN CONSTRUCTION IN FY2015. TOLL CREDITS OF \$3 WILL BE USED TO MATCH FY15 FEDERAL FUNDS FOR THE PE PHASE. TOLL CREDITS OF \$28 WILL BE USED TO MATCH FY15	\$267
LOS ANGELES	LOCAL HIGHWAY	LA0G899	0	THIS PROJECT WILL INSTALL SENSORS TO MONITOR OCCUPANCY AND ADJUST PRICES FOR 543 ON-STREET PARKING SPACES AND 366 OFF-STREET PARKING SPACES IN ORDER TO REDUCE EMISSIONS WHILE SEARCHING FOR PARKING.	\$750
LOS ANGELES	LOCAL HIGHWAY	LA98STIP3	0	ALAMEDA ST AND N SPRING ST ARTERIAL REDESIGN - REALIGN ALAMEDA/N SPRING ELIMINATING INEFFICIENT INTERSECTN WITH MAIN ST/N MAIN STREET. 3 NB LANES & 3 SB LANES.	\$9,555
LOS ANGELES	LOCAL HIGHWAY	LA996425	0	INSTALL REVERSIBLE LANE ON SEPULVEDA BL THROUGH TUNNEL AT MULHOLLAND DR. INSTALL BIKE FACILITIES FROM SKIRBALL CENTER DR TO BEL AIR CREST RD. IMPLEMENT INTERSECTION IMPROVEMENTS AT SKIRBALL CENTER DR, 1-405 FWY SB ON-RAMP, MORAGA DR, WILSHIRE BL. BIKE FACILITIES LESS THAN A MILE.	\$9,301
LOS ANGELES	LOCAL HIGHWAY	LAED180	0	LAUREL CANYON BLVD NEAR VICTORY BLVD. PROJECT WILL PROVIDE FOR PEDESTRIAN SAFETY AND BEAUTIFICATION TREATMENT. ELEMENTS INCLUDE LANDSCAPED MEDIAN ISLANDS.	\$1,200
LOS ANGELES	LOCAL HIGHWAY	LAED346	0	LIGHTING, AND SAFETY IMPROVEMENTS ON ROAD LEADING TO HANSEN DAM RECREATION AREA. ACCESS IMPROVEMENTS INCLUDING HILLSIDE STABILIZATION AND PARKING LOT REHABILITATION ALONG OSBORNE STREET BETWEEN GLENDALE BOULEVARD AND DRONFIELD AVENUE [REF P.L. 110-244, SEC 105(A)(23-4)] (CHANGE PER H.R.1195-6/6/08)	\$6,500

TABLE 1 FTIP Projects - Continued

County	System	FTIP ID	Route #	Description	Project Cost (\$1,000's)
LOS ANGELES	LOCAL HIGHWAY	LA E0388B	0	CONSTRUCTION OF A TRAFFIC SIGNAL AT THE INTERSECTION OF INDEPENDENCE AVE. AND SHERMAN WAY.	\$125
LOS ANGELES	LOCAL HIGHWAY	LA E0427	0	IMPLEMENT STREETScape PROJECT ON CENTRAL AVE. FROM 103RD STREET TO IMPERIAL HIGHWAY NEAR THE WATTS/103RD STREET STATION, WATTS.	\$4,000
LOS ANGELES	LOCAL HIGHWAY	LA E0518	0	IN THE CITY OF LOS ANGELES, ON BROADWAY W/S FROM 4TH ST. TO 235 N/O 4TH ST, AND 4TH ST FROM BROADWAY TO 120 W/O BROADWAY. REMOVE AND REPLACE SIDEWALKS INCLUDING PORTIONS THAT SPAN.	\$2,500
LOS ANGELES	LOCAL HIGHWAY	LA E0550	0	REHABILITATE STREET SURFACE OF CEDROS AVE BETWEEN BURBANK BLVD AND MAGNOLIA BLVD. WILL PROVIDE FOR ASPHALT CONCRETE RESURFACING. NON CAPACITY ENHANCING AND ALL ON LA ROW	\$43
LOS ANGELES	LOCAL HIGHWAY	LA E0732	0	RIVERSIDE DRIVE NON-CAPACITY IMPROVEMENTS BETWEEN VAN NUYS BLVD AND TILDEN AVE.	\$400
LOS ANGELES	LOCAL HIGHWAY	LA E0937	0	REHABILITATE STREET SURFACES IN SHERMAN OAKS; PROJECT WILL PROVIDE ASPHALT CONCRETE RESURFACING OF VARIOUS STREETS IN THE SHERMAN OAKS AREA. PROJECT WILL NOT ENHANCE TRAFFIC CAP.	\$123
LOS ANGELES	LOCAL HIGHWAY	LA E1093	0	SAN FERNANDO RD NORTH - FROM ASTORIA ST TO SAYRE ST. WIDEN ROADWAY AND CONSTRUCT CONCRETE SIDEWALK, CURB, GUTTER, ACCESS RAMPS, AND BULKHEAD.	\$1,060
LOS ANGELES	LOCAL HIGHWAY	LA E1440	0	RECONFIGURE SAN FERNANDO RD. FROM FLETCHER DR. TO I-5 FWY. INSTALL LEFT-TURN CHANNELIZATION, IMPROVE PEDESTRIAN AMENITIES, INSTALL WIDER SIDEWALKS, MEDIAN ISLANDS AND LANDSCAPING WHERE FEASIBLE BETWEEN CAZADOR STREET TO JUST SOUTH OF ALICE STREET.	\$6,450
LOS ANGELES	LOCAL HIGHWAY	LA E1531	0	CONSTRUCTION OF A SMART CROSSWALK SYSTEM AT THE INTERSECTION OF ARMINTA ST. AND MASON AVE.	\$50
LOS ANGELES	LOCAL HIGHWAY	LA E1601	0	TRANSPORTATION ENHANCEMENT TO CHILDREN'S MUSEUM OF LOS ANGELES. THIS PROJECT WILL PROVIDE FOR NEW SIDEWALKS, CURB, GUTTER, ADA-COMPLIANT ACCESS RAMPS, AND STREET TREES ALONG FOOTHILL BL AND OSBORNE ST, ADJACENT TO THE FUTURE CHILDREN'S MUSEUM OF LOS ANGELES.	\$1,200
LOS ANGELES	LOCAL HIGHWAY	LA E1816	0	BURBANK BLVD & HAYVENHURST AVE INTERSECTION IMPROVEMENTS - REDUCE WIDTH OF MEDIAN ISLANDS ON BURBANK BLVD TO INSTALL ADDITIONAL LEFT TURN LANE FROM W/B BURBANK TO S/B HAYVENHURST, AND EXCLUSIVE RIGHT TURN LANE FROM E/B BURBANK TO S/B HAYVENHURST; MODIFY TRAFFIC SIGNAL & STREET LIGHTING.	\$1,081
LOS ANGELES	LOCAL HIGHWAY	LA E1867	0	CONSTRUCTION OF SMART CROSSWALK AT THE INTERSECTION OF TOPANGA CANYON AND GAUJT ST.	\$50
LOS ANGELES	LOCAL HIGHWAY	LA E1933	0	ENHANCE BYZANTINE LATINO QUARTER TRANSIT PLAZAS AT NORMANDIE AND PICO, AND HOOVER AND PICO, LOS ANGELES BY IMPROVING STREETSCAPES, INCLUDING EXPANDING CONCRETE AND PAVING	\$500
LOS ANGELES	LOCAL HIGHWAY	LA E2147	0	NORTHWEST SAN FERNANDO VALLEY RD & SAFETY IMPROVEMENT. LINDLEY AVE. (STRATHERN TO CHASE), ROSCOE BLVD. CONSTRUCTION OF NEW ROADWAY LIGHTING ON MAJOR TRANSPORTATION CORRIDORS.	\$1,000
LOS ANGELES	LOCAL HIGHWAY	LA E2279	0	STREETSCAPE IMPROVEMENTS ALONG CENTRAL AVE FROM WASHINGTON BLVD TO VERNON AVE INCLUDING PED LIGHTING, NEW BUS STOPS AND STREET FURNITURE, SIDEWALK WIDENING, CROSSWALK ENHANCEMENTS, TREES ETC.	\$4,000
LOS ANGELES	LOCAL HIGHWAY	LA E2299	0	WIDEN HASKELL AVENUE BETWEEN CHASE ST. AND ROSCOE BLVD - SAFETY IMPROVEMENTS.	\$200
LOS ANGELES	LOCAL HIGHWAY	LA E2515	0	WIDEN BUNDY DR. BETWEEN WILSHIRE AND SANTA MONICA BLVD - WIDEN FROM 2 LANES TO 4 LANES.	\$4,250
LOS ANGELES	LOCAL HIGHWAY	LA E2538	0	KOREATOWN PAVILION GARDEN TO ENHANCE THE NORTHEAST CORNER OF NORMANDIE AND OLYMPIC BL. ENHANCE AN EXISTING POCKET PARK AT THE INTERSECTION OLYMPIC AND NORMANDIE/ROLO WITH DECORATIVE CONCRETE PAVING AND IMPROVE STREETSCAPE BY ADDING PEDESTRIAN IMPROVEMENTS SUCH AS STREET FURNITURE, LIGHTING, LANDSCAPING, AND COMMUNITY IDENTIFIERS.	\$250
LOS ANGELES	LOCAL HIGHWAY	LA E2634	0	CONSTRUCTION OF A TRAFFIC SIGNAL AT THE INTERSECTION OF HAMLIN ST. AND CORBIN AVE.	\$125
LOS ANGELES	LOCAL HIGHWAY	LA E2699	0	CONSTRUCTION OF NEW MULTI-USE PATH/TRAIL ALONG RIVER BANK BETWEEN SEPULVEDA BLVD & KESTER AVE INCLUDING ACCESS RAMPS, RETAINING WALLS, LANDSCAPING ETC.	\$574
LOS ANGELES	LOCAL HIGHWAY	LA E2828	0	IMPLEMENT STREETSCAPE IMPROVEMENTS ALONG WILBUR AVE TO ENHANCE TRAFFIC AND PEDESTRIAN SAFETY. PROJECT WILL PROVIDE FOR SIDEWALK IMPROVEMENTS, ADA-COMPLIANT ACCESS RAMPS, AND STREET TREES TO ENHANCE WILBUR AVE AND PROVIDE FOR PEDESTRIAN SAFETY.	\$100
LOS ANGELES	LOCAL HIGHWAY	LA E3157	0	REHABILITATE ADDISON ST BETWEEN KESTER AVE AND LEMONA AVE. PROVIDE ASPHALT CONCRETE RESURFACING ON THE PROPOSED PROJECT LIMITS. WILL NOT ENHANCE TRAFFIC CAPACITY.	\$47
LOS ANGELES	LOCAL HIGHWAY	LA E3201	0	CONSTRUCTION OF A TRAFFIC SIGNAL AT THE INTERSECTION OF OSO AVE. AND VANOWEN ST.	\$125

TABLE 1 FTIP Projects - Continued

County	System	FTIP ID	Route #	Description	Project Cost (\$1,000's)
LOS ANGELES	LOCAL HIGHWAY	LAF3764	0	ITS & INTERSECTION IMPROVEMENTS IN AND NEAR LAX AIRPORT, WHICH MAY INCLUDE RESTRIPING, SIGNAL PHASE CHANGES, AND THE ADDITION OF INTELLIGENT TRANSPORTATION SYSTEM EQUIPMENT.	\$1,250
LOS ANGELES	LOCAL HIGHWAY	LAF141	0	VICTORY BL WIDENING FROM TOPANGA CYN BL TO DE SOTO AV. WIDEN THE SOUTH SIDE OF VICTORY BL FROM TOPANGA CYN BL TO DE SOTO AV TO PROVIDE AN ADDITIONAL EB TRAVEL LANE	\$11,655
LOS ANGELES	LOCAL HIGHWAY	LAF205	0	OLYMPIC BL AND MATEO STREET GOODS MOVEMENT IMP-PHASE II. IMPROVEMENT OF FREEWAY ACCESS BY WIDENING WB OLYMPIC BL BET MATEO ST & SANTA FE AV FOR A RIGHT-TURN LANE, AND NB MATEO ST BET OLYMPIC BL & PORTER ST FOR INCREASED CURB RETURN.	\$4,421
LOS ANGELES	LOCAL HIGHWAY	LAF524	0	SAN FERNANDO RD. BIKE PATH PH. IIIA/IIIB - CONSTRUCTION, RECOMMEND PHASE IIIA-CONSTRUCTION OF A CLASS I BIKE PATH WITHIN METRO OWNED RAIL RIGHT-OF-WAY ALONG SAN FERNANDO RD. BETWEEN BRANFORD ST. AND TUXFORD ST IN CL. BRIDGE. 2 MILE BIKE PATH.	\$12,714
LOS ANGELES	LOCAL HIGHWAY	LAF535	0	BICYCLE WAYFINDING SIGNAGE PROGRAM. WAYFINDING SIGNS TO DIRECT BICYCLISTS, AND EDUCATE MOTORISTS, TO THE LOCATIONS OF DEDICATED BIKE PATHS, LANES AND ROUTES, DESTINATIONS, AND TRANSIT HUBS THROUGHOUT LOS ANGELES.	\$504
LOS ANGELES	LOCAL HIGHWAY	LAF611	0	CESAR CHAVEZ TRANSIT CORRIDOR (110 Fwy TO ALAMEDA). INSTALLATION OF PEDESTRIAN/TRANSIT RIDER AMENITIES INC. BUS STOP GARDENS AT THREE INTERSECTIONS, NEW PEDESTRIAN LIGHTING, STREET TREES IN A LANDSCAPED PARKWAY & WAYFINDING SIGNAGE.	\$2,350
LOS ANGELES	LOCAL HIGHWAY	LAF612	0	CENTURY CITY URBAN DESIGN AND PEDESTRIAN CONNECTION PLAN. PROJECT WILL IMPLEMENT SIDEWALK IMPROVEMENTS, DECORATIVE CROSSWALKS, MEDIAN ISLAND, CURB RAMPS, PEDESTRIAN LIGHTING, SHELTERS, BENCHES, TRASH RECEPTACLES & STREET TREES. THE PHYSICAL IMPROVEMENTS WILL CONSIST OF A MEANDERING PEDESTRIAN WALKWAY, SOLAR-POWERED PEDESTRIAN SCALE LIGHTING, STREET LIGHTING, TRASH RECEPTACLES, BUS BENCHES, (10) BICYCLE RACKS.	\$3,342
LOS ANGELES	LOCAL HIGHWAY	LAF613	0	EXPO LINE STN STREETSCAPE PROJECT-EAST CRENSHAW TO JEFFERSON. DESIGN & CONSTRUCTION OF PEDESTRIAN RELATED STREETSCAPE IMPROVEMENTS WITHIN 1/4 MILE FROM EACH OF 3 LIGHT RAIL STATIONS ALONG EXPOSITION BLVD BETWEEN CRENSHAW & JEFFERSON.	\$3,262
LOS ANGELES	LOCAL HIGHWAY	LAF615	0	EASTSIDE LIGHT RAIL PEDESTRIAN LINKAGE. IMPROVE PEDESTRIAN LINKAGES TO METRO'S GOLD LINE LRT ON 1ST ST BETWEEN SOTO ST TO RIVERA ST AND FRESNO ST TO CONCORD ST. PEDESTRIAN LINKAGE ELEMENTS TO INCLUDE SIDEWALK IMPROVEMENTS, STREET TREES, CROSSWALK ENHANCEMENTS, PEDESTRIAN LIGHTING, AND STREETSCAPE AMENITIES. THE PROJECT'S PURPOSE IS TO PROMOTE AND FACILITATE PEDESTRIAN ACTIVITY AND INCREASE PEDESTRIAN SAFETY LEADING TO METRO'S GOLD LINE EASTSIDE EXTENSION STATIONS.	\$2,990
LOS ANGELES	LOCAL HIGHWAY	LAF617	0	HOLLYWOOD PEDESTRIAN/TRANSIT CROSSROADS PHASE II. DESIGN AND INSTALL PEDESTRIAN AND TRANSIT USER ENHANCEMENTS, EXTENDING THE ORIGINAL HOLLYWOOD PEDESTRIAN/TRANSIT IMPROVEMENT PROJECT TO INCLUDE HIGHLAND AVENUE AND VINE STREET. DISTANCE 0.56 MILES.	\$860
LOS ANGELES	LOCAL HIGHWAY	LAF639	0	FASHION DISTRICT STREETSCAPE PHASE II. STREETSCAPE IMPROVEMENTS ENHANCING THE PEDESTRIAN ENVIRONMENT TO FACILITATE INCREASED PEDESTRIAN USAGE BETWEEN LA FASHION DISTRICT'S CORE AND THE 7TH ST TRANSIT CORRIDOR FOR A DISTANCE OF 1 MILE.	\$1,971
LOS ANGELES	LOCAL HIGHWAY	LAF662	0	SOLANO CANYON-ZANJA MADRE-CHINATOWN-BROADWAY BUS STOP IMPROV. IMPROVE 8 BUS STOPS ALONG BROADWAY-BERNARD ST TO SOLANO AV WITH STREET FURNITURE & LANDSCAPING, INCREASING ACCESSIBILITY, TRANSFERS & TRANSIT USE	\$1,115
LOS ANGELES	LOCAL HIGHWAY	LAF704	0	DOWNTOWN L.A. ALTERNATIVE GREEN TRANSIT MODES TRIAL PROGRAM. OFFER SHARED RIDE-BICYCLE AND NEIGHBORHOOD ELECTRIC VEHICLE TRANSIT SERVICES TO LA CITY HALL AS AN ALTERNATIVE TO OVERCROWDED DASH SERVICE	\$1026
LOS ANGELES	LOCAL HIGHWAY	LAF708	0	HOLLYWOOD INTEGRATED MODAL INFORMATION SYSTEM. INSTALLATION OF ELECTRONIC, DIRECTION AND PARKING AVAILABILITY SIGNS WITH INTERNET CONNECTIVITY TO PROVIDE ADVANCE AND REAL-TIME INFORMATION INTENDED TO INCREASE TRANSIT RIDERSHIP	\$2,708
LOS ANGELES	LOCAL HIGHWAY	LAF725	0	WIFI ON THE GOLD LINE. WIFI INTERNET INSTALLED ON GOLD LINE TRAINS, POLES & STATIONS, EASTSIDE EXTENSION, CHINATOWN & LITTLE TOKYO/ARTS DISTRICTS.	\$1,238
LOS ANGELES	LOCAL HIGHWAY	LAF844	0	ANGELS WALK CRENSHAW. TO PROMOTE PEDESTRIAN ACTIVITY WITHIN THE PROJECT LIMITS WITH A GUIDEBOOK AND 15 ON-STREET INFORMATION MARKERS (HISTORIC STANCHIONS) AT STRATEGIC LOCATIONS.	\$764
LOS ANGELES	LOCAL HIGHWAY	LAF845	0	ANGELS WALK HIGHLAND PARK. TO PROMOTE PEDESTRIAN ACTIVITY WITHIN THE PROJECT LIMITS WITH A GUIDEBOOK AND 15 ON-STREET INFORMATION MARKERS AT STRATEGIC LOCATIONS.	\$784
LOS ANGELES	LOCAL HIGHWAY	LAF846	0	ANGELS WALK NORTH HOLLYWOOD. TO PROMOTE PEDESTRIAN ACTIVITY WITHIN THE PROJECT LIMITS WITH A GUIDEBOOK AND 15 ON-STREET INFORMATION MARKERS AT STRATEGIC LOCATIONS.	\$714
LOS ANGELES	LOCAL HIGHWAY	LAF3142	0	EXPOSITION PARK TRAFFIC CIRCULATION IMPROVEMENTS, WIDEN THE INTERSECTIONS OF VERMONT AVE & MARTIN LUTHER KING, JR. BLVD & FIGUEROA ST & MARTIN LUTHER KING JR BLVD TO PROVIDE EXCLUSIVE RIGHT TURN LANES.	\$4,477

TABLE 1 FTIP Projects - Continued

County	System	FTIP ID	Route #	Description	Project Cost (\$1,000's)
LOS ANGELES	LOCAL HIGHWAY	LAF3144	0	FOOTHILL BLVD AND SIERRA HWY INTERSECTION IMPROVEMENTS. WIDEN FOOTHILL BL TO PROVIDE AN ADDITIONAL N/B THROUGH LANE, RESTRIPE SIERRA HWY TO PROVIDE ADDITIONAL W/B RIGHT TURN LANE, & SIGNALIZE THE INTERSECTION.	\$1,860
LOS ANGELES	LOCAL HIGHWAY	LAF3146	0	HIGHLAND AVENUE WIDENING-ODIN STREET TO FRANKLIN AVENUE. WIDEN THE EXISTING ROADWAY FROM 75 FT TO 87 FT TO ADD ADDITIONAL TURNING TRAFFIC LANE ALONG HIGHLAND AVE & UPGRADE THE HIGHWAY TO MAJOR HIGHWAY STANDARDS.	\$5,804
LOS ANGELES	LOCAL HIGHWAY	LAF3148	0	NORTH MAIN ST. GRADE SEPARATION: CONSTRUCT A NEW GRADE SEPARATION OVER UPRR AND METROLINK & LA RIVER WHILE PRESERVING THE EXISTING HISTORIC N. MAIN ST. BRIDGE. BIKE LANES WILL BE ADDED AT THE SHOULDERS OF THE BRIDGE. OTHER WORK COMPONENTS INCLUDE REALIGNING ALBION STREET AND MODIFYING THE INTERSECTIONS OF NORTH MAIN AND MESNAGER STREET AT THE WEST END.	\$91,280
LOS ANGELES	LOCAL HIGHWAY	LAF3171	0	DE SOTO AVE WIDENING: RONALD REAGAN FWY TO DEVONSHIRE ST.. WIDEN DE SOTO AVE FR SR-118 TO DEVONSHIRE ST TO PROVIDE 3 LANES IN EACH DIRECTION & UNIFORM ROADWAY WIDTH. EXISTING ASPHALT BERMS TO BE REPLACED WITH CURB, GUTTER, & 10' SIDEWALK. SIDEWALK IS 1.42 MILES, 90% OF THE SIDEWALKS ALONG THE PROJECT LIMITS WILL BE NEW.	\$11,536
LOS ANGELES	LOCAL HIGHWAY	LAF3314	0	INTELLIGENT TRANSPORTATION SYSTEM (ITS) COMMUNICATION SYSTEM. UPGRADE AND REPLACE UNDER CAPACITY COMMUNICATION SYSTEM HARDWARE IN ORDER TO PROVIDE A VIABLE AND COST EFFECTIVE COMMUNICATION LINK BETWEEN TRAFFIC CORRIDORS AND THE LA COUNTY IEN.	\$5,493
LOS ANGELES	LOCAL HIGHWAY	LAF3315	0	CITY/COUNTY TRAFFIC MANAGEMENT INTEGRATION PHASE 2 PROJECT. INTEGRATE THE IEN TRAFFIC SIGNAL TIMING DATA AS SECOND LEVEL INPUTS INTO ATCS AND MAKE REVISIONS FROM 2007 CALL APPLICATION TO THIS PROJECT.	\$1673
LOS ANGELES	LOCAL HIGHWAY	LAF3513	0	DESIGN AND CONSTRUCT 3.85 MILE BIKEWAY ALONG FUTURE EXPOSITION LIGHT RAIL CORRIDOR BETWEEN VENICE/ROBERTSON BLVD'S. AND SANTA MONICA CITY LIMITS AT CENTINELA. CLASS I AND CLASS II BIKEWAYS.	\$9,139
LOS ANGELES	LOCAL HIGHWAY	LAF3514	0	DESIGN AND CONSTRUCT 0.28 MILES CLASS I BIKE FACILITY NORTH OF I-10 FROM MOTOR AVE. TO 500 FEET EAST OF DUNLEER DR. (CONTINUOUS BIKEWAY FROM EXPOSITION PARK TO SANTA MONICA BEACH).	\$5,521
LOS ANGELES	LOCAL HIGHWAY	LAF3515	0	SAN FERNANDO RD. BIKE PATH PH. IIB CONSTRUCTION. CONSTRUCT 2.75 MILE CLASS I BIKE PATH WITHIN METRO RIGHT-OF-WAY ALONG SAN FERNANDO RD. BETWEEN TUXFORD ST. AND COHASSET ST. TO COMPLETE 12-MILE BIKEWAY. THE PROJECT IS LOCATED WITHIN THE CITY OF LOS ANGELES. IN THE COMMUNITY OF SUN VALLEY. THE PROJECT CONSISTS OF A CLASS I FACILITY 12 FEET IN WIDTH AND 2.75 MILES IN LENGTH BETWEEN TUXFORD ST. AND COHASSET ST. (BURBANK CITY LIMIT).	\$12,716
LOS ANGELES	LOCAL HIGHWAY	LAF3631	0	WESTLAKE MACARTHUR PARK PEDESTRIAN IMPROVEMENT PROJECT. INSTALL PEDESTRIAN IMPROVEMENTS INCL. PEDESTRIAN LIGHTING, SIDEWALK ENHANCEMENTS, STREET FURNITURE & TREES, ENHANCED CROSSWALKS, & BUS STOP AMENITIES.	\$1674
LOS ANGELES	LOCAL HIGHWAY	LAF3632	0	WESTERN AV BUS STOP & PEDESTRIAN IMPROVEMENT PROJECT. INSTALL PEDESTRIAN AND TRANSIT AMENITIES TO ENHANCE THE PEDESTRIAN ENVIRONMENT ALONG WESTERN AV BTW EXPOSITION BL & I-10 FREEWAY.	\$1,472
LOS ANGELES	LOCAL HIGHWAY	LAF3640	0	LANI - EVERGREEN PARK STREET ENHANCEMENT PROJECT. INCREASE PEDESTRIAN SAFETY AND ACCESS BY PROVIDING IMPROVED CROSSWALKS, NEW BUS SHELTERS AND STREET TREES TO ENHANCE CONNECTIVITY BETWEEN TRANSIT AND AREA LANDMARKS. THE PROPOSED PROJECT IS LOCATED IN THE BOYLE HEIGHTS COMMUNITY OF LOS ANGELES.	\$10,775
LOS ANGELES	LOCAL HIGHWAY	LAF3646	0	ARTS DISTRICT/LITTLE TOKYO GOLD LINE STATION LINKAGES. PEDESTRIAN ENHANCEMENTS INCLUDING SIDEWALK/PATH PAVING, PED LIGHTS, STREET TREES/PLANTING; DISTRICT SIGNAGE; ENTRY ELEMENTS; STREET FURNITURE; CROSSWALK PAVING; AND BIKE PARKING. (10 BIKE RACKS)	\$4,439
LOS ANGELES	LOCAL HIGHWAY	LAF3647	0	MENLO AVE/MLK VERMONT EXPO STATION PEDESTRIAN IMPROVEMENTS. IMPROVE PEDESTRIAN ACCESS TO THE NEW EXPO STATION ON VERMONT AVE BY INSTALLING SIDEWALKS, LANDSCAPING, AND LIGHTING ALONG MENLO AVE AND MLK JR. BLVD. PLUS A MEDIAN ON MLK BLVD.	\$3,302
LOS ANGELES	LOCAL HIGHWAY	LAF3650	0	WESTERN AVE EXPO LINE STATION LINKAGE PROJECT (SOUTH). PROJECT WILL DESIGN AND CONSTRUCT PEDESTRIAN & SAFETY ENHANCEMENTS INTENDED TO INCREASE THE USAGE OF PUBLIC TRANSPORTATION AND CREATE A LINK TO METRO EXPO LR STATION AT WESTERN & EXPOSITION. PROPOSED IMPROVEMENTS INCLUDE SIDEWALK IMPROVEMENTS, SAFETY LIGHTING AT BUS STOPS, STREET FURNITURE, AND ENHANCED CROSSWALKS.	\$858
LOS ANGELES	LOCAL HIGHWAY	LAF3651	0	EASTSIDE LIGHT RAIL PEDESTRIAN LINKAGES, PHASE II. ENHANCE MULTI-MODAL ACCESS TO THE MARIACHI & SOTO GOLD LINE STATIONS. FOCUSING ON 1ST STREET. PEDESTRIAN IMPROVEMENTS TO ENHANCE MULTI-MODAL ACCESS TO THE MARIACHI & SOTO GOLD LINE STATIONS, FOCUSING ON FIRST ST. & INTERSECTING CORRIDORS OF BOYLE, ST. LOUIS, STATE, AND SOTO STREETS (ENCOMPASSING APPROXIMATELY 0.5 MILES ON EACH CROSS STREET). PROJECT ELEMENTS TO INCLUDE NEW PEDESTRIAN CROSSING SIGNALS.	\$3,651
LOS ANGELES	LOCAL HIGHWAY	LAF3653	0	PASADENA AVE PED CONNECTION TO GOLD LINE HERITAGE SQ STATION. THIS PROJECT WILL IMPLEMENT SIDEWALK IMPROVEMENTS, STREET FURNITURE, SAFETY LIGHTING, STREET TREES, AND ENHANCED CROSSWALKS ALONG PASADENA AVE BETWEEN BROADWAY TO FIGUEROA ST. THIS PROJECT WILL IMPROVE PEDESTRIAN CONNECTIVITY TO THE GOLD LINE HERITAGE SQUARE STATION.	\$2,567

TABLE 1 FTIP Projects - Continued

County	System	FTIP ID	Route #	Description	Project Cost (\$1,000's)
LOS ANGELES	LOCAL HIGHWAY	LAF3657	0	BEVERLY BOULEVARD TRANSPORTATION ENHANCEMENTS, PROVIDE TRANSIT-ORIENTED STREETScape IMPROVEMENTS TO INCREASE PED SAFETY & TRANSIT USE ALONG BEVERLY BL, VERMONT, ALVARADO, TOLUCA, TREE ROOT PRUNING, TREE WELLS, ADA ACCESS, LANDSCAPING.	\$1,374
LOS ANGELES	LOCAL HIGHWAY	LAF3721	0	ANGELS WALK SILVERLAKE, PROMOTE PEDESTRIAN ACTIVITY WITHIN THE PROJECT LIMITS WITH A GUIDEBOOK AND 15 ON-STREET INFORMATION MARKERS (HISTORIC STANCHIONS) AT STRATEGIC LOCATIONS.	\$844
LOS ANGELES	LOCAL HIGHWAY	LAF3722	0	ANGELS WALK BOYLE HEIGHTS, PROMOTE PEDESTRIAN ACTIVITY WITHIN THE PROJECT LIMITS WITH A GUIDEBOOK AND 15 ON-STREET INFORMATION MARKERS (HISTORIC STANCHIONS) AT STRATEGIC LOCATIONS.	\$818
LOS ANGELES	LOCAL HIGHWAY	LAF3726	0	FIRST AND LAST MILE TRANSIT CONNECTIVITY OPTIONS, IMPLEMENT A PILOT SHARED FLEET VEHICLE PROGRAM THAT INCLUDES, BIKES, ALTERNATIVE GREEN VEHICLES FOR FIRST & LAST MILES FROM UNION STATION TO AND OTHER DOWNTOWN LOCATIONS.	\$1,641
LOS ANGELES	LOCAL HIGHWAY	LAF3731	0	DOWNTOWN LA INTER-MODAL TRANSIT INFORMATION AND WAYFINDING, INSTALL TRANSIT INFORMATION MONITORS, VARIABLE MESSAGE SIGNS, INTERACTIVE KIOSKS & PARKING AVAILABILITY SIGNAGE ALONG BROADWAY CORRIDOR TO DOLYMPIC.	\$1,612
LOS ANGELES	LOCAL HIGHWAY	LAF5121	0	BALBOA BL WIDENING AT DEVONSHIRE ST. THIS PROJECT WILL IMPROVE THE INTERSECTION OF BALBOA BL AND DEVONSHIRE ST BY WIDENING BALBOA BL BY THREE FEET FOR A DISTANCE OF 0.1 MILE IN BOTH DIRECTIONS. THIS WIDENING WILL ENABLE THE INTERSECTION OF BALBOA BL AND DEVONSHIRE ST TO BE RESTRIPTED AND RECONFIGURED TO ACCOMMODATE DUAL LEFT-TURN LANES IN THE NORTHBOUND AND SOUTHBOUND DIRECTIONS OF BALBOA BL. THE PROJECT INCLUDES CURB AND GUTTER WORK AND MODIFICATIONS TO THE EXISTING SIDEWALK.	\$1,858
LOS ANGELES	LOCAL HIGHWAY	LAF5207	0	ALAMEDA STREET DOWNTOWN LA: GOODS MOVEMENT, PHASE I. THIS PROJECT WILL PROVIDE CONGESTION RELIEF, IMPROVE MOBILITY/REDUCE CONFLICTS, AND IMPROVE SAFETY FOR BOTH AUTOS AND TRUCKS BY PROVIDING INTERSECTION IMPROVEMENTS. PROJECT WILL ALSO REMOVE ABANDONED RAIL LINES, REPAIR PAVEMENT, ADD NEW STREET LIGHTING, AND CONSTRUCT PEDESTRIAN IMPROVEMENTS.	\$7,132
LOS ANGELES	LOCAL HIGHWAY	LAF5317	0	ITS PLATFORM UPGRADES-THIS PROJECT INCLUDES TWO PARTS: COMPUTER NETWORK ARCHITECTURE UPGRADE (CNA) AND COMMUNICATIONS SYSTEM & CENTRAL COMPUTER CORE UPGRADE (CSC). THE CNA WILL INCREASE CAPACITY OF THE AT&T CENTRAL COMPUTER NETWORK. THE CSC INVOLVES UPGRADE OF NEW SOFTWARE COMMUNICATIONS STACKS TO INCREASE CAPABILITY OF EACH COMMUNICATIONS CHANNEL TO TRANSMIT VARIOUS TRAFFIC DATA.	\$2,875
LOS ANGELES	LOCAL HIGHWAY	LAF5518	0	THIS PROJECT IS LOCATED IN THE CITY OF LOS ANGELES IN THE WEST SAN FERNANDO VALLEY, CONSTRUCTION OF A BICYCLE/PEDESTRIAN PATH FROM OWENSMOUTH AV TO MASON AV (1.25 MILES) ALONG THE SOUTH BANK OF THE LA RIVER, INCLUDES UNDERPASSES AT DE SOTO AV AND CANOGA AV// BUSWAY BRIDGES. THE PROJECT WILL INCLUDE LIGHTING, RAILING, STRIPING AND SIGNAGE AND A CONNECTION STRUCTURE TO THE METRO ORANGE LINE BIKEWAY.	\$6,136
LOS ANGELES	LOCAL HIGHWAY	LAF5519	0	THIS PROJECT IS LOCATED IN THE CITY OF LOS ANGELES. CONSTRUCTION OF BICYCLE FRIENDLY STREET TREATMENTS: AT LEAST 100 DIRECTIONAL SIGNS, AT LEAST 500 SHARED LANE MARKINGS, AND BICYCLE DETECTORS AND MARKINGS PROVIDED TO AT LEAST 15 SIGNALIZED INTERSECTIONS. OTHER TREATMENTS WILL INCLUDE TRAFFIC CALMING DEVICES AND DIVERSION, WHICH INCLUDE AT LEAST ONE DIVERTER AND ROUNDABOUT.	\$732
LOS ANGELES	LOCAL HIGHWAY	LAF5525	0	TO DESIGN AND CONSTRUCT CURB-SIDE BICYCLE PARKING (BICYCLE CORRAL) THAT WILL SERVE EACH COUNCIL DISTRICT. THE PROJECT REQUIRES SURFACE MODIFICATIONS TO CURBSIDE PARKING AREAS FOR INSTALLING AT LEAST 150 BIKE RACKS.	\$1,215
LOS ANGELES	LOCAL HIGHWAY	LAF5620	0	EXPO LINE - TRANSIT/PEDESTRIAN LINKAGES - WEST: IT WILL FUND PEDESTRIAN IMPROVEMENTS BY INSTALLING DECORATIVE SIDEWALKS, STREET TREES, NEW AND UPGRADED ACCESS RAMPS, TRASH RECEPTACLES, BENCHES, BICYCLE RACKS, PEDESTRIAN LIGHTING, AND DECORATIVE CROSSWALKS. FUNDS ARE REQUESTED FOR DESIGN AND CONSTRUCTION COSTS. PEDESTRIAN LINKAGES 2.5 MILES.	\$2,890
LOS ANGELES	LOCAL HIGHWAY	LAF5624	0	WASHINGTON BLVD PEDESTRIAN TRANSIT ACCESS (HOOPER/ALAMEDA) II, LOCATED ON WASHINGTON BL BETWEEN HOOPER AV AND ALAMEDA ST AND ON LONG BEACH AV BETWEEN WASHINGTON BL AND 20TH ST, PEDESTRIAN IMPROVEMENTS, PEDESTRIAN LIGHTING, CROSSWALK ENHANCEMENTS, CURB EXTENSIONS, NEW RAILROAD CROSSING SIGNALS, AND NEW ACCESS TO THE STATION FROM THE SOUTH, DISTANCE 0.99 MILES.	\$2,296
LOS ANGELES	LOCAL HIGHWAY	LAF5632	0	HOLLYWOOD/WESTERN STREETSCAPE PUBLIC AND PEDESTRIAN IMPROVEMENTS ON HOLLYWOOD BLVD BETWEEN GOWER ST AND WESTERN AV AND ON WESTERN AV BETWEEN HOLLYWOOD BL AND CARLTON WAY. INSTALLATION OF NEW SIDEWALK PAVING, CURB RAMPS, BUS SAFETY LIGHTING, TRASH RECEPTACLES, BENCHES, BIKE RACKS, STREET TREES, LANDSCAPING, CURB EXTENSIONS, PUBLIC ART, AND DECORATIVE CROSSWALKS.	\$3,923
LOS ANGELES	LOCAL HIGHWAY	LAF5707	0	ANGELS WALK CENTRAL AVENUE. THIS PROJECT WILL PROVIDE 15 ON-STREET INFORMATION MARKERS (HISTORIC STANCHIONS), GUIDE BOOKS AND DIGITAL ACCESS ON THE INTERNET TO GUIDE PEDESTRIANS AND TRANSIT USERS IN A SIGNIFICANT SEGMENT OF CENTRAL AV, INFORMING THEM OF THE HISTORY AND CULTURE OF THE AREA. IT WILL ALSO LINK THE PEDESTRIAN TO DOWNTOWN VIA CONNECTIONS TO PUBLIC TRANSIT OPTIONS ALONG THIS ANGELS WALK ROUTE.	\$858

TABLE 1 FTIP Projects - Continued

County	System	FTIP ID	Route #	Description	Project Cost (\$1,000's)
LOS ANGELES	LOCAL HIGHWAY	LA05710	0	EXPERIENCE LA HISTORIC CULTURAL NEIGHBORHOOD CONNECTIONS. INSTALLATION OF 22 KIOSKS AT TRANSIT HUBS IN ACTIVITY CENTERS THROUGHOUT THE CITY OF LOS ANGELES. BY UTILIZING SMART TECHNOLOGY TRANSIT USERS WILL BE ABLE TO USE CELL PHONES OR THE KIOSK TO FIND INFORMATION THAT WILL MAKE THE TRANSFER MORE SEAMLESS TO THEIR FINAL DESTINATION.	\$1,705
LOS ANGELES	LOCAL HIGHWAY	LA07109	0	SOTO STREET WIDENING FROM MULTNOMAH STREET TO MISSION ROAD: (1) WIDENS SOTO ST BETWEEN MULTNOMAH ST AND NORTH MISSION RD (0.6 MILE) FROM A BI-DIRECTIONAL 1-LANE ROADWAY TO 2-LANE ROADWAY IN EACH DIRECTION. (2) WIDENS EXISTING SIDEWALKS FROM 4 FT TO 8 FT FOR WHEELCHAIR ACCESSIBILITY. (3) CONSTRUCTS CLASS II BIKE LANE IN BOTH DIRECTIONS, PEDESTRIAN LIGHTING, A NEW STRIPED MEDIAN, AND SHOULDERS ON BOTH SIDES OF THE STREET.	\$3,511,880
LOS ANGELES	LOCAL HIGHWAY	LA07125	0	SHERMAN WAY WIDENING BETWEEN WHITSETT AVENUE TO HOLLYWOOD FREEWAY: (1) WIDEN A SOUTH SIDE OF SHERMAN WAY BY APPROX 20 FT TO PROVIDE A THROUGH AND DEDICATED RIGHT-TURN ONLY LANE ONTO THE HOLLYWOOD Fwy SOUTHBOUND ON-RAMP. (2) INSTALLS PEDESTRIAN FACILITIES AND LANDSCAPING. (3) WIDENS THE OUTSIDE CURB LANE BY 6 FT TO ACCOMMODATE SAFER BIKE TRAVEL.	\$1,499
LOS ANGELES	LOCAL HIGHWAY	LA07131	0	CENTURY BOULEVARD EXTENSION BETWEEN GRAPE STREET AND ALAMEDA STREET: EXTENDS CENTURY BL BY APPROX 2,600 FT FROM GRAPTE ST TO ALAMEDA ST WITH A 2 LANE ROADWAY, SIDEWALKS ON BOTH SIDES, CLASS II BIKE LANE, PED/BIKE FACILITIES, AND LANDSCAPING.	\$11,129
LOS ANGELES	LOCAL HIGHWAY	LA07205	0	ALAMEDA STREET WIDENING FROM ANAHEIM STREET TO 300 FT SOUTH OF PCH: (1) WIDENS ALAMEDA ST BETWEEN ANAHEIM ST AND 300 FT SOUTH OF PACIFIC COAST HIGHWAY FROM 2 TO 3 LANES IN EACH DIRECTION FOR CONGESTION RELIEF AND IMPROVE GOODS MOVEMENT MOBILITY.	\$9,709
LOS ANGELES	LOCAL HIGHWAY	LA07207	0	ANAHEIM STREET WIDENING - FARRAGUT AVENUE TO DOMINGUEZ CHANNEL: WIDEN ANAHEIM ST BETWEEN FARRAGUT AV AND DOMINGUEZ CHANNEL FROM 2 TO 3 LANES IN EACH DIRECTION FOR CONGESTION RELIEF AND IMPROVE GOODS MOVEMENT MOBILITY. THIS UPGRADES THE ARTERIAL TO MAJOR HIGHWAY STANDARDS.	\$6,566
LOS ANGELES	LOCAL HIGHWAY	LA07628	0	WATT'S STREETSCAPE IMPROVEMENTS PHASE 2: INSTALLS ADA RAMPS, LANDSCAPING STREET TREES, STREET FURNITURE, PED LIGHTING, CROSSWALK ENHANCEMENTS, CURB EXTENSIONS, SHARROWS, AND PED & BIKE WAYFINDING SIGNAGE.	\$836
LOS ANGELES	LOCAL HIGHWAY	LA07708	0	INTERACTIVE BICYCLE BOARD DEMO PROJECT: INSTALLS 12 INTERACTIVE DISPLAY SCREENS AND 96 BICYCLE COUNTERS TO ENCOURAGE GREATER USE OF BICYCLES AND REDUCING VEHICLE MILES TRAVELED.	\$684
LOS ANGELES	LOCAL HIGHWAY	LA07814	0	LADOT STREETS FOR PEOPLE: TRANSIT CORRIDOR PARKLETS AND PLAZAS: INSTALLS 12 PARKLETS AND 3 PLAZAS. THE LIMITS OF THE PARKLETS WILL BE EQUAL TO TWO CURBSIDE PARKING SPACES (APPRX. 40X6). THE PLAZA LIMIT VARIES RANGING FROM 2,000 TO 6,000 SF.	\$546
LOS ANGELES	LOCAL HIGHWAY	LA061042	0	AVIATION BL AT MARINE AV DUAL SB TO EB LEFT TURN LANES: THIS PROJECT WOULD WIDEN THE WEST SIDE OF AVIATION BL NORTH OF MARINE AV TO PROVIDE DUAL LEFT-TURN LANES IN THE SB TO EB DIRECTION.	\$1,500
LOS ANGELES	LOCAL HIGHWAY	LA061043	0	AVIATION BL AT ARTESIA BL SB TO WB RIGHT-TURN LANE: THIS PROJECT WOULD WIDEN THE WEST SIDE OF AVIATION BLVD. NORTH OF ARTESIA BLVD. TO PROVIDE A SB TO WB RIGHT-TURN LANE.	\$1,500
LOS ANGELES	LOCAL HIGHWAY	LA061044	0	SEPULVEDA BL AT MANHATTAN BEACH BL, DUAL LEFT-TURN LANES, WB TO SB, NB TO WB & EB TO NB.	\$980
LOS ANGELES	LOCAL HIGHWAY	LA06820	0	SEPULVEDA BOULEVARD (SR-1) AT MARINE AVENUE DUAL WESTBOUND TO SOUTHBOUND LEFT-TURN LANES: THIS PROJECT WILL WIDEN THE EXISTING ROADWAY ALONG MARINE AVENUE AT SEPULVEDA BLVD (SR-1) TO PROVIDE AN ADDITIONAL WESTBOUND LEFT-TURN LANE.	\$335
LOS ANGELES	LOCAL HIGHWAY	LA01696	0	RECONSTRUCTION OF THE STRAND STAIRWAYS IN THE CITY OF MANHATTAN BEACH TO IMPROVE BEACH ACCESS AND ACCOMMODATE INCREASED PEDESTRIAN TRAFFIC. TOLL CREDITS - LOCAL AND STATE HWY OF \$320 WILL BE USED TO MATCH FYS FEDERAL FUNDS FOR THE CON PHASE	\$1,760
LOS ANGELES	LOCAL HIGHWAY	LA06861	0	HUNTINGTON DRIVE PHASE II FROM MAGNOLIA TO SHAMROCK - CONSTRUCTION ACTIVITIES WILL REMOVE/ REPLACE DAMAGED CONCRETE PANELS, REPLACE CURBING IN THE MEDIAN ISLAND, UPGRADE HANDICAP ACCESS RAMPS, UPGRADE PEDESTRIAN COUNTERS ON TRAFFIC SIGNALS, RE-STRIPE AND INSTALL PAVEMENT MARKERS, REPLACE STREET SIGNS WITH NEW REGULATORY SIGNS, CRACK SEAL AND JOINT REPAIRS AND INSTALL BUS TURNOUTS. (APPROX 0.8 MI). UTILIZING TOLL CREDITS TO MATCH STPL AND RSTP.	\$2,028
LOS ANGELES	LOCAL HIGHWAY	LA061181	0	2.86 MILES CLASS III BIKE PATH: 196 MILES CLASS II BIKE PATH CONVERTED FROM ON-STREET PARKING AND MEDIAN. CLASS III BIKE PATH: MONTEREY PASS RD/GARVEY AVE (2.86 MILE). CLASS II BIKE PATH: CESAR CHAVEZ/RIGGIN (1.96 MILE)	\$420
LOS ANGELES	LOCAL HIGHWAY	LA00106	0	PEDESTRIAN/BICYCLE FACILITIES: LANDSCAPE AND ARTWORK ENHANCEMENTS ADJACENT TO THE I-5/SR 10 AND THE LOS ANGELES RIVER.	\$5,038
LOS ANGELES	LOCAL HIGHWAY	LA00458	0	PROJECT WILL PROVIDE FOR THE CONSTRUCTION OF A 3.25 MILE BIKEWAY ALONG THE RESTORED BANKS OF THE PACOIMA WASH.	\$983

TABLE 1 FTIP Projects - Continued

County	System	FTIP ID	Route #	Description	Project Cost (\$1,000's)
LOS ANGELES	LOCAL HIGHWAY	LA0G1063	0	STUDEBAKER ROAD AT ROSECRANS AVENUE INTERSECTION IMPROVEMENTS - PROVIDE ADDITIONAL NB & SB LEFT TURN LANES ON STUDEBAKER, ADDITIONAL EB & WB LEFT TURN LANES ON ROSECRANS, & EB & SB RIGHT TURN OVERLAP PHASING, INCREASE NB LEFT TURN STORAGE ON STUDEBAKER & WB LEFT TURN STORAGE ON ROSECRANS, WIDEN 2' ON NORTH SIDE OF ROSECRANS EAST OF STUDEBAKER & SOUTH SIDE OF ROSECRANS WEST OF STUDEBAKER WITHIN EX. ROW, MODIFY EXISTING MEDIUM ISLAND ON ROSECRANS, MODIFY TRAFFIC SIGNALS, & RELOCATE STREET LIGHTS	\$1,670
LOS ANGELES	LOCAL HIGHWAY	LA0G1064	0	BLOOMFIELD AVENUE AT IMPERIAL HIGHWAY INTERSECTION IMPROVEMENTS - PROVIDE ADDITIONAL WB LEFT TURN LANE ON IMPERIAL, PROTECTED SB LEFT TURN PHASING, AND NB RIGHT TURN OVERLAP PHASING, INCREASE WB & EB LEFT TURN STORAGE ON IMPERIAL AND NB & SB LEFT TURN STORAGE ON BLOOMFIELD, WIDEN 1' ON NORTH SIDE OF IMPERIAL EAST OF BLOOMFIELD WITHIN EXISTING ROW, MODIFY EXISTING MEDIUM ISLAND, MODIFY TRAFFIC SIGNAL, AND RELOCATE STREET LIGHTS	\$920
LOS ANGELES	LOCAL HIGHWAY	LA0G1065	0	PIONEER BOULEVARD AT IMPERIAL HIGHWAY INTERSECTION IMPROVEMENTS - PROVIDE ADDITIONAL EB LEFT TURN LANE ON IMPERIAL AND SB & WB RIGHT TURN OVERLAP PHASING, ACQUIRE 2' ROW & WIDEN 5' ON SOUTH SIDE OF IMPERIAL WEST OF PIONEER WITHIN PROPOSED ROW, MODIFY/REMOVE EXISTING MEDIUM ISLAND, MODIFY TRAFFIC SIGNAL, AND RELOCATE STREET LIGHTS	\$1,510
LOS ANGELES	LOCAL HIGHWAY	LA0G1066	0	STUDEBAKER ROAD AT ALONDRA ROAD INTERSECTION IMPROVEMENTS - PROVIDE ADDITIONAL SB LEFT TURN LANE ON STUDEBAKER & EB RIGHT TURN OVERLAP PHASING, INCREASE NB LEFT TURN STORAGE ON STUDEBAKER, MODIFY EXISTING MEDIUM ISLAND ON STUDEBAKER, MODIFY TRAFFIC SIGNAL, AND RELOCATE STREET LIGHTS	\$480
LOS ANGELES	LOCAL HIGHWAY	LAF1219	0	THE PROJECT WILL REPLACE BRIDGE NO. 53C1984 ON FIRESTONE BOULEVARD OVER THE SAN GABRIEL RIVER, THE REPLACEMENT BRIDGE WILL BE NON-CAPACITY ENHANCING AND PROVIDE 6-TRAFFIC LANES, A 10-FOOT MEDIAN, 8-FOOT BIKE LANES AND 8-FOOT SIDEWALKS, AND WILL IMPROVE TRAFFIC SAFETY BETWEEN NORWALK AND DOWNEY.	\$4,331
LOS ANGELES	LOCAL HIGHWAY	LA0D145B	0	TERRA SUBIDA WIDENING FROM AVENUE S TO AVENUE RAYBURN RD. - FROM 2 TO 4 LANES; WITH TRAFFIC SIGNALS, STREETLIGHTS, RAISED MEDIANS, DRAINAGE IMPROVEMENTS AND PEDESTRIAN IMPROVEMENTS. SPLIT FROM LA0D145.	\$6,900
LOS ANGELES	LOCAL HIGHWAY	LA0G1134	0	DEVELOPMENT OF ACTIVE TRANSPORTATION PROGRAM PLAN THAT INCLUDES SUBCOMPONENTS SUCH AS COMPLETE STREETS, PEDESTRIAN, BICYCLE, TRAILS, SAFE ROUTES TO SCHOOL AND WILL REPLACE THE EXISTING BICYCLE TRANSPORTATION PLAN (BTP)	\$595
LOS ANGELES	LOCAL HIGHWAY	LA981102	0	AVENUE S RAILROAD GRADE SEPARATION (OVERPASS/UNDERPASS) OF METROLINK RR TRACKS, WEST OF SIERRA HIGHWAY - 6 LANES. INCLUDES GRADE SEPARATION OF SIERRA HIGHWAY AND APPLICABLE RAMPING; NO NEW TRAVEL LANES ADDED.	\$56,800
LOS ANGELES	LOCAL HIGHWAY	LAF1104	0	RANCHO VISTA BLVD (RVB) GRADE SEPARATION AT SIERRA HWY/JPRR/METROLINK RR CROSSING AND APPLICABLE CONNECTOR RAMPS/ROADS AND AUXILIARY ROADS AND IMPROVEMENTS: PHASE 1-CONSTRUCT NEW 2 LANE ROAD - 4TH STREET EAST FROM 3RD STREET EAST TO TECHNOLOGY DRIVE, WIDENING TECHNOLOGY DRIVE (P-8) FROM DIVISION STREET TO SIERRA HWY (4-6 LANES), ALSO SIGNALIZED INTERSECTIONS, RIGHT/LEFT TURN POCKETS, BIKE AND PEDESTRIAN LANES (APPROX. 1.5 MI), PAVEMENT TRANSITIONS, TRAFFIC STRIPING, AND DRAINAGE IMPROVEMENTS.	\$5,665
LOS ANGELES	LOCAL HIGHWAY	LAF1104B	0	PHASE 2-CONSTRUCT A RAILROAD GRADE SEPARATION OF RANCHO VISTA BOULEVARD AT BOTH SIERRA HIGHWAY AND THE DOUBLE-TRACK AT-GRADE CROSSING OF THE SOUTHERN CALIFORNIA REGIONAL RAIL AUTHORITY (SCRRA) METRO-LINK AND UNION PACIFIC RAILROAD (UPRR) TRACKS. THE PROJECT EXTENDS EASTERLY ON RANCHO VISTA BOULEVARD FROM FAIRWAY DRIVE TO 10TH STREET EAST AND SOUTHERLY ON SIERRA HIGHWAY FROM APPROXIMATELY 400 FEET NORTH OF EAST AVENUE 0-8 TO AVENUE P-8	\$58,400
LOS ANGELES	LOCAL HIGHWAY	LAF1300	0	NORTH COUNTY TRAFFIC FORUM ITS EXPANSION, MULTI-JURISDICTIONAL PROJECT WILL UPGRADE CENTRAL TOC SOFTWARE AND SIGNAL CONTROLLERS; CONNECT TO LA COUNTY IEN; AND ADD TRAFFIC SIGNALS/CORRIDORS TO EXISTING INTERCONNECT SYSTEM. (4 SIGNALS)	\$11,292
LOS ANGELES	LOCAL HIGHWAY	LAF3107	0	AVENUE S WIDENING PHASE II, AVENUE S WIDENING PHASE II PROJECT PROVIDES A 6 LANE ROADWAY, SIDEWALK, CURB AND GUTTER, CLASS 1 BIKEWAY, TRAFFIC SIGNALS, AND ENHANCEMENTS. THE PROJECT IS SITUATED IN THE HEART OF THE CITY OF PALMDALE IN THE NORTHERN LOS ANGELES COUNTY. THE PROJECT SPANS ALONG AVENUE S, A MAJOR ARTERIAL THAT HAS BEEN IDENTIFIED AS A SIGNIFICANT ARTERIAL BY METRO AS PART OF THE LOS ANGELES COUNTY WIDE SIGNIFICANT ARTERIAL NETWORK. (APOX. 1.5 MI)	\$11,023
LOS ANGELES	LOCAL HIGHWAY	LAF1721	0	RANCHO VISTA BOULEVARD WIDENING : WIDENS TWO SEGMENTS OF RANCHO VISTA BLVD (TOTAL 1.4 MILES) BETWEEN 23RD ST W AND 15TH ST W (0.9 MILE) AND BETWEEN ARNIE QUINONES PARK AND WEST AV N (0.5 MILES), TO ACCOMMODATE 3 CONTINUOUS LANES WITHOUT GAPS OR BOTTLENECKS, 10-FT SIDEWALK, AND 5-FT CLASS III BIKE ROUTE IN EACH DIRECTION.	\$7,500
LOS ANGELES	LOCAL HIGHWAY	LA0G1147	0	GARFIELD AVENUE IMPROVEMENTS FROM 70TH STREET TO HOWERY STREET - WIDEN STREET TO 4 FEET FOR 2 MILES TO ACCOMMODATE A THIRD LANE IN EACH DIRECTION REQUIRING PARTIAL TAKES FROM 2 PARCELS, ADD MEDIANS, NARROW EXISTING MEDIANS, ADD SECOND LEFT TURN LANE IN ALL DIRECTIONS AT TWO INTERSECTIONS, ROSECRANS AVE. AND ALONDRA BLVD., RESURFACE STREET, CONCRETE INTERSECTIONS, TRAFFIC SIGNAL IMPROVEMENTS, STREET LIGHTS, UNDERGROUND UTILITIES, "GREEN STREET" IMPROVEMENTS, AND STORMWATER AND WATERSHED BMPS.	\$4,150

TABLE 1 FTIP Projects - Continued

County	System	FTIP ID	Route #	Description	Project Cost (\$1,000's)
LOS ANGELES	LOCAL HIGHWAY	LA990360	0	LA LOMA BRIDGE CONSTRUCTION (TEA21-#1208) THE LENGTH OF THE PROJECT IS 379 FT. RECONSTRUCT THE ONE LANE IN EACH DIRECTION. BRIDGE NO. 53C0759; LA LOMA RD, OVER ARROYO SECO CHANNEL, 0.8 MI S. Foothill Freeway.	\$14,981
LOS ANGELES	LOCAL HIGHWAY	LAF3790	0	THE PASADENA ITS INTEGRATES 2 COMPONENTS; TRAFFIC SIGNAL COMMUNICATION AND CONTRL, AND PUBLIC PARKING AVAILABILITY INFO. SAFETEA-LU PRJ #3790	\$2,754
LOS ANGELES	LOCAL HIGHWAY	LAF3301	0	METRO GOLD LINE AT-GRADE CROSSING MOBILITY ENHANCEMENTS. DEPLOYMENT OF ITS AT SIGNALIZED INTERSECTIONS ADJACENT TO METRO GOLD LINE AT-GRADE CROSSINGS TO PROVIDE ADAPTIVE TRAFFIC SIGNAL CONTROL TO IMPROVE MOBILITY & ENHANCE SAFETY. PROJECT INCLUDES 14 INTERSECTIONS.	\$1,695
LOS ANGELES	LOCAL HIGHWAY	LAF3302	0	INTELLIGENT TRANSPORTATION SYSTEM (ITS) PHASE III (SIGNAL SYNCHRONIZATION PROJECT 3+ SIGNALS). COMPLETE THE MAIN COMMUNICATION INFRASTRUCTURE SYSTEM OF THE ITS COMMUNICATION MASTER PLAN BY CLOSING ALL GAPS IN THE EXISTING FIBER COMMUNICATION NETWORK. AS STATED IN THE PROJECT DESCRIPTION, THIS PROJECT TARGETS CRITICAL EXISTING GAPS WITHIN THE CITY'S ITS FIBER MASTER PLAN.	\$5,294
LOS ANGELES	LOCAL HIGHWAY	LAF3603	0	EAST COLORADO BOULEVARD PEDESTRIAN IMPROVEMENTS (PHASE 2). INSTALL PED-SCALE STREET LIGHTS, DECORATIVE CROSSWALKS, BUS BENCHES & TRASH RECEPTACLES ON A REGIONALLY SIGNIFICANT STREET TO INCREASE LIVABILITY, SAFETY & ENHANCE PED MOVEMENT. EAST COLORADO BOULEVARD BETWEEN HILL AVENUE AND ALLEN AVENUE IN THE CITY OF PASADENA. (0.46 MILES)	\$754
LOS ANGELES	LOCAL HIGHWAY	LAF3702	0	FOLD-N-GO PASADENA - FOLDING BICYCLE DEMONSTRATION PROGRAM. PROVIDE INCENTIVE TO TRANSIT RIDERS TOWARD THE PURCHASE OF COLLAPSIBLE BIKES - APPROX. 1000 TO USE IN CONJUNCTION WITH BUS & RAIL SYSTEMS.	\$325
LOS ANGELES	LOCAL HIGHWAY	LAF3709	0	ZERO EMISSION VEHICLE CHARGING STATIONS. INSTALL 43 ELECTRIC VEHICLE CHARGING STATIONS FOR USE BY ELECTRIC VEHICLES USING AVAILABLE TECHNOLOGY. THE CHARGERS WILL BE INSTALLED AT EXISTING AND NEW LOCATIONS TO CREATE A CITY-WIDE CHARGING NETWORK. THE NETWORK WILL REDUCE VEHICLE MILES TRAVELLED BY PROVIDING CHARGING AT LIGHT RAIL STATIONS AND EMPLOYMENT DESTINATION POINTS.	\$717
LOS ANGELES	LOCAL HIGHWAY	LAF3710	0	PASADENA'S WAYFINDING SYSTEM. IMPLEMENT WAYFINDING SYSTEM INCLUDING TRANSIT INFORMATION AND CONNECTIVITY TO ADJACENT DESTINATIONS AT TRANSIT STOPS AND PARKING LOTS.	\$2,198
LOS ANGELES	LOCAL HIGHWAY	LAF5305	0	MOBILITY CORRIDORS - ROSE BOWL ACCESS SYSTEMS ALONG COLORADO BL, LINCOLN BL AND ORANGE GROVE BL IN THE CITY OF PASADENA. SIGNAL SYNCHRONIZATION OF 28 INTERSECTIONS - UPGRADED AND SIGNAL SYNC. PROJECT IMPROVEMENTS INCLUDE NEW 332-TYPE TRAFFIC SIGNAL CABINETS, ADVANCED TYPE 2070 TRAFFIC-SIGNAL CONTROLLERS, NEW VEHICULAR VIDEO-DETECTION SYSTEMS AND ADVANCED COMMUNICATION SYSTEMS (FIBER OPTIC CABLE AND COMMUNICATION DEVICES NECESSARY) TO ALLOW FOR CONNECTIVITY TO THE CITY'S TMC.	\$1623
LOS ANGELES	LOCAL HIGHWAY	LAF3717	0	PASADENA AREA RAPID TRANSIT SYSTEM TSP - DESIGNS AND INSTALLS TRANSIT SIGNAL PRIORITY EQUIPMENTS FOR 23 PASADENA AREA RAPID TRANSIT SYSTEM (ARTS) BUSES AND 42 INTERSECTIONS. ENHANCEMENTS INCLUDE INSTALLATION OF TRAFFIC SIGNAL CONTROLLERS AND CABINETS, AND CLOSED CIRCUIT TELEVISION CAMERAS (CCTV).	\$1,448
LOS ANGELES	LOCAL HIGHWAY	LAF7318	0	ADAPTIVE TRAFFIC CONTROL NETWORK - PHASE II - INSTALLS ADAPTIVE TRAFFIC CONTROL CAPABILITIES ALONG CALIFORNIA BL BETWEEN ST. JOHN AV AND LAKE AV, DEL MAR BL BETWEEN ST. JOHN AV TO OAK KNOLL AV, ARROYO PARKWAY BETWEEN UNION ST TO FILLMORE ST, AND FOOTHILL BL BETWEEN SIERRA MADRE BL TO MICHILINDA AV. ENHANCEMENTS INCLUDE CABINET AND CONTROLLER UPGRADES, ADAPTIVE TRAFFIC CONTROL HARDWARE & SOFTWARE INSTALLATION, AND COMMUNICATION HARDWARE TO CONNECT TO THE CITY'S FIBER OPTICS INFRASTRUCTURE.	\$2,072
LOS ANGELES	LOCAL HIGHWAY	LA061105	0	BRIDGE NO. 53C0057 - TELEGRAPH ROAD OVER SAN GABRIEL RIVER BRIDGE; 1. DEMOLISH EXISTING BRIDGE WITH FOUR LANES. 2. CONSTRUCT, TWO PARALLEL, 3-LANE STRUCTURES W/ CIP/PS BOX GIRDERS.	\$175,456
LOS ANGELES	LOCAL HIGHWAY	LA061106	0	BRIDGE NO. 53C0471 - WASHINGTON BOULEVARD OVER RIO HONDO RIVER BRIDGE - REPLACING EXISTING 6-LANE BRIDGE WITH AN 8-LANE BRIDGE INCREASING CAPACITY. UPTO ENVIRONMENTAL PHASE	\$198,864
LOS ANGELES	LOCAL HIGHWAY	LA06942	0	ROSEMEAD BOULEVARD AT WHITTIER BOULEVARD INTERSECTION IMPROVEMENTS - PROVIDE NORTHBOUND RIGHT TURN POCKET AND ADDITIONAL SOUTHBOUND LEFT TURN LANE ALONG ROSEMEAD BL. AND INCREASE EASTBOUND AND WESTBOUND LEFT TURN STORAGE ALONG WHITTIER BL.	\$600
LOS ANGELES	LOCAL HIGHWAY	LA06943	0	ROSEMEAD BOULEVARD AT WASHINGTON BOULEVARD INTERSECTION IMPROVEMENTS - MODIFY NORTHBOUND AND SOUTHBOUND RIGHT TURN POCKETS INTO SHARED THRU/RIGHT TURN LANE ALONG ROSEMEAD BL.	\$40
LOS ANGELES	LOCAL HIGHWAY	LA06944	0	ROSEMEAD BOULEVARD AT SLAUSON AVENUE INTERSECTION IMPROVEMENTS - PROVIDE ADDITIONAL NORTHBOUND AND SOUTHBOUND LANE ALONG ROSEMEAD BL. THRU INTERSECTION, INCREASE SOUTHBOUND LEFT TURN STORAGE ALONG ROSEMEAD BL., AND PROVIDE ADDITIONAL WESTBOUND LEFT TURN LANE ALONG SLAUSON AVE.	\$1,770

TABLE 1 FTIP Projects - Continued

County	System	FTIP ID	Route #	Description	Project Cost (\$1,000's)
LOS ANGELES	LOCAL HIGHWAY	LA06945	0	INTERSECTION IMPROVEMENT - ROSEMEAD BOULEVARD AT BEVERLY BOULEVARD - PROVIDE SOUTHBOUND RIGHT TURN POCKET, DUAL RIGHT TURN LANES WESTBOUND WITH CLOSURE OF LINDELL AVE, ADDITIONAL NORTHBOUND LEFT TURN LANE, ADDITIONAL NON-CAPACITY ENHANCING SOUTHBOUND & NORTHBOUND THRU LANES, OVERLAP PHASING FOR SOUTHBOUND RIGHT TURN ONTO BEVERLY BL, AND RESTRICT PEAK HOUR PARKING ALONG WEST SIDE OF ROSEMEAD BL. RIGHT OF WAY IS REQUIRED, 22 FEET ON NORTH SIDE OF BEVERLY BL FROM LINDELL AVE TO ROSEMEAD BL.	\$4,040
LOS ANGELES	LOCAL HIGHWAY	LA06135	0	DESIGN AND CONSTRUCT 1/4.5 MILE OF NEW BIKEWAYS AND IMPROVE PEDESTRIAN SAFETY THROUGH CROSSING IMPROVEMENTS AT EIGHT MAJOR INTERSECTIONS. BIKE IMPROVEMENTS INCLUDE 3.8 MILES OF CLASS II BUFFERED BIKE LANES, 2.9 MILES OF CLASS III BIKE LANES, AND 7.8 MILES OF CLASS III BIKE ROUTES.	\$2,270
LOS ANGELES	LOCAL HIGHWAY	LA00390	0	AT I-110 NB AT JOHN S GIBSON BLVD NB RAMPS & NB SR-47/I-110 CONNECTOR. WIDEN SB 47 TO NB 110 CONNECTOR FROM 11 TO 2 LNS BEGIN AT SB 47 PM 072 (STATION 535+00) JUST W OF FRONT ST ON-RAMP. ADD THROUGH LN CONTINUES ON NB 110 & ENDS JUST N OF THE J S GIBSON OFF-RAMP. WIDEN NB 110/J S GIBSON ON-RAMP TO IMPROVE ACCESS TO FWY & INTERSECTION OF J S GIBSON/110 NB RAMPS W/ IMPROVED TURN RADIUS & RE-STRIPING	\$34,733
LOS ANGELES	LOCAL HIGHWAY	LA0F030	0	PROJECT WILL IMPROVE FLOW OF TRAFFIC FROM I-110 FWY ON/OFF-RAMPS AT C STREET BY CONSOLIDATING TWO CLOSELY SPACED INTERSECTIONS INTO ONE.	\$23,980
LOS ANGELES	LOCAL HIGHWAY	LA06864	0	POLA CARGO TRANSPORTATION IMPROVEMENTS - EMISSION REDUCTION (CTIER) PROGRAM - PHASE 1. WEST OF PIER A STREET AND SOUTH OF WATER STREET IN THE CITY OF WILMINGTON, WITHIN THE TRAPAC CONTAINER TERMINAL AT BERTHS 144-145. PROJECT CONSISTS OF 21 OF BACKLAND IMPROVEMENTS, INCLUDING GRADING, PAVING, STORM DRAIN, SUMP, RAIL, REFER RACKS, TELECOMMUNICATIONS, ELECTRICAL, LIGHTING AND FIRE PROTECTION SYSTEMS, UTILITY RELOCATIONS, FENCING, GATES AND STRIPING.	\$26,695
LOS ANGELES	LOCAL HIGHWAY	LA06865	0	POLA CARGO TRANSPORTATION IMPROVEMENTS - EMISSION REDUCTION (CTIER) PROGRAM - PHASE 2. BERTHS 142-143 BACKLAND WILL CONSTRUCT 72 ACRES OF BACKLAND IMPROVEMENTS, INCLUDING GRADING, PAVING, STORM DRAIN AND SUMP, RAIL, REFER RACKS, TELECOMMUNICATION SYSTEM, ELECTRICAL AND LIGHTING SYSTEM, FIRE PROTECTION SYSTEM, UTILITY RELOCATIONS, FENCING AND STRIPING.	\$143,000
LOS ANGELES	LOCAL HIGHWAY	LA06866	0	ALAMEDA CORRIDOR WEST TERMINUS INTERMODAL RAIL YARD WEST BASIN RAIL YARD (TCIF #32) EXTENSION. BERTHS 142-147 INTERMODAL CONTAINER TRANSFER FACILITY WILL CONSTRUCT A STUB-ENDED RAIL YARD WITH 8 WORKING TRACKS, A 123 FOOT GAUGE RAIL MOUNTED GANTRY CRANE INFRASTRUCTURE, ACCESS ROADWAY, GRADING AND PAVING, STORM DRAINAGE, ELECTRICAL AND LIGHTING, UTILITY WORK AND FENCING.	\$43,716
LOS ANGELES	LOCAL HIGHWAY	LA 960179	0	DESIGN AND CONSTRUCT A GRADE SEPARATION IN SOUTH WILMINGTON TO SEPARATE VEHICLE/TRUCK TRAFFIC FROM AN ACTIVE RAIL LINE AND PROVIDE DIRECT ACCESS TO PORT TERMINALS, A COMMUNITY CENTER AND OTHER BUSINESSES.	\$69,029
LOS ANGELES	LOCAL HIGHWAY	LAF3170	0	PORT TRUCK TRAFFIC REDUCTION PROGRAM: WEST BASIN RAIL YARD. INTERMODAL RAIL YARD CONNECTING PORT OF LA WITH ALAMEDA CORRIDOR TO ACCOMMODATE INCREASED LOADING OF TRAINS AT THE PORT, THEREBY REDUCING TRUCK TRIPS TO OFF-DOCK RAIL YARDS.(LAF5204)	\$110,511
LOS ANGELES	LOCAL HIGHWAY	LAF1506	0	BIKE COMPATIBLE RDWY SAFETY AND LINKAGE ON PALOS VERDES DR. THE PROJECT WILL HAVE A CLASS II BIKE LANE ON BOTH SIDES OF PALOS VERDES DRIVE SOUTH, WITH AN UNPAVED SHOULDER FOR EMERGENCY USE. (DISTANCE 1.3 MILES)	\$788
LOS ANGELES	LOCAL HIGHWAY	LA 06717	0	F48 - INTERSECTION IMPROVEMENTS ON PACIFIC COAST HWY AT PALOS VERDES BLVD. INCLUDES A RIGHT TURN ONLY LANE ON WESTBOUND PALOS VERDES BLVD AT PACIFIC COAST HWY. PROJECT NO. MR318.08, FA NO. MOUMR318.08.	\$320
LOS ANGELES	LOCAL HIGHWAY	LA 06721	0	N58 - AVIATION BLVD. INTERSECTION IMPROVEMENTS AT ARTESIA BLVD. PLANS, SPECIFICATIONS, ESTIMATES, OBTAINING RIGHT OF WAY, AND CONSTRUCTION OF A RIGHT TURN ONLY LANE ON NORTHBOUND AVIATION BLVD AT ARTESIA BLVD. PROJECT NO. MR312.20. FA NO. MOUMR312.20.	\$847
LOS ANGELES	LOCAL HIGHWAY	LA 06997	0	N18 - INTERSECTION IMPROVEMENTS ON INGLEWOOD AVE AT MANHATTAN BEACH BLVD. FEASIBILITY ANALYSIS, PLANS, SPECIFICATIONS, ESTIMATES, OBTAINING RIGHT OF WAY, AND CONSTRUCTION OF A RIGHT TURN ONLY LANE ON SOUTHBOUND INGLEWOOD AVE AT MANHATTAN BEACH BLVD.	\$5,175
LOS ANGELES	LOCAL HIGHWAY	LAF3502	0	REDONDO BEACH BICYCLE TRANSPORTATION PLAN IMPLEMENTATION. IMPLEMENT CLASS II AND III BIKE FACILITIES IDENTIFIED IN THE CITY OF REDONDO BEACH'S ADOPTED BICYCLE TRANSPORTATION PLAN. APPROXIMATELY 2.1 CENTERLINE MILES OF BIKE LANES AND 15.8 CENTERLINE MILES OF BIKE ROUTES THROUGHOUT THE CITY OF REDONDO BEACH.	\$19,499
LOS ANGELES	LOCAL HIGHWAY	LAF5301	0	GRANT AVENUE SIGNAL IMPROVEMENTS. THIS PROJECT IS LOCATED IN REDONDO BEACH IN THE SOUTH BAY SUBREGION ON GRANT AVENUE BETWEEN INGLEWOOD AV AND AVIATION BL. THE PROJECT WILL UPGRADE SIX EXISTING TRAFFIC SIGNALS. THE PROJECT INVOLVES SYNCHRONIZATION, BIKE DETECTION, SIGNAL REPLACEMENT, VIDEO DETECTION, ADAPTIVE SIGNAL COORDINATION, WIRELESS CONNECTION AND INTEGRATION INTO THE REDONDO BEACH TRAFFIC MANAGEMENT CENTER (TMC).	\$1,535

TABLE 1 FTIP Projects - Continued

County	System	FTIP ID	Route #	Description	Project Cost (\$1,000's)
LOS ANGELES	LOCAL HIGHWAY	LA05129	0	VALLEY BLVD CAPACITY ENHANCEMENT PROJECT. PROJECT WILL IMPROVE A 1.7-MILE SECTION OF VALLEY BL FROM TEMPLE CITY BL TO CHARLOTTE AV BY WIDENING AND RECONFIGURING TO ACCOMMODATE AN ADD'L PEAK-PERIOD TRAVEL LANE IN EACH DIR, RELOCATE TRAFFIC SIGNALS AND PED LIGHTS, ADD RAISED CENTER-MEDIAN WITH PED LIGHTING, LANDSCAPING, SIDEWALK IMPROVEMENTS, A CLASS III BIKE LANE (17 MILES) AND WAYFINDING SIGNAGE.	\$1,420
LOS ANGELES	LOCAL HIGHWAY	LA07523	0	ROSEMEAD/SOUTH EL MONTE REGIONAL BICYCLE CONNECTOR PROJECT: (1) INSTALLS 7.8-MILE BIDIRECTIONAL CLASS 2 BIKE LANES ON GARVEY AV, ON WALNUT GROVE ST, AND ON RUSH ST. (2) INSTALLS BIKE PARKING AT THE ROSEMEAD CIVIC CENTER AND WAYFINDING SIGNAGE AT KEY DECISION POINTS.	\$1,320
LOS ANGELES	LOCAL HIGHWAY	LA03307	0	INTERSECTION IMPROVEMENTS ON BONITA AVE. AT CATARACT AVE. INSTALLATION OF NEW TRAFFIC SIGNAL, LIGHTING ON BONITA AVE AT CATARACT AVE AND THE SYNCHRONIZATION OF EXISTING SIGNALS ALONG BONITA AVE BETWEEN EUCLA AVE AND EASTERLY CITY LIMIT. NEW TRAFFIC SIGNAL ON BONITA AVENUE AT CATARACT AVENUE, AND SYNCHRONIZATION OF THE EXISTING SIGNALS ON BONITA AVENUE AT EUCLA AVENUE, SAN DIMAS AVENUE, IGLESIA STREET, WALNUT AVENUE, SAN DIMAS CANYON ROAD WITH THE NEW SIGNAL (5 CONSECUTIVE SIGNALS).	\$1,674
LOS ANGELES	LOCAL HIGHWAY	LA061012	0	CITYWIDE BIKE-WAY AND BICYCLE PARKING PROJECT: ESTABLISH CLASS II AND III BIKE LANES (TOTAL OF 15 MILES), INSTALL SIGNAGE, BICYCLE DETECTION LOOPS, AND BIKE RACKS.	\$182
LOS ANGELES	LOCAL HIGHWAY	LA02389	0	LAS TUNAS DRIVE STREETScape/PEDESTRIAN ENHANCEMENTS. CONSTRUCT LANDSCAPED MEDIANS, STREET FURNITURE, ENHANCED CROSSWALKS, AND RECONSTRUCT ADA CURB RAMPS.	\$1,184
LOS ANGELES	LOCAL HIGHWAY	LA01100	0	SAN GABRIEL BLVD. INTERSECTION IMPROVEMENTS AT BROADWAY AND LAS TUNAS. MODIFY & UPGRADE TRAFFIC SIGNALS FOR IMPROVED EFFICIENCY AND INSTALL ADA COMPLIANT RAMPS AS NEEDED. PROJECT WILL USE \$26 IN TOLL CREDITS FOR CON IN FY 14/15. TOLL CREDITS OF \$26 WILL BE USED TO MATCH FY 15 FEDERAL FUNDS FOR THE CON PHASE.	\$130
LOS ANGELES	LOCAL HIGHWAY	LA090359	0	GRADE SEP XINGS SAFETY IMPR: 35-MI FREIGHT RAIL CORR. THRGH SAN GAB. VALLEY - EAST, L.A. TO POMONA ALONG UPRR ALHAMBRA & L.A. SUBDIV - ITS 2318 SAFETEA #2178; 1436 #1934. PPNO 2318. NOGALES (LA) PROJECT INCLUDES WIDENING FROM 2 TRAVEL LANES TO 4 TRAVEL LANES OF E WALNUT DRIVE NO. EAST OF NOGALES FOR 2600 LINEAR FEET AND WIDENING FROM 2 TRAVEL LANES TO 4 TRAVEL LANES OF GALE AVE. WEST OF NOGALES FOR 1900 LINEAR FEET.	\$1,319,423
LOS ANGELES	LOCAL HIGHWAY	LA07119	0	HUNTINGTON DRIVE MULTIMODAL CAPACITY ENHANCEMENTS: (1) CONSTRUCT A SECOND LEFT-TURN LANE AT THE 2 INTERSECTIONS AT SAN MARINO AV AND AT SAN GABRIEL BL (EASTBOUND ON HUNTINGTON DR AND NORTHBOUND ON SAN MARINO AV AND SAN GABRIEL BL) TO INCREASE CAPACITY AND TRAFFIC FLOW. (2) MODIFIES SIGNAL TIMING TO SHORTEN THE LEFT-TURN MOVEMENT ON HUNTINGTON DR. (3) EXTENDS SIDEWALKS AND ENHANCE PEDESTRIAN FACILITIES.	\$1,445
LOS ANGELES	LOCAL HIGHWAY	LA08104	0	GOLDEN VALLEY ROAD - NEW HALL RANCH ROAD TO PLUM CANYON ROAD. 0 TO 4 LANES APPROXIMATELY 1.5 MILES.	\$11,000
LOS ANGELES	LOCAL HIGHWAY	LA00473	0	DOCKWEILER DR EXTENSION FROM LYONS AV TO EXISTING DOCKWEILER DR. CONSTRUCT A 4-LANE FACILITY (2 LANES IN EACH DIRECTION), OUTSIDE CURB & GUTTER, AND DRAINAGE IMPROVEMENTS (ABOUT 1.5 MILE)	\$11,126
LOS ANGELES	LOCAL HIGHWAY	LA00476	0	VIA PRINCESSA EXTENSION FROM MAGIC MOUNTAIN PKWY TO GOLDEN VALLEY RD. CONSTRUCT APPROXMTLY A 1-MILE FACILITY (3 LANES IN EACH DIRECTION), OUTSIDE CURB & GUTTER, & DRAINAGE IMPRVMT	\$22,602
LOS ANGELES	LOCAL HIGHWAY	LA00477	0	GOLDEN VALLEY ROAD WIDENING/GAP CLOSURE OVER STATE ROUTE 14 - CROSS VALLEY CONNECTOR. WIDEN TWO-LANE SR-14 OVERPASS TO SIX LANES. SR-14 SOUTHBOUND OFF-RAMP WILL BE WIDENED, TRAFFIC SIGNALS WILL BE INSTALLED AT SR-14 AND GOLDEN VALLEY ROAD, NEW 10-FOOT SIDEWALK AND CLASS I BIKE LANE WILL BE BUILT ON BOTH SIDES OF OVERPASS, PEDESTRIAN SIGNAL HEADS INSTALLED AND WAYFINDING SIGNS FOR PEDESTRIANS AND BICYCLISTS. (PED < 1/4 MILE & BIKE < 1 MILE)	\$8,705
LOS ANGELES	LOCAL HIGHWAY	LA06740	0	CONSTRUCT INTERSECTION IMPROVEMENTS, WIDEN AND RESTRIPE LYONS AVENUE FROM WILEY CANYON ROAD TO RAILROAD AVENUE TO ACCOMMODATE A CHANGE FROM 4 TO 6 LANES; APPROXIMATELY 1.7 MILES	\$2,320
LOS ANGELES	LOCAL HIGHWAY	LA06741	0	RESTRIPE WILEY CANYON ROAD FROM LYONS AVENUE TO RAILROAD AVENUE FROM 4 TO 6 LANES; APPROXIMATELY 1.7 MILES	\$1,500
LOS ANGELES	LOCAL HIGHWAY	LA06742	0	RESTRIPE ORCHARD VILLAGE ROAD FROM MCBEAN PARKWAY TO LYONS AVENUE FROM 4 TO 6 LANES; APPROXIMATELY 1.3 MILES	\$1,870
LOS ANGELES	LOCAL HIGHWAY	LA06743	0	CONSTRUCT INTERSECTION IMPROVEMENTS, WIDEN AND RESTRIPE NEW HALL AVENUE FROM RAILROAD AVENUE TO CARL COURT TO ACCOMMODATE A CHANGE FROM 4 TO 6 LANES; APPROXIMATELY 0.4 MILES	\$1,720
LOS ANGELES	LOCAL HIGHWAY	LA06744	0	CONSTRUCT INTERSECTION IMPROVEMENTS, WIDEN AND RESTRIPE RAILROAD AVENUE FROM NEW HALL AVENUE TO BOUQUET CANYON ROAD TO ACCOMMODATE A CHANGE FROM 4 TO 6 LANES; APPROXIMATELY 3 MILES	\$2,320

TABLE 1 FTIP Projects - Continued

County	System	FTIP ID	Route #	Description	Project Cost (\$1,000's)
LOS ANGELES	LOCAL HIGHWAY	LA06745	0	CONSTRUCT INTERSECTION IMPROVEMENTS, WIDEN AND RESTRIPE BOUQUET CANYON ROAD FROM SECO CANYON ROAD TO PLUM CANYON ROAD TO ACCOMMODATE A CHANGE FROM 4 TO 6 LANES; APPROXIMATELY 2.2 MILES	\$930
LOS ANGELES	LOCAL HIGHWAY	LA06746	0	CONSTRUCT INTERSECTION IMPROVEMENTS, WIDEN AND RESTRIPE PLUM CANYON ROAD FROM BOUQUET CANYON ROAD TO CITY LIMIT TO ACCOMMODATE A CHANGE FROM 4 TO 6 LANES; APPROXIMATELY 0.5 MILES	\$585
LOS ANGELES	LOCAL HIGHWAY	LA06747	0	CONSTRUCT INTERSECTION IMPROVEMENTS, WIDEN AND RESTRIPE WHITES CANYON ROAD FROM SOLEDAD CANYON ROAD TO CITY LIMIT TO ACCOMMODATE A CHANGE FROM 4 TO 6 LANES; APPROXIMATELY 2 MILES	\$930
LOS ANGELES	LOCAL HIGHWAY	LA06748	0	WIDEN AND RESTRIPE GOLDEN VALLEY ROAD FROM SOLEDAD CANYON ROAD TO SIERRA HIGHWAY FROM 4 TO 6 LANES; APPROXIMATELY 2.5 MILES, AND INSTALL TRAFFIC SIGNAL.	\$7,710
LOS ANGELES	LOCAL HIGHWAY	LA06750	0	CONSTRUCT INTERSECTION IMPROVEMENTS, WIDEN AND RESTRIPE MAGIC MOUNTAIN PARKWAY FROM AUTO CENTER DRIVE TO RAILROAD AVENUE TO ACCOMMODATE A CHANGE FROM 4 TO 6 LANES; APPROXIMATELY 1 MILE	\$1,410
LOS ANGELES	LOCAL HIGHWAY	LA06751	0	CONSTRUCT INTERSECTION IMPROVEMENTS, WIDEN AND RESTRIPE SIERRA HIGHWAY FROM VIA PRINCESSA TO CITY LIMIT TO ACCOMMODATE A CHANGE FROM 4 TO 6 LANES; APPROXIMATELY 5.5 MILES	\$3,750
LOS ANGELES	LOCAL HIGHWAY	LA06752	0	WIDEN AND RESTRIPE SIERRA HIGHWAY FROM SOLEDAD CANYON ROAD TO CITY LIMIT FROM 4 TO 6 LANES TO ACCOMMODATE A CHANGE FROM APPROXIMATELY 2 MILES	\$5,775
LOS ANGELES	LOCAL HIGHWAY	LA06754	0	VISTA CANYON ROAD BRIDGE OVER THE SANTA CLARA RIVER AND ROADWAY FROM VISTA CANYON COMMUNITY (JAKES WAY/LOST CANYON) TO SOLEDAD CANYON ROAD. INCLUDES 750-FOOT LONG BRIDGE, 1 LANE IN EACH DIRECTION, CLASS I BIKE LANE. (BIKE LANE LESS THAN 1 MILE)	\$20,800
LOS ANGELES	LOCAL HIGHWAY	LA960170	0	MAGIC MOUNTAIN PARKWAY EXTENSION FROM THE INTERSECTION OF BOUQUET CANYON/RAILROAD AVENUE TO VIA PRINCESSA. CONSTRUCT A NEW ROAD AND BRIDGE WITH 3 LANES IN EACH DIRECTION	\$19,478
LOS ANGELES	LOCAL HIGHWAY	LA9708004	0	SANTA CLARITA PARKWAY FROM BOUQUET CYN RD/SOLEDAD CYN INSTALL NEW ROADWAY (0 TO 4 LANES) (2.5 MILE)	\$17,550
LOS ANGELES	LOCAL HIGHWAY	LA9910013	0	VIA PRINCESSA EXTENSION FROM GOLDEN VALLEY ROAD TO APPROXIMATELY 350M WEST OF RAINBOW GLEN DRIVE, EAST OF ISABELLA PKWY	\$46,935
LOS ANGELES	LOCAL HIGHWAY	LA9910014	0	VIA PRINCESSA FROM OAKRIDGE DRIVE TO MAGIC MTN PRKWAY. FROM 0 - 6 LANES; LESS THAN ONE MILE.	\$11,650
LOS ANGELES	LOCAL HIGHWAY	LA9910016	0	SANTA CLARITA PKWY FROM SOLEDAD CYN RD TO VIA PRINCESSA (1.6 MILES); FROM 0 TO 6 LANES.	\$4,000
LOS ANGELES	LOCAL HIGHWAY	LA9910017	0	SANTA CLARITA PKWY FROM VIA PRINCESSA TO STATE HWY 14 (1 MILE) FROM 0 TO 6 LANES.	\$3,100
LOS ANGELES	LOCAL HIGHWAY	LAF3105	0	MCBEAN PARKWAY WIDENING/GAP CLOSURE OVER SANTA CLARA RIVER. WIDEN MCBEAN PARKWAY BRIDGE TO 8 LANES AND CONSTRUCT CLASS I BIKE PATH BETWEEN MCBEAN PARKWAY AND SANTA CLARA RIVER TRAIL.(DISTANCE .25 MI)	\$6,864
LOS ANGELES	LOCAL HIGHWAY	LAF3300	0	ITS PHASE IV INTERCONNECT GAP CLOSURE AND SIGNAL SYNC. THIS PROJECT INVOLVES RE-SYNCHRONIZING TRAFFIC SIGNALS ON ARTERIALS, DEPLOYING AN ADAPTIVE SIGNAL SYSTEM, AND A REDUNDANT FIBER-OPTIC INTERCONNECT SYSTEM. (APPROX. 40+ SIGNALS)	\$3,902
LOS ANGELES	LOCAL HIGHWAY	LAF3535	0	CITYWIDE WAYFINDING PROGRAM FOR PEDESTRIANS AND BICYCLISTS. DIRECT USERS TO METROLINK STATIONS AND OTHER REGIONAL TRIP GENERATORS, DESIGN AND INSTALL WAYFINDING SIGNS ALONG THE CITY'S EXISTING NETWORK OF MULTI-USE PATHS, ON-STREET BIKEWAYS, PASEOS IN THE VALENCIA AND SAUGUS NEIGHBORHOODS, AND SIDEWALKS ALONG MOST MAJOR ROADWAYS.	\$271
LOS ANGELES	LOCAL HIGHWAY	LAF3800	0	NEWHALL GATEWAY ROUNDABOUT; CONSTRUCT A ROUNDABOUT AND INSTALL LANDSCAPING AND ENTRY MONUMENT AT THE INTERSECTION OF MAIN STREET AND NEWHALL AVENUE.	\$1003
LOS ANGELES	LOCAL HIGHWAY	LAF5303	0	DEPLOYS AN ADAPTIVE TRAFFIC SIGNAL SYSTEM ON 12 CORRIDORS WITH 101 TRAFFIC SIGNALS: MCBEAN PKWY, MAGIC MOUNTAIN PKWY, WILEY CANYON RD, ORCHARD VILLAGE RD, LYONS AV, RAILROAD AV, NEWHALL AV, BOUQUET CANYON RD, GOLDEN VALLEY RD, NEWHALL RANCH RD, SIERRA HWY, AND VIA PRINCESSA.	\$2,238
LOS ANGELES	LOCAL HIGHWAY	LAF7105	0	LYONS AV/DOCKWEILER DR EXTENSION: (1) EXTENDS THE TWO LANES IN EACH DIRECTION ON LYONS AV FROM RAILROAD AV. EAST FOR A DISTANCE OF APPROX 500 FT TO CONNECT WITH A FUTURE EXTENSION PLANNED FOR DOCKWEILER DR. (2) CONSTRUCTS 8-FT SIDEWALKS AND CLASS II BIKE LANES ON BOTH SIDES. (3) INCLUDES PED/BIKE FACILITIES AND LANDSCAPING.	\$9,332
LOS ANGELES	LOCAL HIGHWAY	LAF7301	0	INTELLIGENT TRANSPORTATION SYSTEMS (ITS) PHASE VI: (1) COORDINATES SIGNAL TIMING ALONG 19 CORRIDORS TO ENHANCE THE ADAPTIVE SYSTEMS PERFORMANCE. (2) INSTALLS ADDITIONAL SYSTEM DETECTION AT STRATEGIC LOCATIONS. (3) COMPLETES THE CITY'S FIBER OPTIC INTERCONNECTION SYSTEM ALONG AVENUE SCOTT, AVENUE STANFORD, AND COPPERHILL DR TO COMMUNICATE WITH CITY'S EMERGENCY OPERATIONS CENTER - PE ONLY	\$2,429

TABLE 1 FTIP Projects - Continued

County	System	FTIP ID	Route #	Description	Project Cost (\$1,000's)
LOS ANGELES	LOCAL HIGHWAY	LA0C8092	0	VALLEYVIEW AVE GRADE SPARATN AT BNSF RAILWAY SOUTH OF STAGE RD. CONSTRUCT A GRADE SPARATN FOR VALLEYVIEW AVE FROM EXSTNG BNSF TRACKS BY CONSTRUCTNG A HWY UNDERPASS PPNO 3117 (3022)..	\$75,177
LOS ANGELES	LOCAL HIGHWAY	LA0G1055	0	CONSTRUCT EASTERN MICHIGAN AVE NEIGHBORHOOD GREENWAY IN VICINITY OF EDISON LANGUAGE ACADEMY - CROSSWALK STRIPING AT CRITICAL INTERSECTIONS, CURB EXTENSIONS AND DUAL CURB RAMPS, AND WAYFINDING AND SHARED LANE MARKINGS. EDUCATE STUDENTS AND PARENTS. CREATE DROP-OFF AND PICK-UP PLAN.	\$411
LOS ANGELES	LOCAL HIGHWAY	LA0G1142	0	4TH ST BIKE/PED UPGRADES PROJECT WILL WIDEN THE EAST SIDEWALK OF 4TH ST. UP TO 8 FT BETWEEN BROADWAY AND COLORADO (0.15 MILE). THE PROJECT WILL ALSO ADD CLASS III BIKE LANES ON 4TH ST., BETWEEN BROADWAY AND OLYMPIC DR. INCLUDING BIKE SHARROW STRIPING ON THE 4TH ST. BRIDGE OVER THE I-10 FREEWAY (0.4 MILE).	\$750
LOS ANGELES	LOCAL HIGHWAY	LA990352	0	PALISADES BLUFF STABILIZATION CALIFORNIA INCLINE ADJACENT (TEA21-#453).. TOLL CREDITS OF \$897 WILL BE USED TO MATCH FY15 FEDERAL FUNDS FOR THE CON PHASE	\$7,776
LOS ANGELES	LOCAL HIGHWAY	LAF1532	0	SCHOOL-BASED BICYCLE TRAINING, SANTA MONICA. PROVIDE TRAINING FOR STUDENTS AT 2 MIDDLE SCHOOLS ON HOW TO SAFELY RIDE BICYCLE ON CITY STREETS TO ACCESS SCHOOL.	\$130
LOS ANGELES	LOCAL HIGHWAY	LAF1728	0	CITY OF SANTA MONICA ITS IMPROVEMENTS. SANTA MONICA REAL TIME BEACH PARKING SIGNS. THIS PROJECT WILL MAKE INFORMATION REGARDING BEACH PARKING AVAILABLE TO MOTORISTS DESTINED FOR SANTA MONICA BEACH PARKING LOTS. TOLL CREDIT BEING USED IN FY13/14 FOR \$57 IN CONS.....	\$1,619
LOS ANGELES	LOCAL HIGHWAY	LAF3505	0	BIKE NETWORK LINKAGES TO EXPOSITION LIGHT RAIL PROJECT. BIKE NETWORK ENHANCEMENTS TO SUPPORT EXPOSITION LINE. INCREASED SAFETY AND CONVENIENCE WITH SIGNAL DETECTION, HIGHLY VISIBLE LANE MARKINGS AND NEW BIKE RACKS. THE PROJECT AREA IS LOCATED THROUGHOUT THE CITY OF SANTA MONICA AND NO MORE THAN TWO MILES FROM THE PROPOSED EXPOSITION LIGHT RAIL LINE STATIONS.	\$3,429
LOS ANGELES	LOCAL HIGHWAY	LAF3703	0	A 'NO NET NEW TRIPS' RIDESHARE TOOLKIT. DEVELOP A TDM TOOLKIT WITH ONLINE MULTI-MODAL MOBILITY INFORMATION, BIKE ACCOMMODATIONS, 300 WALKING-ROLLING CARTS, 75 BIKE LOCKERS & INCENTIVE PROGRAMS FOR EMPLOYERS, SCHOOLS & NEIGHBORHOODS. WITHIN THE CITY OF SANTA MONICA IN DEMAND MANAGEMENT AREAS AS DEFINED IN THE LAND USE AND CIRCULATION ELEMENT (LUCE) ADOPTED JULY 2010.	\$849
LOS ANGELES	LOCAL HIGHWAY	LAF5524	0	IMPLEMENTATION OF A SANTA MONICA BIKE-SHARE PROGRAM, INCLUDING THE PURCHASE AND INSTALLATION OF 250 BIKES AND 25 DOCKING STATIONS TO BE LOCATED AT ACTIVITY NODES AND TRANSIT STATIONS (INCLUDING EXPO/LRT STATIONS). TWO VEHICLES WILL BE ACQUIRED AND OUTFITTED TO TRANSPORT AND REDISTRIBUTE BICYCLES BETWEEN STATIONS AS NEEDED. THE BIKE-SHARE DOCKING STATIONS WILL BE SOLAR POWERED WHERE APPROPRIATE AND INCLUDE A TECHNOLOGY PLATFORM FOR SYSTEM OPERATION THROUGH THE WEB AND SMART PHONE APPLICATIONS.	\$2,493
LOS ANGELES	LOCAL HIGHWAY	LAF5812	0	EXPO/LRT COLORADO AVENUE TRANSIT VILLAGE ENHANCEMENTS. THIS PROJECT IS LOCATED IN SANTA MONICA ALONG COLORADO AVENUE BETWEEN 4TH ST AND 19TH ST. IT WILL INSTALL PARTIAL PARKWAYS ON THE NORTH SIDE TO MATCH THE SOUTH SIDE, SIX ARTISTIC DESIGN FENCES AT T-JUNCTIONS, AND A TRACKWAY VISIBILITY TREATMENT ALONG THE CORRIDOR. FUNDS ARE REQUESTED FOR CONSTRUCTION AND INSTALLATION COSTS. THE ORIGINAL SCOPE OF THIS PROJECT WAS REDUCED BY ELIMINATING 50% OF PARKWAYS.	\$1,236
LOS ANGELES	LOCAL HIGHWAY	LAF17320	0	SANTA MONICA - SANTA MONICA SIGNAL SYNC IMPROVEMENTS : (1) ENHANCES EXISTING TRAFFIC MANAGEMENT SYSTEM WITH INSTALLATION OF UP TO SIXTY (60) VIDEO DETECTION CAMERAS (2-4 CAMERAS AT INTERSECTION) AT TWENTY ONE (21) CRITICAL INTERSECTIONS ALONG WILSHIRE BL, PICO BL, OCEAN AV, SANTA MONICA BL, MAIN ST, OCEAN PARK BL, MONTANA AV, AND 14TH ST. (2) THE PROJECT WILL ALSO INCLUDE SIGNAGE AND STRIPING TO MINIMIZE TURN MOVEMENT CONFLICTS BETWEEN MIXED FLOW AND BICYCLE LANES.	\$676
LOS ANGELES	LOCAL HIGHWAY	LAF7704	0	MULTI-MODAL WAYFINDING, CONGESTION REDUCTION/STATION ACCESS, IMPROVES VEHICLE, PEDESTRIAN, AND BICYCLE CIRCULATION BY PROVIDING 306 WAYFINDING SIGNS, 6 TRANSIT MAP CASES, AND 12 ELECTRONIC PARKING GUIDANCE SIGNS. IT WILL SERVE THE SURROUNDING AREA OF THE METRO EXPO LINE STATIONS, DOWNTOWN, AND CIVIC CENTER.	\$1,612
LOS ANGELES	LOCAL HIGHWAY	LA0C8095	0	CHERRY AVE. WIDENING PROJECT. BET 19TH ST AND PACIFIC COAST HIGHWAY BY WIDENING THE ARTERIAL FROM ONE TO TWO LANES IN EACH DIRECTION. (PPNO 3128). SAFETEA-LU #3203	\$6,721
LOS ANGELES	LOCAL HIGHWAY	LAF1178	0	FIRESTONE BLVD IS EXISTING 2 LANES IN EACH DIRECTION. AFTER THE PROJECT WILL BE 3 LANES IN EACH DIRECTION. THE LENGTH OF THE PROJECT IS .75 MILES. PRIMARILY IT WILL WIDEN FIRESTONE BLVD AND ATLANTIC AVENUE AND REALIGN THEIR INTERSECTION. IT WILL ALSO ADD 3RD NORTHBOUND THROUGH LANE ON ATLANTIC AVENUE FROM FIRESTONE BOULEVARD TO APPROXIMATELY 200' NORTH OF SALT LAKE AVENUE/PATATA STREET, AND COMPLETE ADJACENT IMPROVEMENTS AT RAILROAD CROSSINGS AT FIRESTONE BLVD AND ATLANTIC AVENUE.	\$33,389
LOS ANGELES	LOCAL HIGHWAY	LAF3124	0	FIRESTONE BOULEVARD CAPACITY IMPROVEMENTS, INCREASE THE NUMBER OF LANES FROM 4 TO 6 ON FIRESTONE BLVD WITHIN THE ROW, RAISED LS MEDIANS, SIDEWALKS, BUS SHELTERS & PULLOUTS, C&G, STREET LIGHTING, & UTILITY RELOCATION..	\$14,721

TABLE 1 FTIP Projects - Continued

County	System	FTIP ID	Route #	Description	Project Cost (\$1,000's)
LOS ANGELES	LOCAL HIGHWAY	LAF7309	0	TWEEDY BOULEVARD SIGNAL SYNCHRONIZATION PROJECT: (1) INTERCONNECTS 18 TRAFFIC SIGNALS USING FIBER OPTIC CABLE AND WIRELESS COMMUNICATIONS (2) SYNCHRONIZES SIGNAL TIMING TO IMPROVE TRAFFIC FLOW, AND REDUCES DELAYS ALONG THE 2.7-MILE ARTERIAL. (3) INSTALL A CLOSED CIRCUIT TELEVISION CAMERA (CCTV) AT THE INTERSECTION OF LONG BEACH BL TO SUPPORT THE ADVANCE TRANSPORTATION MANAGEMENT SYSTEMS (ATMS).	\$1,646
LOS ANGELES	LOCAL HIGHWAY	LA06101	0	PEDESTRIAN ENHANCEMENTS ON MISSION ST INCLUDING REPLACEMENT SIDEWALKS AND REPAIR, SIGNAGE, STREET FURNITURE, LIGHTING, IRRIGATION, TREES AND MORE.	\$75
LOS ANGELES	LOCAL HIGHWAY	LA06489	0	PASADENA AVE / MONTEREY RD PARTIAL GRADE SEPERATION - PRELIMINARY ENGINEERING - FEASABILITY, SAFTEA-LU DEMO # 489.	\$288
LOS ANGELES	LOCAL HIGHWAY	LAF5308	0	SOUTH PASADENA'S ATMS, CENTRAL TCS AND FOIC FOR FAIR OAKS AV. THIS PROJECT IS LOCATED IN SOUTH PASADENA ON FAIR OAKS AV BETWEEN COLUMBIA ST AND HUNTINGTON DR. IT WILL ESTABLISH A FIBER-OPTIC BACKBONE COMMUNICATION SYSTEM CONNECTION BETWEEN 12 SIGNALS ON FAIR OAKS AV AND CITY HALL AND INSTALL THE ATMS/CENTRAL MANAGEMENT/CONTROL SYSTEM AT ITS CITY HALL BUILDING. FUNDS ARE FOR DESIGN AND CONSTRUCTION COSTS.	\$580
LOS ANGELES	LOCAL HIGHWAY	LA0B422	0	FAIR OAKS AV & SR-10 IMPROVEMENT PROJECT (ROGAN FUNDS, HRS394) EXPAND EXIT OFF-RAMP OF 110 NB, ADD A HOOK RAMP FOR EXISTING ON-RAMP 110 SB.	\$9,418
LOS ANGELES	LOCAL HIGHWAY	LA061002	0	IMPLEMENTATION OF VARIOUS ITS COMPONENTS AT LOCATIONS NOT COVERED BY PREVIOUS 1995 METRO CFP UNDER SOUTH BAY SIGNAL SYNCHRONIZATION. THIS PROJECT WILL UPGRADE SIGNALS AND ITS COMPONENTS ALONG MAJOR ARTERIALS WITHIN THE CITY, CCTV MODULE AND CCTV CAMERAS, VIDEO DETECTION AND CONTROLLER UPGRADES AT VARIOUS LOCATIONS	\$1,364
LOS ANGELES	LOCAL HIGHWAY	LA061010	0	ADDITION OF DEDICATED RIGHT-TURN LANE FOR SOUTHBOUND CRENSHAW BOULEVARD AT DEL AMO BOULEVARD, 208TH STREET AND PROPOSED TRANSIT CENTER ENTRANCE WILL INCREASE INTERSECTION OPERATIONAL AND STORAGE CAPACITIES; EXTENSION OF 208TH STREET APPROXIMATELY 350 FEET WEST OF CRENSHAW BOULEVARD TO MIRROR THE EXISTING 208TH STREET ROADWAY EAST OF CRENSHAW BOULEVARD.	\$3,291
LOS ANGELES	LOCAL HIGHWAY	LA06724	0	INTERSECTION IMPROVEMENTS TO ADD NORTHBOUND, EASTBOUND AND WESTBOUND DEDICATED RIGHT TURN LANES; ADD SECOND EASTBOUND LEFT-TURN LANE; AND TRAFFIC SIGNAL UPGRADES THROUGH WIDENING AND RE-CHANNELIZATION.	\$19,600
LOS ANGELES	LOCAL HIGHWAY	LAF3312	0	CITY OF TORRANCE ITS & TRAFFIC IMPROVEMENTS. IMPLEMENT ITS COMPONENTS AT LOCATIONS NOT COVERED BY '95 METRO CFP SOUTH BAY SIGNAL SYNCH PROJECT, TO PROVIDE EFFECTIVE CITY WIDE AND MULTI-JURISDICTIONAL TRAFFIC MANAGEMENT: *CRENSHAW BLVD BETWEEN PCH AND THE MOST SOUTH CITY CONTROLLED SIGNALIZED INTERSECTION (APPROX 3 SIGNALS)	\$1,364
LOS ANGELES	LOCAL HIGHWAY	LAF3624	0	DOWNTOWN TORRANCE PEDESTRIAN IMPROVEMENT PROJECT TO INCREASE CONNECTIVITY, IMPROVE PEDESTRIAN SAFETY, AND REDUCE AUTOMOBILE DEPENDENCY. SCOPE INCLUDES CHOKERS/BULB-OUTS, LANDSCAPING, PAVERS AND/OR STAMPED PAVEMENT CROSSINGS, THE STREETS BORDERING THE PROJECT AREA SERVE THREE DIFFERENT TORRANCE TRANSIT BUS ROUTES (LINES 1, 3, AND 5). THESE ROUTES INTERSECT AT THREE POINTS IN THE DOWNTOWN AREA, MAKING THIS A PRIME LOCATION TO IMPROVE THE CONNECTIONS TO THE SOUTH BAY AND DOWNTOWN LOS ANGELES.	\$118
LOS ANGELES	LOCAL HIGHWAY	LA061133	0	CONSTRUCT A BRIDGE (LA CRETZ CROSSING) OVER THE LA RIVER IN THE NORTH AT WATER VILLAGE AREA. LA CRETZ CROSSING IS A NON-MOTORIZED MULTIMODAL BRIDGE PROJECT PROVIDING SAFE, YEAR-ROUND ACCESS FROM THE NORTH AT WATER COMMUNITY TO PEDESTRIAN HIKING AND EQUESTRIAN BRIDLE PATHS IN GRIFFITH PARK AND LA RIVER BIKE PATH. THE BRIDGE IS A CLASS 1 BIKEWAY AND THE TOTAL LENGTH OF THE BRIDGE IS 390 FEET.	\$9,038
LOS ANGELES	LOCAL HIGHWAY	LA1161	0	GROUP PROJECTS FOR PAVEMENT RESURFACING AND/OR REHABILITATION ON LOCAL ROADS THROUGHOUT COUNTY. PROJECTS ARE CONSISTENT WITH 40 CFR PART 93.126, 127, 128, EXEMPT TABLES 2 & 3 CATEGORIES. PAVEMENT RESURFACING, REHABILITATION, RECONSTRUCTION, AC OVERLAYS, ROAD MAINTENANCE TO PREVENT AND ELIMINATE HAZARDS; NO LANE ADDITIONS. THERE ARE PROJECTS IN THE GROUPED PROJECT LISTING THAT CONTAIN PROJECTS WITH TOLL CREDITS.	\$408,140
LOS ANGELES	LOCAL HIGHWAY	LA1162	0	GROUP PROJECTS FOR BICYCLE AND PEDESTRIAN FACILITIES. PROJECTS ARE CONSISTENT WITH 40 CFR PART 93.126, 127, 128, EXEMPT TABLES 2 & 3 CATEGORIES. PROJECTS TO UPGRADE, CREATE, MAINTAIN, ENHANCE, OR ELIMINATE HAZARDS FOR PEDESTRIANS AND CYCLIST FACILITIES THROUGHOUT COUNTY.	\$149,035
LOS ANGELES	LOCAL HIGHWAY	LA1162N	0	GROUP PROJECTS FOR BICYCLE AND PEDESTRIAN FACILITIES. PROJECTS ARE CONSISTENT WITH 40 CFR PART 93.126, 127, 128, EXEMPT TABLES 2 & 3 CATEGORIES. PROJECTS TO UPGRADE, CREATE, MAINTAIN, ENHANCE, OR ELIMINATE HAZARDS FOR PEDESTRIANS AND CYCLIST FACILITIES THROUGHOUT COUNTY, NON REPORTABLE TCMS, PROJECT SPLIT FROM LA1162, BICYCLE TYPE PROJECTS DO NOT EXCEED 1 MILE AND PED PROJECTS DO NOT EXCEED 1/4 MILE.	\$24,660

TABLE 1 FTIP Projects - Continued

County	System	FTIP ID	Route #	Description	Project Cost (\$1,000's)
LOS ANGELES	LOCAL HIGHWAY	LA1163	0	GROUP PROJECTS FOR SAFETY AND OPERATING IMPROVEMENTS ON THE LOCAL HIGHWAY SYSTEM THROUGHOUT THE COUNTY. PROJECTS ARE CONSISTENT WITH 40CFR PART 93.126,127,128, EXEMPT TABLES 2 & 3 CATEGORIES. RAILROAD/HIGHWAY CROSSING, SAFER FEDERAL-AID SYSTEM ROADS, SHOULDER IMPROVEMENTS, PROJECTS THAT CORRECT, IMPROVE, OR ELIMINATE A HAZARDOUS LOCATION OR FEATURE, TRAFFIC CONTROL DEVICES AND OPERATING ASSISTANCE, SIGNALIZATION PROJECTS (INDIVIDUAL INTERSECTIONS), PAVEMENT MARKING DEMONSTRATION PROJECTS, TRUCK CLIMBING LA GROUP PROJECTS FOR PLANTING, LANDSCAPING, TRANSPORTATION SYSTEM BETTERMENTS, BEAUTIFICATION AND SCENIC EASEMENTS THROUGHOUT THE COUNTY (NO LANE ADDITIONS). PROJECTS ARE CONSISTENT WITH 40CFR PART 93.126,127,128, EXEMPT TABLES 2 & 3 CATEGORIES.	\$206,485
LOS ANGELES	LOCAL HIGHWAY	LA1164	0	GROUP PROJECTS FOR PLANTING, LANDSCAPING, TRANSPORTATION SYSTEM BETTERMENTS, BEAUTIFICATION AND SCENIC EASEMENTS THROUGHOUT THE COUNTY (NO LANE ADDITIONS). PROJECTS ARE CONSISTENT WITH 40CFR PART 93.126,127,128, EXEMPT TABLES 2 & 3 CATEGORIES.	\$78,774
LOS ANGELES	LOCAL HIGHWAY	LA1165	0	GROUP PROJECTS FOR DIRECTIONAL AND INFORMATIONAL SIGNAGE ON LOCAL ROADS THROUGHOUT THE COUNTY. PROJECTS ARE CONSISTENT WITH 40CFR PART 93.126,127,128, EXEMPT TABLES 2 & 3 CATEGORIES. DIRECTIONAL AND INFORMATIONAL SIGNS, SIGN REMOVALS, AND/OR SYSTEMS TO IMPROVE OR UPGRADE SIGNAGE MECHANISMS.	\$126,998
LOS ANGELES	LOCAL HIGHWAY	LA1165N	0	GROUP PROJECTS FOR DIRECTIONAL AND INFORMATIONAL SIGNAGE ON LOCAL ROADS THROUGHOUT THE COUNTY. PROJECTS ARE CONSISTENT WITH 40CFR PART 93.126,127,128, EXEMPT TABLES 2 & 3 CATEGORIES. DIRECTIONAL AND INFORMATIONAL SIGNS, SIGN REMOVALS, AND/OR SYSTEMS TO IMPROVE OR UPGRADE SIGNAGE MECHANISMS, NON REPORTABLE TCMS, PROJECT SPLIT FROM LA1165.	\$16,108
LOS ANGELES	LOCAL HIGHWAY	LA00279	0	ATLANTIC BLVD. BRIDGE OVER THE LA RIVER 5/8 MILE N SLAUSON AVE. WIDEN 6 LANE BRIDGE TO ADD RIGHT TURN LANE (BRIDGE #53C0252)	\$20,838
LOS ANGELES	LOCAL HIGHWAY	LA E1610	0	RECONSTRUCT WHITTIER BLVD AND IMPROVE PARKWAY DRAINAGE FROM PHILADELPHIA STREET TO FIVE POINTS (WASHINGTON BOULEVARD) IN WHITTIER	\$1,530
LOS ANGELES	LOCAL HIGHWAY	LA0F073	0	PROJECTS WITHIN AND NEAR LOS ANGELES INTERNATIONAL AIRPORT TO ELIMINATE TRAFFIC BOTTLENECKS. (LOS ANGELES WORLD AIRPORTS) SEC. 336 FUNDING	\$5,067
LOS ANGELES	LOCAL HIGHWAY	LA06994	0	HATHORNE BLVD. CORRIDOR IMPROVEMENT PROJECT: THIS PROJECT WILL INSTALL NB RIGHT TURN LANES ON HAWTHORNE BLVD AT THE INTERSECTIONS OF LOMITA BLVD., AND 182ND STREET. IN ADDITION IT WILL ADD WB RIGHT TURN LANE ON HAWTHORNE BLVD AT THE INTERSECTION OF EMERALD ST. AND SPENCER ST.	\$3,479
LOS ANGELES	LOCAL HIGHWAY	LA06830	0	I-710 IMPROVEMENTS/SHOEMAKER BRIDGE - DOWNTOWN EXITS. THE PROJECT MAKES BICYCLE, PEDESTRIAN, AND STREETSCAPE IMPROVEMENTS ON MAJOR THOROUGHFARES.	\$85,000
LOS ANGELES	LOCAL HIGHWAY	LA061007	0	SBCOG WILL PREPARE THE FUNDING AGREEMENT BETWEEN METRO AND CITY OF TORRANCE. ANZA/VISTA MONTANA/PACIFIC COAST HWY INTERSECTION WIDENING IMPROVEMENTS TO ADD SOUTHBOUND THROUGH LANE AND SIGNAL UPGRADES TO PROVIDE PROTECTED NORTHBOUND/SOUTHBOUND LEFT-TURN PHASING. MODIFY STRIPING TO ACCOMMODATE A LONGER NORTHBOUND LEFT-TURN LANE. PROJECT TO INCLUDE ACQUISITION OF RIGHT-OF-WAY TO IMPLEMENT IMPROVEMENTS.	\$2,900
LOS ANGELES	LOCAL HIGHWAY	LA996347	0	BRIDGE NO. 53C1972, FIRESTONE BLVD, OVER LOS ANGELES RIVER, 152 M W/O LONG BEACH FREEWAY. REHABILITATE 5-LANE BRIDGE & WIDEN TO 6-LANE BRIDGE, ADD SHOULDERS, AND UPGRADE BRIDGE RAILINGS. FED PROJ: HP2IL-5257016)	\$19,381
LOS ANGELES	LOCAL HIGHWAY	LA061022	0	PACIFIC COAST HIGHWAY AT BIG ROCK DR. INTERSECTION IMPROVEMENTS AND AT LA COSTA AREA PEDESTRIAN IMPROVEMENTS. THE PROJECT WILL INVOLVE THE INSTALLATION OF TRAFFIC SIGNALS, ADDITION OF PROTECTED SIGNAL PHASES AND FLASHING BEACONS.	\$950
LOS ANGELES	LOCAL HIGHWAY	LA06895	0	WIDEN 10TH ST WEST FROM 6 LANES TO 8 LANES 600' S/O RANCHO VISTA BLVD (RVB) TO AVE O-4; ADDITIONAL RIGHT TURN LANES FROM 10TH WEST UNTO NB SR138/14 ON RAMP AND AV MALL ENTRANCE; TRAFFIC SIGNAL UPGRADES AND MODIFICATIONS AT THE INTERSECTIONS OF 10TH ST WEST AND RVB, AV MALL ENTRANCE, DESTINATION O-8, AND SR 138/14 SB OFF-RAMP; ADD NB AND SB RIGHT TURN LANES ON 10TH ST WEST AT RVB; MODIFY EXISTING SR 138/14 ON AND OFF-RAMPS AT 10TH ST WEST; AND OTHER REQUIRED IMPROVEMENTS.	\$90,000
LOS ANGELES	LOCAL HIGHWAY	LA06931	0	SR138 (SR-14) AVENUE M INTERCHANGE. PROJECT WILL WIDEN AVENUE M AND THE AVENUE M OVERCROSSING FROM ONE TO THREE LANES IN EACH DIRECTION, INTERCHANGE GEOMETRIC ENHANCEMENTS, TRAFFIC SIGNALS AT ON AND OFF RAMPS, LANDSCAPING, INTERSECTION MODIFICATIONS ON AVENUE M AT 10TH STREET WEST AND 20TH STREET WEST, AND PEDESTRIAN IMPROVEMENTS, INCLUDING NEW SIDEWALK AND PEDESTRIAN CURB RAMPS.	\$20,000
LOS ANGELES	LOCAL HIGHWAY	LA06929	0	SR138 (SR-14) AVENUE K OFF-RAMP IMPROVEMENTS: 1 NB OFF RAMP INTERSECTION AT AVENUE K & 15TH ST W A R-TURN POCKET (UNDER STUDY) 2 INTERSECTION MODIFICATIONS AT AVE K & 10TH STREET W (TO SUPPORT R-TURN POCKET UNDER STUDY) 3 AVE K GAP CLOSURE FROM 10TH ST W TO 12TH ST W WIDEN TO 3 LANES IN THE WB DIRECTION (CURRENTLY 2 WB LANES WEST OF 10TH ST. W AND 3 WB LANES WEST OF 12TH ST. W). 4 CLASS I BIKEPATH ALONG AMARGOSA CREEK BTW AVENUE K AND AVENUE J-8 (APOX 0.001 MI). 5. FREEWAY LANDSCAPE IMPROVEMENTS.	\$15,000

TABLE 1 FTIP Projects - Continued

County	System	FTIP ID	Route #	Description	Project Cost (\$1,000's)
LOS ANGELES	LOCAL HIGHWAY	LA06928	0	SR138 (SR-14) AVENUE J INTERCHANGE. PROJECT WILL INCLUDE A NEW NORTHBOUND OFF RAMP AND SOUTHBOUND ON RAMP FOR SR138. NEW TRAFFIC SIGNALS AT THE ON AND OFF RAMP, AND INTERCHANGE GEOMETRIC CHANGES. IMPROVEMENTS ON AVENUE J INCLUDE TRAFFIC SIGNAL MODIFICATIONS ON AVENUE J AT 15TH STREET WEST, 20TH STREET WEST, VALLEY CENTRAL WAY, 25TH STREET WEST AND 30TH STREET WEST; PEDESTRIAN AND BIKEWAY IMPROVEMENTS AND A TRAFFIC SIGNAL AT AVENUE J AND 17TH STREET WEST.	\$10,000
LOS ANGELES	LOCAL HIGHWAY	LA06927	0	SR138 (SR-14) AVENUE G INTERCHANGE. PROJECT WILL WIDEN AVENUE G AND THE AVENUE G OVERCROSSING FROM ONE TO THREE LANES IN EACH DIRECTION, AND INCLUDE GEOMETRIC CHANGES TO THE SR-138(SR-14) ON/OFF RAMP, INTERSECTIONS CONTROLS, LANDSCAPING, DRAINAGE IMPROVEMENTS, AND PEDESTRIAN IMPROVEMENTS.	\$15,000
LOS ANGELES	LOCAL HIGHWAY	LAF3518	0	DAISY CORRIDOR AND 6TH STREET BIKE BOULEVARD. CONSTRUCT TWO (2) BIKEWAY BOULEVARDS ALONG TWO CORRIDORS KNOWN AS THE DAISY CORRIDOR AND 6TH STREET IN LONG BEACH. THE PROPOSED BIKE BOULEVARD ALONG THE DAISY CORRIDOR IS A NORTH-SOUTH ROUTE BETWEEN BROADWAY, BIKE LANE (CLASS II) IS LESS THAN 1 MILE.	\$2,655
LOS ANGELES	LOCAL HIGHWAY	LA000800	0	GROUPED PROJECTS FOR BRIDGE REHABILITATION AND RECONSTRUCTION - HBP PROGRAM PROJECTS ARE CONSISTENT WITH 40 CFP PART 93.126 EXEMPT TABLES 2 CATEGORIES - WIDENING NARROW PAVEMENTS OR RECONSTRUCTION BRIDGES (NO ADDITIONAL TRAVEL LANES)	\$363,153
LOS ANGELES	LOCAL HIGHWAY	LA06739	0	AGOURA ROAD WIDENING. WIDEN AND REALIGN ROADWAY FROM WESTERLY CITY LIMITS TO CORNELL DRIVE (APPROX 2 MILES). SOME AREAS ARE TWO LANES AND WILL BE WIDENED TO FOUR LANES. THE OTHER PORTIONS OF THE STREET ALREADY HAVE FOUR LANES. CONSTRUCT/MODIFY SIDEWALKS AND BIKE LANES (2 MILES); ADD LANDSCAPED MEDIANS	\$17,210
LOS ANGELES	LOCAL HIGHWAY	LAF3612	0	COLORADO PEDESTRIAN PROMENADE: LRT STATION TO PIER/BEACH A. PEDESTRIAN PROMENADE ON COLORADO AVENUE TO CONNECT THE EXPO LIGHT RAIL TERMINUS STATION AT 4TH STREET WITH DOWNTOWN SANTA MONICA, THE CIVIC CENTER AREA, THE PIER AND THE BEACH. THE PROJECT IS LOCATED ON COLORADO AVENUE BETWEEN 4TH STREET AND THE SANTA MONICA PIER IN THE CITY OF SANTA MONICA, AND INCLUDES THE STREET, THE SIDEWALKS AND BOTH INTERSECTIONS. THE TOTAL PROJECT AREA IS APPROXIMATELY 1,240 LINEAR FEET.	\$15,066
LOS ANGELES	LOCAL HIGHWAY	LAE2517	0	WIDEN MAINE AVE. IN BALDWIN PARK ADD 1 RIGHT TURN AND 1 LEFT TURN ONLY LANE (SAFETEA-LU DEMO ID #2517). NOT A CAPACITY ENHANCEMENT PROJECT...	\$683
LOS ANGELES	LOCAL HIGHWAY	LAE1401	0	RECONSTRUCT LONG BEACH BLVD WITH MEDIANS AND IMPROVED DRAINAGE PHASE II FROM IMPERIAL HWY TO TWEEDY BLVD. PHASE III LIMITS ARE LYNWOOD AVE. TO IMPERIAL HWY.	\$4,047
LOS ANGELES	LOCAL HIGHWAY	LAF1534	0	BIKE TECHNOLOGY DEMONSTRATION. PROJECT WILL CONSIST OF DESIGN, INSTALLATION AND EVALUATION OF SEVERAL BICYCLE TECHNOLOGIES, INCLUDING BICYCLE ACTIVATED DETECTION AT INTERSECTIONS, BIKE BOXES, AND BIKE PARKING.	\$399
LOS ANGELES	LOCAL HIGHWAY	LA0F062	0	DESIGN AND CONST. OF REAL-TIME PARKING INF./GUIDANCE SYSTEM. PHASE II COVERS DOWNTOWN SANTA MONICA AREA, BOUNDED BY PICO BLVD., OCEAN AVE., WILSHIRE BLVD. AND LINCOLN BLVD.	\$700
LOS ANGELES	LOCAL HIGHWAY	LA06755	0	NEWHALL RANCH ROAD BRIDGE WIDENING OVER THE SAN FRANCISCO CREEK 6 TO 8 LANES. FROM MCBEAN PKWY TO AVENUE TIBBITTS. BRIDGE NO. 53C2164	\$12,981
LOS ANGELES	LOCAL HIGHWAY	LAF3503	0	LONG BEACH SOUTH WATERFRONT BIKE PATH GAP CLOSURE. THE SOUTH WATERFRONT BIKE PATH CONNECTION PROPOSES A MAIN GAP-CLOSURE TO LONG BEACH'S PRIMARY BIKEWAY NETWORK. THIS CLASS I PATH INCLUDES A MID-BLOCK CROSSING AND WAYFINDING SIGNS. THE PROPOSED SOUTH WATERFRONT BIKE PATH STARTS AT THE NORTH END OF THE QUEENSWAY BRIDGE AT THE EXISTING TERMINUS OF THE CLASS I PATH, BIKE PATH DISTANCE .50 MILES.	\$885
LOS ANGELES	LOCAL HIGHWAY	LAF3501	0	DETECTION OF BICYCLES AT SIGNAL CONTROLLED INTERSECTIONS. BICYCLE DETECTION SYSTEMS AT INTERSECTIONS CONTROLLED BY TRAFFIC SIGNALS ALONG BIKE CORRIDORS. PROJECT CORRIDOR LENGTH IS 15.5 MILES.	\$2,495
LOS ANGELES	LOCAL HIGHWAY	LAE3085	0	WIDEN AND RECONSTRUCT WASHINGTON BOULEVARD FROM WESTERN CITY BOUNDARY AT VERNON (350' WEST OF INDIANA STREET) TO I-5 FREEWAY AT TELEGRAPH RD. WIDEN FROM 2 LANES TO 3 LANES IN EACH DIRECTION, INCREASE TURN RADIUS AND MEDIANS, UPGRADE TRAFFIC SIGNALS AND STREET LIGHTING AND IMPROVE SIDEWALKS.	\$32,000
LOS ANGELES	STATE HIGHWAY	LA06116	1	ROUTE 001: PACIFIC COAST HIGHWAY AND PARALLEL ARTERIALS FROM I-105 TO I-110: SIGNAL SYNCHRONIZATION (EA 30990 PPN0 4800)	\$18,000
LOS ANGELES	STATE HIGHWAY	LA06112	1	PACIFIC COAST HIGHWAY (SR 1) BETWEEN CALLE MAYOR AND JANET LANE. THE PURPOSE OF THIS PROJECT IS TO CONSTRUCT GUARDRAIL, FENCING AND LANDSCAPING THAT COMBINED ENHANCE SAFETY BY REDUCING TRAVEL DELAYS, PRIMARILY CAUSED BY MOTOR VEHICLE COLLISIONS, DRIVER DISTRACTION AND ILLEGAL ROADWAY CROSSING BY HIGH SCHOOL STUDENTS AND OTHER PEDESTRIANS.	\$1,154

County	System	FTIP ID	Route #	Description	Project Cost (\$1,000's)
LOS ANGELES	STATE HIGHWAY	LA06720	1	F46 - PACIFIC COAST HIGHWAY ARTERIAL IMPROVEMENTS FROM ANITA ST. TO PALOS VERDES BLVD. STUDY, DESIGN, OBTAIN RIGHT OF WAY AND CONSTRUCT ROADWAY IMPROVEMENTS, STRIPING/SIGNAL ENHANCEMENTS FOR TURN LANES AND OTHER INTERSECTION IMPROVEMENTS. PROJECT NO. MR31206; FA NO. MOUJMR31206.	\$1,400
LOS ANGELES	STATE HIGHWAY	LA06714	1	F47 - INTERSECTION IMPROVEMENTS ON PACIFIC COAST HWY AT TORRANCE BLVD. DEVELOP PLANS, SPECIFICATIONS AND ESTIMATES FOR A NORTHBOUND RIGHT TURN LANE. PROJECT NO. MR31207; FA NO. MOUJMR31207.	\$585
LOS ANGELES	STATE HIGHWAY	LA06846	1	ON ROUTE 1, FROM ARTESIA BOULEVARD TO ANITA/HERONDO STREETS, WIDEN AND UPGRADE THE INTERSECTIONS BY CONSTRUCTING DEDICATED RIGHT AND LEFT-HAND TURN POCKETS, RESTRIPING, AND RE-SIGNALIZATION ALONG PCH BETWEEN ANITA ST. AND ARTESIA BLVD	\$304
LOS ANGELES	STATE HIGHWAY	LA068080	1	ROUTE 1: MANHATTAN BEACH: ON ROUTE 1 BETWEEN 33RD STREET & ROSECRANS AV; ADD ONE THROUGH LN TO NORTH BOUND SEPULVEDA BLVD. TO WIDEN EXISTING STRUCTURE FROM 6 TO 7 THROUGH LANES PPN0 2947. PROJECT USING \$1,440 OF FEDERAL FUNDS (80%) AND \$360 AGENCY MATCH (20%. PROP. C) IN ENG PHASE.	\$126,774
LOS ANGELES	STATE HIGHWAY	LA06909	1	PACIFIC COAST HIGHWAY INTERSECTION IMPROVEMENTS. THE PROJECT WILL IMPROVE KEY INTERSECTIONS ALONG THE PCH/SR-1 IN THE CITY OF MALIBU TO IMPROVE OPERATIONS AND TRAFFIC FLOW. THE IMPROVEMENTS INCLUDE SIGNAL INSTALLATION, DEDICATED TURN LANES, PROTECTED TURN SIGNALS, FLASHING BEACONS, CROSSWALKS, STRIPING AND CHANNELIZATION.	\$3,300
LOS ANGELES	STATE HIGHWAY	LA06910	1	PACIFIC COAST HIGHWAY REGIONAL TRAFFIC MESSAGE SYSTEMS. THE PROJECT WILL ENABLE THE CITY OF MALIBU AND OTHER AGENCIES TO NOTIFY TRAVELERS OF CRITICAL REGIONAL TRAFFIC AND SAFETY INFORMATION AND FACILITATE TRAFFIC FLOW THROUGHOUT THE REGION. 6 PERMANENT AND 2 MOBILE CHANGEABLE MESSAGE SIGNS WILL BE INSTALLED AT STRATEGIC LOCATIONS ALONG PCH/SR-1 CORRIDOR IN THE CITY OF MALIBU.	\$300
LOS ANGELES	STATE HIGHWAY	LA06956	1	PACIFIC COAST HIGHWAY RAISED MEDIAN CHANNELIZATION FROM WEBB WAY TO CORRAL CANYON ROAD. INSTALL RAISED MEDIANS ON PACIFIC COAST HIGHWAY FOR A DISTANCE OF APPROXIMATELY 4 MILES.	\$3,950
LOS ANGELES	STATE HIGHWAY	LA06905	1	THE PACIFIC COAST HIGHWAY AND KANAN DUME ROAD INTERSECTION AND ARRESTER BED IMPROVEMENTS. THE PROJECT WILL IMPROVE AND CHANNELIZE THE INTERSECTION OF PCH/SR-1 AND THE EXISTING ARRESTER BED THAT EXTENDS ALONG KANAN DUME ROAD (A FEDERAL AIDE ROUTE) NORTH OF THE PCH/SR-1 INTERSECTION. THE IMPROVEMENTS INCLUDE INSTALLING PCH/SR-1 TRAFFIC SIGNAL DETECTORS IN THE ARRESTER BED, EXTENDING THE NUMBER 1 LEFT TURN LANE, REALIGNING, EXTENDING AND UPGRADE THE EXISTING ARRESTER BED.	\$900
LOS ANGELES	STATE HIGHWAY	LA06818	1	ALONG PACIFIC COAST HIGHWAY (SR-1) FROM THE INTERSECTION OF BUSCH DRIVE WESTWARD TO THE CITY/MALIBU LIMITS TO IMPROVE THE EXISTING BIKE ROUTE, INSTALL SAFETY IMPROVEMENTS AND UPGRADE BIKE ROUTE. WORK INCLUDES SIGNAGE, STRIPING, INTERSECTION IMPROVEMENTS, MINOR GRADING AND OVERLAY WORK TO WIDEN THE SHOULDER IN SOME SECTIONS. (EA-21#707)	\$605
LOS ANGELES	STATE HIGHWAY	LA06692	2	ROUTE 002: FROM 0.5 MILES SOUTH OF BRANDEN STREET TO I-5/SR-2 INTERCHANGE - MODIFY TERMINUS, SOUNDWALLS, LANDSCAPING, INSTALLING DETECTOR LOOPS AND RAMP METERS, RESTRIPING (WITH NO LANE ADDITION) AND IMPROVING ARTERIAL STREETS (RESTRIPING-NO INCREASE IN CAPACITY, AND REMOVING & WIDENING SIDEWALK. (EA 206550 = 20551 + 20552 (20552=2055A+2055C), PPN0 26889 = 26889 + 2689A (2689A=2689A+4787) (TOLL CREDITS = LOCAL MATCH)	\$9,329

LOS ANGELES	TRANSIT	LA06591	0	SOFTWARE MODIFICATIONS. PROJECT USING TOLL CREDITS FOR MATCH FOR 5307 FUNDS: \$10 IN FY15	\$550
LOS ANGELES	TRANSIT	LA06592	0	SAFETY & SECURITY EMERGENCY PREPAREDNESS PLANNING..	\$345
LOS ANGELES	TRANSIT	LA06200	0	PREVENTIVE MAINTENANCE (LANCASTER/PALMDALE UZA). ADDED TDC AS FOLLOWS: \$880 IN FY 14/15, \$860 IN FY 15/16, \$930 IN FY 16/17, AND \$954 IN FY 17/18 TO MATCH FTA 5307 FOR CON.	\$4,157
LOS ANGELES	TRANSIT	LA50300	0	OPERATING ASSISTANCE - TRANSIT OPERATIONS AND DIAL-A-RIDE SERVICE	\$3,240
LOS ANGELES	TRANSIT	LA06871	0	CABRILLO MOLE FERRY TERMINAL REHABILITATION PROJECT. LOCATED IN SANTA CATALINA ISLAND. PROJECT IS FOR REHABILITATION OF THE FERRY STRUCTURE AND TO ADD NEW SHELTERS FOR PASSENGERS. NONE CAPACITY TYPE PROJECT.	\$3,005
LOS ANGELES	TRANSIT	LAF7406	0	AVALON CLEAN FUEL FLEET REPLACEMENT PROJECT; PROCURES (3) 22 FT CLEAN FUEL BUSES TO REPLACE (3) EXISTING 30 FT TROLLEY-STYLE GASOLINE BUSES.	\$1,275
LOS ANGELES	TRANSIT	LAF3434	0	AZUSA INTERMODAL TRANSIT CENTER. CONSTRUCT REGIONAL AZUSA INTERMODAL TRANSIT CENTER TO ACCOMMODATE EXISTING AND FUTURE PARKING DEMAND AND SUPPORT EFFECTIVE TRANSIT USE. PARK 'N RIDE, THE STRUCTURE WOULD BE LOCATED ON THE SOUTHEAST QUADRANT OF ALAMEDA AVE./ SANTA FE -- 5TH PARKING SPACES. THIS PROJECT IS SPLIT FROM LA0831.	\$7,490
LOS ANGELES	TRANSIT	LA06178	0	EXPANSION OF THE CITY'S CIRCULATOR SHUTTLE TO CONNECT TO BUSINESS AND MEDICAL COMMUTERS FROM THE BALDWIN PARK TRANSIT CENTER AND METROLINK STATION TO THE CITY'S MAIN BUSINESS CENTERS; PURCHASE OF 2 CNG BUSES.	\$742
LOS ANGELES	TRANSIT	LAF1654	0	BALDWIN PARK METROLINK PEDESTRIAN OVERCROSSING. CONSTRUCT A PEDESTRIAN OVERCROSSING OVER BOGART AVE AND THE METROLINK LINE TO LINK THE STATION WITH VITAL BUS TRANSFER POINTS AND TO PROVIDE ACCESS TO PARKING OVERFLOW AREAS. (APPROXIMATELY 50' BRIDGE)	\$1810
LOS ANGELES	TRANSIT	LAF3712	0	METROLINK PARKING RESOURCE MANAGEMENT DEMONSTRATION PROJECT. DEMONSTRATION PROJECT PROVIDES COMMUTERS OF METROLINK AND TRANSIT SERVICES WITH A PROACTIVE SYSTEM TO ASSIST IN LOCATING AVAILABLE PARKING WITHIN CITY'S METROLINK STATION VICINITY.	\$266
LOS ANGELES	TRANSIT	LAF7414	0	CLEAN FUEL BUSES FOR THE BALDWIN PARK TRANSIT SERVICE; PROCURES (5) 32 FT CLEAN FUEL BUSES TO REPLACE (5) EXISTING 32 FT DIESEL-POWERED BUSES.	\$1,798
LOS ANGELES	TRANSIT	LA06119	0	PASSENGER BENCHES AND SMALL SHELTERS - PURCHASE AND INSTALL 60 PASSENGER BENCHES AND SMALL SHELTERS THROUGHOUT THE CITY.E2009-BUSP-066. E2010-BUSP-016 FOR \$500,000.	\$1,207
LOS ANGELES	TRANSIT	LAF7408	0	BURBANK TRANSIT VEHICLE REPLACEMENT; PROCURES (6) 35 FT CLEAN FUEL VEHICLES TO REPLACE (6) SMALLER 30 FT BUSES.	\$2,679
LOS ANGELES	TRANSIT	LA000789	0	BURBANK-GLENDALE-PASADENA AIRPORT INTERMODAL GROUND ACCESS LINK FEASIBILITY STUDY; CONDUCT PE, DESIGN OF A LINK BETWEEN THE AIRPORT AND OTHER TRANSPORTATION SERVICES. (CONSTRUCTION IN LA000789A).	\$2,222
LOS ANGELES	TRANSIT	LA000789A	0	BURBANK-GLENDALE-PASADENA AIRPORT INTERMODAL GROUND ACCESS LINK; CONSTRUCTION OF A LINK BETWEEN THE AIRPORT AND OTHER TRANSPORTATION SERVICES, INCLUDING CONSTRUCTION OF A NEW METROLINK STATION AT HOLLYWOOD WAY/SAN FERNANDO ROAD ON THE ANTELOPE VALLEY LINE AND A LINK BETWEEN THE AIRPORT AND OTHER TRANSPORTATION SERVICES. (CONSTRUCTION OF LA000789)	\$4,033
LOS ANGELES	TRANSIT	LA06396	0	CONSTRUCTION OF EMPIRE AREA TRANSIT CENTER NEAR BURBANK AIRPORT - UPGRADE EXIST - REG'L TRANSIT & LAYOVER FACILITY ADJACENT TO THE BURBANK-GLENDALE-PASADENA AIRPORT. WILL FACILITATE TRANSFER OF PASSENGERS TO & FROM MANY GROUND TRANS. SAFTEA-LU 396, E-2009-BUSP-063.	\$1,858
LOS ANGELES	TRANSIT	LA061091	0	OLD TOWN CALABASAS PARK AND RIDE FACILITY, 72 SPACES. PLANNING, DESIGN AND CONSTRUCTION.	\$7,400

TABLE 1 FTIP Projects - Continued

County	System	FTIP ID	Route #	Description	Project Cost (\$1,000's)
LOS ANGELES	TRANSIT	LAF7413	0	BUS REPLACEMENT: PROCURES (2) 32 FT CLEAN FUEL CUTAWAY VEHICLES TO REPLACE (2) SMALLER, HIGH-MILEAGE BUSES IN THE CITY'S SHUTTLE SYSTEM.	\$275
LOS ANGELES	TRANSIT	LAF408	0	CITY OF CERRITOS TRANSIT AMENITIES. IMPLEMENTATION OF THE CITY-WIDE STREET FURNITURE PLAN. THE NEW AMENITIES WILL INCREASE TRANSIT USE BECAUSE THEY WILL SERVE AS A MARKETING TOOL FOR PUBLIC TRANSIT. THE NEW AMENITIES WILL BE VERY VISIBLE AND WILL INCREASE PEDESTRIAN AND POTENTIAL TRANSIT USERS. THIS PLAN IDENTIFIES ALL SHARED BUS STOPS LACKING TRANSIT AMENITIES.	\$320
LOS ANGELES	TRANSIT	LA0C37	0	BUS STOP IMPROVEMENTS: CONSTRUCTION OF PASSENGER SHELTERS AND INFORMATION KIOSKS	\$686
LOS ANGELES	TRANSIT	LA0G1087	0	PURCHASE OF ONE TRANSIT VEHICLE FOR THE NEW 26TH STREET SHUTTLE SERVICE. THIS BUS SERVICE OPERATES FOUR AM AND FOUR PM TRIPS BETWEEN THE METROLINK 26TH STREET STATION ON THE ORANGE COUNTY LINE TO EMPLOYMENT LOCATIONS IN THE CITY OF COMMERCE. TOLL CREDITS - TRANSIT (TDC) OF \$36 WILL BE USED TO MATCH FY15 FEDERAL FUNDS FOR THE CON PHASE	\$74
LOS ANGELES	TRANSIT	LA0G687	0	REHABILITATION OF 26TH STREET METROLINK STATION. WORK WOULD INCLUDE PAINTING, PAVING, UPGRADED LIGHTING, AND MISCELLANEOUS WORK. PROJECT WILL USE TRANSIT DEVELOPMENT CREDITS (TDC) IN THE AMOUNT \$57 FOR CON IN FY14/15. TOLL CREDITS OF \$57 WILL BE USED TO MATCH FY15 FEDERAL FUNDS FOR THE CON PHASE	\$286
LOS ANGELES	TRANSIT	LA0G966	0	THE CITY OF COMMERCE WILL PURCHASE MAINTENANCE EQUIPMENT FOR THE TRANSPORTATION DEPARTMENT INCLUDING A FLUID HANDLING SYSTEM, AIR AND LUBRICATOR DISPENSER SYSTEM, PRESSURE WASHER AND ASSOCIATED CLEANING EQUIPMENT, OIL AND FLUIDS STORAGE TANKS AND ASSOCIATED EQUIPMENT, BRAKE CLEANER MACHINE, WELDER, PLASMA CUTTER, AND TOOLS FOR NEW FLYER BUSES. PROJECT USING \$35 IN TDC IN FY 14/15.	\$75
LOS ANGELES	TRANSIT	LA0G967	0	THE CITY OF COMMERCE WILL PURCHASE ONE (1) CNG-POWERED SERVICE VEHICLE, WHICH WILL BE USED TO SERVICE 11 TRANSIT AND 5 PARATRANSIT VEHICLES. PROJECT USING \$30 TDC IN FY 14/15. THE VEHICLE WOULD REPLACE AN EXISTING SERVICE VEHICLE THAT IS OVER TWENTY YEARS OLD.	\$150
LOS ANGELES	TRANSIT	LA0G971	0	THE CITY OF COMMERCE WILL REHABILITATE TWO NEOPLAN BUSES. ACTIVITIES WILL INCLUDE REPLACEMENT OF WHEEL CHAIR LIFT, INSTALLATION OF BUS WARP, PAINT AND BODY WORK AS NECESSARY, UPGRADE OF ELECTRICAL HARNESS, AND OTHER ITEMS. PROJECT IS USING \$20 IN TDC FOR CON IN FY 14/15.	\$100
LOS ANGELES	TRANSIT	LA0G973	0	THE CITY OF COMMERCE WILL INSTALL AUTOMATIC PASSENGER COUNTERS (APC) AND ASSOCIATED SOFTWARE ON TWELVE (12) TRANSIT BUSES. PROJECT USING \$30 IN TDC.	\$150
LOS ANGELES	TRANSIT	LA0G983	0	THE CITY WILL PURCHASE SPARE PARTS FOR FTA-FUNDED TRANSIT EQUIPMENT. PROJECT USING \$77 TDC IN FY 14/15.	\$385
LOS ANGELES	TRANSIT	LA0G802	0	CULVER CITY BUS STOP IMPROVEMENT PROGRAM. REPLACE AND ADD BUS SHELTER FURNITURE AND CONSTRUCT NEEDED SIDEWALK AND ROADWAY IMPROVEMENTS AT CULVER CITY BUS STOPS. PROJECT WILL USE TOLL CREDITS IN FY 14/15 IN THE AMOUNT OF \$120 AND FY 15/16 IN AMOUNT OF \$480.	\$3,000
LOS ANGELES	TRANSIT	LA0G432	0	REPLACEMENT OF 6 - 30 CNG BUSES FROM THE 2003 FLEET WITH 6 - 40 CNG BUSES.	\$3,606
LOS ANGELES	TRANSIT	LA0G955	0	CNG STATION COMPRESSOR REPLACEMENT PROJECT. PURCHASE AND INSTALLATION OF TWO (2) NEW REPLACEMENT COMPRESSORS FOR THE DEDICATED COMPRESSED NATURAL GAS (CNG) REFUELING STATION AT THE CULVER CITY TRANSPORTATION FACILITY.	\$900
LOS ANGELES	TRANSIT	LA52100	0	CULVER CITY BUS OPERATION ASSISTANCE	\$67,474
LOS ANGELES	TRANSIT	LAF3729	0	REAL-TIME BUS ARRIVAL INFORMATION SYSTEM. DEVELOP & INSTALL ON 60 BUS STOP REAL-TIME BUS ARRIVAL INFORMATION SYSTEM USING INTELLIGENT TRANSPORTATION SYSTEM (ITS) TECHNOLOGY TO DISSEMINATE NEXT BUS INFO TO TRAVELERS. THE PROJECT'S PHYSICAL COMPONENT IS LOCATED AT BUS STOPS AND TRANSIT CENTER WITHIN THE CITY OF CULVER CITY. THE NON-PHYSICAL COMPONENT OF THE PROJECT IS LOCATED ON A WEB SERVER.	\$2,522
LOS ANGELES	TRANSIT	LAF7420	0	EL MONTE CLEAN FUEL BUS REPLACEMENT: REPLACES (6) EXISTING 32-FT BUSES WITH (6) 32-FT CLEAN FUEL BUSES FOR ITS EL MONTE TRANSIT SERVICE.	\$2,267
LOS ANGELES	TRANSIT	LA52603	0	THIS PROJECT PROVIDES FOR THE USE OF FTA 5307 FUNDS FOR REVENUE SERVICE BUS TIRE LEASE. THIS PROJECT ALSO ADDS TDC (TOLL CREDITS) OF \$22 FOR FY 14/15. TOLL CREDITS OF \$22 WILL BE USED TO MATCH FY15 FEDERAL FUNDS FOR THE CON PHASE	\$12
LOS ANGELES	TRANSIT	LA973010	0	BUS SERVICE EQUIPMENT. CHANGING AVAILABLE FUNDING FOR FY15 AND ADDING FY16 INCLUDING TOLL CREDITS (TDC) DUE TO NEED FOR ADDITIONAL BUS EQUIPMENT TO SUPPORT HYBRID DRIVE SYSTEMS. TOLL CREDITS (TDC) OF \$54 WILL BE USED TO MATCH FY15 FEDERAL FUNDS FOR THE CON PHASE, TOLL CREDITS (TDC) OF \$59 WILL BE USED TO MATCH FY16 FEDERAL FUNDS FOR THE CON PHASE	\$567
LOS ANGELES	TRANSIT	LAF404	0	PURCHASE OF SIX ALTERNATIVE FUEL REPLACEMENT BUSES. PROJECT WILL PURCHASE SIX ALTERNATIVE FUEL 40 FOOT TRANSIT BUSES TO REPLACE SIX 1997 MODEL YEAR DIESEL BUSES, INCLUDING ON-BOARD RADIOS.	\$5,100

TABLE 1 FTIP Projects - Continued

County	System	FTIP ID	Route #	Description	Project Cost (\$1,000's)
LOS ANGELES	TRANSIT	LAF3306	0	THIS PROJECT WILL ALLOW GMBL TO IMPLEMENT TRANSIT SIGNAL PRIORITY ALONG ITS LINE 2 TO REDUCE TRANSIT TRAVEL TIMES AND ENHANCE ON TIME PERFORMANCE. SCOPE INCLUDES INSTALLATION OF TRAFFIC SIGNAL PRIORITY EQUIPMENT ALONG THE FOLLOWING STREETS IN THE CITY OF GARDENA: VERMONT AVE FROM EL SEGUNDO BLVD TO 182ND ST; WESTERN AVE FROM EL SEGUNDO BLVD TO CASSIDY ST; 182ND ST FROM NORMANDIE AVE TO THE HARBOR GATEWAY TRANSIT CENTER. THIS WILL INCLUDE UP TO 27 LOCATIONS.	\$1,688
LOS ANGELES	TRANSIT	LAF3405	0	THREE ALTERNATIVE FUEL BUSES FOR SERVICE EXPANSION; PURCHASE THREE ALTERNATIVE FUEL 40-FOOT TRANSIT BUSES FOR SERVICE EXPANSION.	\$2,691
LOS ANGELES	TRANSIT	LAF7405	0	PURCHASE OF ALTERNATIVE FUEL REPLACEMENT BUSES: REPLACES (5) EXISTING 40-FT GAS/ELECTRIC BUSES WITH (5) 40-FT CLEAN FUEL BUSES FOR ITS GARDENA MUNICIPAL BUS LINES (GMBL).	\$4,485
LOS ANGELES	TRANSIT	LA0C8221	0	COMPRESSED NATURAL GAS FUELING AND MAINTENANCE FACILITY; NEW PUMPING STATION WILL ALLOW FOR FLEET EXPANSION, AND REDUCE OPERATING COST.	\$10,900
LOS ANGELES	TRANSIT	LAED212	0	FEASIBILITY STUDY - OF DOWNTOWN STREETCAR PROJECT	\$1,002
LOS ANGELES	TRANSIT	LAF441	0	PURCHASE OF 2-40' REPLACEMENT CNG BUSES FOR THE GLENDALE BEELINE.	\$899
LOS ANGELES	TRANSIT	LAF3430	0	PURCHASE OF EIGHT (8) 40-FOOT LOW FLOOR CNG REPLACEMENT BUSES FOR THE GLENDALE BEELINE TRANSIT SYSTEM.	\$4,000
LOS ANGELES	TRANSIT	LAF3432	0	BEELINE CNG FUELING AND MAINTENANCE FACILITY. THE CONSTRUCTION OF CITY-OWNED MAINTENANCE, OPERATIONS, AND ADMINISTRATIVE FACILITY FOR THE GLENDALE BEELINE TRANSIT SYSTEM AND GLENDALE DIAL-A-RIDE.	\$1,974
LOS ANGELES	TRANSIT	LAF5407	0	PURCHASE OF 6 CNG BUSES (REPLACEMENT) FOR GLENDALE BEELINE SERVICES. THE CITY OF GLENDALE WILL PURCHASE SIX (6) 40-FOOT NEW FLYER LOW FLOOR CNG BUSES TO REPLACE SIX (6) 35-FOOT BUSES FOR ITS BEELINE TRANSIT SYSTEM. THE NEW BUSES HAVE A SEATING CAPACITY OF 40 PASSENGERS PER BUS, WHICH ARE 10 MORE PASSENGERS PER BUS THAN THE OLDER MODELS.	\$3,240
LOS ANGELES	TRANSIT	LAF7430	0	PURCHASE OF CLEAN FUEL BUSES FOR GLENDALE BEELINE: PROCURES (5) 40-FT CLEAN FUEL BUSES TO REPLACE (3) EXISTING 35-FT AND (2) 40-FT OLDER BUSES.	\$2,497
LOS ANGELES	TRANSIT	LAF7407	0	CITY OF LA CANADA-FINTRIDGE BUS REPLACEMENT PROJECT: PROCURES (1) 35-FT CLEAN FUEL VEHICLE FOR ITS SHUTTLE SERVICE TO REPLACE A SMALLER 29-FT VEHICLE.	\$430
LOS ANGELES	TRANSIT	LA0D349	0	PURCHASE EXPANSION BUSES WITH ALTERNATE FUEL (HYBRID/ELECTRIC)	\$600
LOS ANGELES	TRANSIT	LA0D349A	0	REPLACEMENT BUSES - 25FT VANS/BUSES - PURCHASE QTY OF 3 GASOLINE-18 PASSENGER CAPACITY EACH. REPLACEMENT BUSES - 26FT VANS/BUSES - PURCHASE QTY OF 2 GASOLINE-19 PASSENGER CAPACITY EACH.	\$532
LOS ANGELES	TRANSIT	LA0G1039	0	REPLACEMENT BUSES - 25FT VANS/BUSES - PURCHASE QUANTITY OF 3 GASOLINE- 22 PASSENGER CAPACITY EACH. \$40,000 IN FY14/15 TOLL CREDITS APPLIED TO THE PROJECT.	\$200
LOS ANGELES	TRANSIT	LA0G427	0	PURCHASE OF 4 PARATRANSIT REPLACEMENT TRANSIT VEHICLES (GASOLINE).	\$652
LOS ANGELES	TRANSIT	LA0G429	0	PURCHASE AND INSTALLATION OF BIKE RACKS FOR TRANSIT VEHICLES.	\$64
LOS ANGELES	TRANSIT	LA0G601	0	PROJECT INCLUDES PREVENTATIVE MAINTENANCE OF THE LA MIRADA TRANSIT (LMT) FLEET. PREVENTATIVE MAINTENANCE MAY INCLUDE PURCHASES SUCH AS TIRES, LUBRICANTS, OIL AND FUEL FILTERS, AIR CONDITIONING UNIT PARTS, AND GENERAL VEHICLE AND COMPONENT HARDWARE. THE PROJECT ALSO INCLUDES THE PORTION OF THE MECHANICS SALARY RELATED TO PREVENTATIVE MAINTENANCE OF LMT VEHICLES. MOVE PRIOR FUNDS INTO FY11/12. USING TOLL CREDITS IN FY14/15 \$50 AND FY15/16 \$50 IN CONS.	\$750
LOS ANGELES	TRANSIT	LA0G217	0	CNG GARAGE RETROFIT - INCLUDES MAINTENANCE OF COMPRESSED NATURAL GAS VEHICLES AND EQUIPMENT.	\$400
LOS ANGELES	TRANSIT	LAED332	0	LONG BEACH PARK AND RIDE FACILITY AT 3RD STREET AND PACIFIC AVE SOUTH OF THE MTA BLUE LINE PACIFIC STATION. 300 TO 500 SPACE AND INCLUDE RESIDENTIAL AND COMMERCIAL DEVELOPMENT	\$1,002
LOS ANGELES	TRANSIT	LAF7313	0	LONG BEACHS METRO BLUE LINE SIGNAL PRIORITIZATION : (1) ENHANCES TRANSIT SIGNAL PRIORITIES AT 33 SIGNALIZED INTERSECTIONS ALONG METRO BLUE LINE (MBL) ROUTE. (2) IMPROVES LRT RAILROAD CROSSING AT SPRING ST AND METRO BLUE LINE AND (3) UPGRADES BUS SIGNAL PRIORITY CONTROLLERS AT 52 SIGNALIZED INTERSECTIONS ALONG ATLANTIC AVE BETWEEN SR-91 AND OCEAN BLVD. SAFETY TYPE OF PROJECT.	\$1,568
LOS ANGELES	TRANSIT	LA0D362	0	COMPREHENSIVE OPERATIONAL ANALYSIS TRANSIT PLANNING	\$750

TABLE 1 FTIP Projects - Continued

County	System	FTIP ID	Route #	Description	Project Cost (\$1,000's)
LOS ANGELES	TRANSIT	LA06017	0	BUS STOP IMPROVEMENTS/ AMENITIES INCLUDES: THE PURCHASE OF BENCHES, SHELTERS, SIGNAGE, TRASH RECEPTACLES, LANDSCAPING, LIGHTING AND OTHER BUS STOP RELATED AMENITIES. ADDED TRANSIT DEVELOPMENT CREDITS IN FY14/15 IN CONS. FOR \$99, FY15/16 IN CONS. FOR \$64, FY14/15 FTA FUNDS INCLUDES 1% AT PROJECT OF \$356. THE 20% MATCH IS INDICATED IN FY14/15 PC40, \$89.	\$10,847
LOS ANGELES	TRANSIT	LA06024	0	ON-GOING FLEET REPLACEMENT (30, 40 AND ARTICULATED, ADA COMPLIANT, ALTERNATIVE FUEL), ADDED TRANSIT DEVELOPMENT CREDITS IN \$666 IN FY 14/15 FOR CONS AND \$2,096 IN FY15/16 CONS. FOR 5307 FUNDS.	\$82,498
LOS ANGELES	TRANSIT	LA06190	0	THIS PROJECT INCLUDES: REGULAR MAINTENANCE, FACILITY IMPROVEMENTS, INFORMATION SYSTEM EQUIPMENT, SAFETY/SECURITY EQUIPMENT, REPAIRS, COSMETIC RESTORATION AND REPLACING COMPONENTS TO LONG BEACH TRANSIT'S AQUATIC FLEET. TOLL CREDITS OF TRANSIT (TDC) OF \$8 WILL BE USED TO MATCH FY16 FUNDS FOR THE CON PHASE. TOLL CREDITS - TRANSIT (TDC) OF \$8 WILL BE USED TO MATCH FY16 FEDERAL FUNDS FOR THE CON PHASE	\$42
LOS ANGELES	TRANSIT	LA06221	0	THE ON-GOING BUS CAPITAL PROJECT INCLUDES: BUS COMPONENTS, PROJECT ADMINISTRATION, FACILITY/ MAINTENANCE IMPROVEMENTS, INFORMATION SYSTEMS EQUIPMENT, SAFETY/ SECURITY EQUIPMENT, SHOP/OFFICE EQUIPMENT, SUPPORT VEHICLES AND TIRES. ADDED TRANSIT DEVELOPMENT CREDITS IN FY14/15 IN CONS. FOR \$908 IN FY 15/16 IN CONS. FOR \$1,823 TO MATCH 5307 FUNDS.	\$54,334
LOS ANGELES	TRANSIT	LA06222	0	CAPITALIZATION OF PREVENTATIVE MAINTENANCE (EQUIPMENT MAINTENANCE EXPENSES), ADDED TOLL CREDITS IN FY14/15, \$1,065 IN CONS AND IN FY 15/16, \$800 TO MATCH 5307 FUNDS.	\$49,784
LOS ANGELES	TRANSIT	LA06435	0	ON-GOING CAPITALIZATION OF TRAINING AND EDUCATION. IN ADDITION IN CONS., ADDED \$14 IN FY 14/15 AND \$6 IN FY15/16 FOR TRANSIT DEVELOPMENT CREDITS TO MATCH THE 5307 FUNDS.	\$245
LOS ANGELES	TRANSIT	LAF5402	0	LBT FLEET DIVERSIFICATION AND CNG BUS ACQUISITION PROJECT: WILL REPLACE FOUR (4) OF ITS EXISTING 40-FOOT NEW FLYER DIESEL BUSES WITH FOUR (4) 40-FOOT ALTERNATIVE FUEL BUSES (CNG).	\$2,026
LOS ANGELES	TRANSIT	LAF7402	0	LBT CLEAN FUEL BUS REPLACEMENT PROJECT: LONG BEACH TRANSIT (LBT) WILL REPLACE (5) OF ITS EXISTING 40-FT GAS/ELECTRIC BUSES WITH (5) CLEAN FUEL BUSES.	\$2,628
LOS ANGELES	TRANSIT	LAF1414	0	THIRD STREET & LA VERNE AVENUE PARKING LOT, CONSTRUCT A PARKING LOT AT THIRD STREET AND LA VERNE AVENUE TO PROVIDE 87 SPACES INCLUDING 4 ADA COMPLIANT SPACES FOR A PARK AND RIDE LOT FOR METRO GOLD LINE AND OTHER TRANSIT USERS.	\$2,200
LOS ANGELES	TRANSIT	LAF1427	0	HAHN'S TROLLEY AND SHUTTLE TRANSIT VEHICLES; PURCHASE THREE 25 FEET-LONG ALTERNATIVELY-FUELED CUTAWAY BUSES (TWO PRIMARY SERVICE VEHICLES AND ONE SPARE VEHICLE) FOR REPLACEMENT THAT COMPLY WITH THE AMERICANS WITH DISABILITIES ACT (ADA) AND ARE EQUIPPED WITH WHEELCHAIR LIFTS.	\$375
LOS ANGELES	TRANSIT	LAF1511	0	EASTSIDE LIGHT RAIL BIKE INTERFACE PROJECT. PROJECT INCLUDES DESIGN AND CONSTRUCTION OF BIKE ROUTES WITH APPROPRIATE SIGNAGE AND STRIPING TO ACCESS METRO GOLD LINE STATIONS. TOLL CREDITS - LOCAL AND STATE HWY OF \$20 WILL BE USED TO MATCH FY16 FEDERAL FUNDS FOR THE CON PHASE	\$1,861
LOS ANGELES	TRANSIT	LAF5412	0	ARROW HIGHWAY BUS STOP IMPROVEMENT PLAN; IMPLEMENTATION OF A MULTI-JURISDICTIONAL AMENITY ENHANCEMENT TO 10 BUS STOPS ALONG AN 8.5 MILE STRETCH OF ARROW HIGHWAY, BETWEEN THE I-605 FREEWAY AND VALLEY CENTER DR.	\$457
LOS ANGELES	TRANSIT	LAF5413	0	THIS PROJECT INVOLVES PROCUREMENT OF SEVEN (7) 35- FOOT CNG LOW-FLOOR BUSES TO REPLACE SEVEN (7) 30-FOOT PROPANE-POWERED EL DORADO EZ RIDER II BUSES. THESE BUSES WILL BE USED TO RELIEVE OVERCROWDING ON THE EL SOL SHUTTLE SERVICE BY INCREASING CAPACITY FROM 29 SEATED PASSENGERS TO 35 PER BUS.	\$3,211
LOS ANGELES	TRANSIT	LAF5414	0	THE PROJECT INVOLVES PURCHASE OF (2) 35-FOOT CNG BUSES TO REPLACE TWO (2) 30-FOOT PROPANE-POWERED EL DORADO EZ RIDER II BUSES. THESE BUSES WILL BE USED TO RELIEVE OVERCROWDING ON THE AVOCADO HEIGHTS/BASSETT/WEST VALINDA SHUTTLE AND THE EAST VALINDA SHUTTLE SERVICES. THE NEW VEHICLES WILL MEET ALL ADA REQUIREMENTS WHILE INCREASING CAPACITY FROM 29 SEATED PASSENGERS TO 35 PER BUS.	\$823
LOS ANGELES	TRANSIT	LAF7410	0	FLORENCE-FIRESTONE/WALNUT PARK TRANSIT VEHICLES; PROCURES (2) 35-FT CLEAN FUEL VEHICLES TO REPLACE (2) 25-FT GASOLINE-POWERED CUTAWAY BUSES.	\$888
LOS ANGELES	TRANSIT	LAF7412	0	LOS ANGELES COUNTY/USC MEDICAL CENTER TRANSIT VEHICLE; PROCURES (1) 30-FT CLEAN FUEL VEHICLE FOR ITS NEW LOS ANGELES COUNTY/USC MEDICAL CENTER FIXED-ROUTE SHUTTLE SERVICE.	\$371

TABLE 1 FTIP Projects - Continued

County	System	FTIP ID	Route #	Description	Project Cost (\$1,000's)
LOS ANGELES	TRANSIT	LA07700	0	WILLOWBROOK INTERACTIVE INFORMATION KIOSKS : PROVIDES INFORMATION TO PUBLIC TRANSIT USERS BY INSTALLING 3 INTERACTIVE KIOSKS DISPLAYING TRANSIT, NEIGHBORHOOD, AND CULTURAL INFORMATION. THE PROJECT WILL SERVE THE WILLOWBROOK AREA AT MARTIN LUTHER KING, JR. HOSPITAL, KENNETH HAHN PLAZA, AND THE METRO WILLOWBROOK/ROSA PARKS BLUE AND GREEN LINE STATION.	\$286
LOS ANGELES	TRANSIT	LA07701	0	EAST LOS ANGELES DEMONSTRATION BICYCLE SHARING PROGRAM : INSTALLS 15 BIKE STATIONS WITH 150 BIKES AT VARIOUS TRANSIT STOPS AND ACTIVITY NODES TO IMPROVE BICYCLE ACCESS AND PUBLIC TRANSIT SERVICE. THIS PILOT BIKE SHARING PROJECT WILL SERVE EAST LOS ANGELES AT EAST LOS ANGELES CIVIC CENTER, CALIFORNIA STATE UNIVERSITY, LOS ANGELES, EAST LOS ANGELES COLLEGE AND THE ATLANTIC GOLD LINE STATION.	\$15,525
LOS ANGELES	TRANSIT	LA0C10	0	MID-CITY/EXPOSITION CORRIDOR LIGHT RAIL TRANSIT PROJECT PHASE I TO VENCE-ROBERTSON STATION. (INCLUDING E200-BUSP-095, LA CIENEGA INTERMODAL CENTER)	\$970,975
LOS ANGELES	TRANSIT	LA0C814	0	LA CNTY RIDESHARE SERVICES; PROVIDE COMMUTE INFO, EMPLOYER ASSISTANCE AND INCENTIVE PROGRAMS THROUGH CORE & EMPLOYER RIDESHARE SERVICES & MTA INCENTIVE PROGRAMS. PPN0 9003	\$65,860
LOS ANGELES	TRANSIT	LA0C8413	0	METRO RAPID BUS STATIONS-PHASE II: INCLUDES COMMUNICATIONS & EQUIPMENT - EQUIPMENT AND BUS SHELTERS ONLY.	\$10,000
LOS ANGELES	TRANSIT	LA0D197	0	MID-CITY/EXPOSITION CORRIDOR LRT OPERATING ASSISTANCE	\$109,467
LOS ANGELES	TRANSIT	LA0D198	0	CRENSHAW/LAX TRANSIT CORRIDOR - THE CRENSHAW/LAX TRANSIT CORRIDOR PROJECT IS AN 8.5-MILE LIGHT RAIL TRANSIT (LRT) LINE EXTENDING FROM THE INTERSECTION OF CRENSHAW AND EXPOSITION BOULEVARDS ALLOWING FOR TRANSFER TO THE EXPOSITION LIGHT RAIL TRANSIT LINE TO A CONNECTION WITH THE METRO GREEN LINE AT THE AVIATION/LAX STATION	\$2,058,000
LOS ANGELES	TRANSIT	LA0D282	0	LANDSCAPE, STREETScape & PASSENGER AMENITY IMPROVEMENTS AT & ADJACENT LOS ANGELES CITY COLLEGE TO IMPROVE PEDESTRIAN MOBILITY & ACCESSIBILITY TO EXISTG MULTIMODAL CONN. (SAFETEA-LU # 223, 2007 CFP #F1641)	\$9,564
LOS ANGELES	TRANSIT	LA0D337	0	TRANSIT ENHANCEMENT ACTIVITIES: 1% FORMULA FUNDS - LOS ANGELES COUNTY	\$40,154
LOS ANGELES	TRANSIT	LA0D356	0	PROVIDE HARDSCAPE, LANDSCAPE AND STREETScape IMPROVEMENTS AT EAST LOS ANGELES COLLEGE TO PROVIDE A OFF-STREET TRANSIT CENTER TO IMPROVE PEDESTRIAN MOBILITY AND MULTI-MODAL	\$3,856
LOS ANGELES	TRANSIT	LA0D357	0	PROVIDE HARDSCAPE, LANDSCAPE AND STREETScape IMPROVEMENTS AT LOS ANGELES TRADE TECHNICAL COLLEGE TO IMPROVE PEDESTRIAN MOBILITY AND MULTI-MODAL TRANSIT CONNECTIONS. SAFETEA-LU # 307, 2007 CFP #F1645.	\$5,925
LOS ANGELES	TRANSIT	LA0D471	0	NEW FREEDOM PROGRAM ADMINISTRATION, OPERATIONS AND CAPITAL FOR UZA 2 AND UZA 123.	\$34,809
LOS ANGELES	TRANSIT	LA0F021	0	EXPOSITION LIGHT RAIL TRANSIT SYSTEM PHASE II - FROM CULVER CITY TO SANTA MONICA	\$1,317,500
LOS ANGELES	TRANSIT	LA0F075	0	LIGHT RAIL TRANSIT FLEET - UP TO 133 NEW CARS SYSTEMWIDE. THESE EXPANSION RAIL CARS WILL BE ASSIGNED TO EXPO II, GOLD LINE FOOTHILL AND VEHICLE REPLACEMENTS.	\$593,425
LOS ANGELES	TRANSIT	LA0G010	0	REGIONAL CONNECTOR - LIGHT RAIL IN TUNNEL ALLOWING THROUGH MOVEMENTS OF TRAINS, BLUE, GOLD, EXPO LINES. FROM ALAMEDA / 1ST STREET TO 7TH STREET/METRO CENTER	\$1,427,132
LOS ANGELES	TRANSIT	LA0G1048	0	ACTION SIDING AND SECOND PLATFORM. LENGTHEN AN EXISTING SIDING WEST OF CP QUARTZ BY APPROX. 4,000 FEET INCLUDING A CROSSOVER, AND ADD A SECOND STATION PLATFORM AT VINCENT GRADE/ ACTION STATION. THE PROJECT WILL PROVIDE BENEFITS TO FREIGHT AND COMMUTER RAIL WITH IMPROVED OVERALL CAPACITY, TRACK OPERATIONS, AND SAFETY ALONG A VITAL SEGMENT OF THE ANTELOPE VALLEY LINE.	\$17,400
LOS ANGELES	TRANSIT	LA0G1049	0	BURBANK BOB HOPE AIRPORT STATION PEDESTRIAN GRADE SEPARATION AND REGIONAL INTERMODAL TRANSPORTATION CENTER CONNECTION. DESIGN AND CONSTRUCT A PEDESTRIAN BRIDGE THAT CONNECTS THE BURBANK BOB HOPE AIRPORT REGIONAL INTERMODAL TRANSPORTATION CENTER AND THE BOB HOPE AIRPORT METROLINK STATION TO PROVIDE A GRADE SEPARATED CROSSING OF EMPIRE AVE. AND THE RAILROAD TRACKS FOR PEDESTRIANS TRAVELING BETWEEN AIRPORT TERMINAL AND THE STATION.	\$17,575
LOS ANGELES	TRANSIT	LA0G1051	0	EXTEND SEVERAL OF THE STUB-END TRACKS IN UNION STATION TO CONNECT WITH EXISTING MAINLINE TRACKS. THE PROJECT WILL SERVE THE EXISTING METROLINK, AMTRAK, AND NEW HIGH SPEED TRAIN PROJECT IN THIS CORRIDOR. IT WILL INCLUDE THE PREPARATION OF AN UPDATED ENVIRONMENTAL REPORT AND CLEARANCE. PREPARATION OF THE P/E DOCUMENTATION, PREPARATION OF FINAL PLANS, SPECIFICATIONS AND ESTIMATES, AND THE CONSTRUCTION OF THE PROJECT.	\$195,200
LOS ANGELES	TRANSIT	LA0G1052	0	METRO PURPLE LINE WESTSIDE SUBWAY EXTENSION SECTION 2 - WILSHIRE/LA CIENEGA TO CENTURY CITY	\$2,477,112

TABLE 1 FTIP Projects - Continued

County	System	FTIP ID	Route #	Description	Project Cost (\$1,000's)
LOS ANGELES	TRANSIT	LA061067	0	THE PROJECT IS A NOISE AND VIBRATION STUDY TO MEASURE EXISTING, AND PREDICT FUTURE NOISE AND VIBRATION LEVELS IN THE NEIGHBORHOODS NEAR THE BNSF RAILWAY LINE.	\$100
LOS ANGELES	TRANSIT	LA061092	0	LONE HILL AVENUE TO CONTROL POINT (CP) WHITE DOUBLE TRACK WITH THE PROPOSED 3.9 MILE PROJECT SEGMENT AN EXISTING SIDING WILL BE LENGTHENED TO PROVIDE 8.1 MILES OF CONTINUOUS DOUBLE TRACK BETWEEN LONE HILL AVE AND CP CENTRAL. THE PROJECT IS CURRENTLY IN THE PAID PHASE.	\$3,000
LOS ANGELES	TRANSIT	LA061093	0	BRANFORD STREET CROSSING IMPROVEMENTS: IMPROVEMENTS TO A CROSSING IN THE SAN FERNANDO VALLEY. THE ENHANCEMENTS INCLUDE: INSTALLATION OF PEDESTRIAN CROSSING GATES, ADDITIONAL WARNING GATES, ROADWAY WIDENING, AND ADVANCED TIMING PREEMPTION.	\$2,850

ORANGE	LOCAL HIGHWAY	ORA112622	0	BROOKHURST ST (600' NORTH OF I-5 TO SR-91), ADD ONE LANE EACH DIRECTION. FROM 4 TO 6 LANE FACILITY WITH RAISED MEDIAN. THE PROJECT WILL INCLUDE SIX-FOOT-WIDE CLASS II BIKEWAYS, TEN-FOOT-WIDE PARKWAYS/SIDEWALKS AND CONCRETE SOUNDWALLS ALONG THE EAST AND/OR WEST SIDES OF BROOKHURST ST. CONSISTENT WITH THE 2012 RTP	\$21,770

TABLE 1 FTIP Projects - Continued

County	System	FTIP ID	Route #	Description	Project Cost (\$1,000's)
ORANGE	LOCAL HIGHWAY	ORA113001	0	ARTIC TO WEST ANAHEIM 4TH DISTRICT BIKEWAY CONNECTOR PROJECT. CONSTRUCT 3.77 MILES OF CLASS II BIKE LANES AND 4.19 MILES OF CLASS III SHARROWS ALONG A CONTINUOUS CORRIDOR TOTALING 7.96 MILES. FROM BALL ROAD AND MAGNOLIA AVENUE TO ARTIC REGIONAL TRANSPORTATION HUB AND THE SANTA ANA RIVER TRAIL.	\$374
ORANGE	LOCAL HIGHWAY	ORA120501	0	BROOKHURST STREET WIDENING FROM S/O BALL ROAD TO N/O KATELLA AVENUE (4-6 LANES)	\$26,480
ORANGE	LOCAL HIGHWAY	ORA131703	0	ANAHEIM COVES NORTHERN EXTENSION. PROJECT WILL CREATE 0.9 MILES OF A CLASS I 10-FOOT-WIDE PAVED BICYCLE TRAIL THAT WILL EXTEND THE CURRENT ANAHEIM COVES TRAIL FROM E. LINCOLN AVENUE TO FRONTERA STREET ALONG THE WEST SIDE OF THE SANTA ANA RIVER. TOLL CREDIT MATCH OF \$95,430.	\$832
ORANGE	LOCAL HIGHWAY	ORA150008	0	IMPROVE AND EXPAND THE SANTA RIVER TRAIL ALONG THE AREA IMMEDIATELY BORDERING THE EASTSIDE OF THE ANAHEIM REGIONAL TRANSPORTATION INTERMODAL CENTER (ARTIC)	\$1,086
ORANGE	LOCAL HIGHWAY	ORA371	0	SANTA ANA RIVER TRAIL-IMPROVE AND EXPAND THE SANTA ANA RIVER TRAIL ALONG THE AREA IMMEDIATELY BOARDING THE EAST SIDE OF THE ANAHEIM REGIONAL TRANSPORTATION INTERMODAL CENTER (ARTIC)	\$736
ORANGE	LOCAL HIGHWAY	ORA113002	0	THE TRACKS AT BREA WILL CONSTRUCT A CLASS I BICYCLE TRAIL AND SEPARATE PEDESTRIAN PATH ALONG THE LOFTUS CHANNEL AND ON A CITY EASEMENT OVER AMERICAN SUZUKI MOTOR CORPORATION'S PROPERTY. THIS SEGMENT OF THE TRAIL WILL BE APPROXIMATELY 3,500 LINEAR FEET AND ENCOMPASS TEN ACRES.	\$951
ORANGE	LOCAL HIGHWAY	ORA131702	0	THE TRACKS AT BREA - SEGMENT 4. CONSTRUCTION OF A CLASS I BICYCLE TRAIL FROM STATE COLLEGE BLVD. RUNNING EAST UNDER THE 57 FREEWAY, CONTINUING SOUTHEAST TOWARDS BIRCH STREET. 3,400 LINEAR FEET. TOLL CREDITS: FY15/16 ATP-MPO CON FOR \$284,915.	\$3,026
ORANGE	LOCAL HIGHWAY	ORA150103	0	THE TRACKS AT BREA SEGMENTS 2 & 3. CONSTRUCTION CLASS I BICYCLE/PEDESTRIAN TRAIL ALONG 1.15 MILE LONG SECTION ON THE TRACKS AT BREA. SEGMENT 2 FROM BREA FLOOD CONTROL CHANNEL TO NORTH BREA BOULEVARD. SEGMENT 3 FROM NORTH BREA BOULEVARD TO STATE COLLEGE BOULEVARD.	\$2,889
ORANGE	LOCAL HIGHWAY	ORA082001	0	HARBOR BLVD - ADAMS AVE. ADD A SECOND SOUTHBOUND RIGHT-TURN LANE. ADD A THIRD EASTBOUND LEFT-TURN LANE.	\$4,314
ORANGE	LOCAL HIGHWAY	ORA113003	0	BICYCLE EDUCATION AT SCHOOLS. BICYCLE SAFETY EDUCATION PROGRAM WILL BE CLASSES FOR SIXTEEN ELEMENTARY SCHOOLS.	\$139
ORANGE	LOCAL HIGHWAY	ORA113004	0	FAIRVIEW MULTIPURPOSE TRAIL IN COSTA MESA THE PROPOSED PROJECT INCLUDES DESIGN AND CONSTRUCTION OF A NEW EIGHT-FOOT WIDE, CONCRETE CLASS I MULTIPURPOSE TRAIL FACILITY FOR A LENGTH OF APPROXIMATELY 5,300 FEET WITHIN THE LIMITS OF FAIRVIEW PARK.	\$1,247
ORANGE	LOCAL HIGHWAY	ORA113005	0	PLACENTIA AVENUE BICYCLE SIGNAL ON PLACENTIA AVENUE WILL PROVIDE A SAFE AND CONTROLLED CROSSING TO CONNECT THE NEW BICYCLE TRAIL RECENTLY CONSTRUCTED ON THE WEST SIDE OF PLACENTIA AVENUE. THIS INSTALLATION WILL BE A TREMENDOUS ASSET TO LINK COMMUTERS TO SANTA ANA RIVER TRAIL.	\$244
ORANGE	LOCAL HIGHWAY	ORA130105	0	BICYCLE RACKS AT CITY FACILITIES	\$39
ORANGE	LOCAL HIGHWAY	ORA130401	0	WIDEN CERRITOS AVENUE EASTBOUND 4 TO 5 LANES. FROM WALKER STREET TO ANGELA AVENUE.	\$378
ORANGE	LOCAL HIGHWAY	ORA131706	0	CERRITOS AVENUE BIKE CORRIDOR IMPROVEMENTS (FROM DENNI STREET TO WALKER STREET) - CONSTRUCT AN OFF-ROAD BIKE PATH TO REPLACE AN EXISTING ON-STREET BIKE ROUTE TO IMPROVE SAFETY AND CONNECTIVITY. CLASS 1 FOR 1MILE. TOLL CREDITS: FY15/16 CMAQ CON FOR \$9,405; FY15/16 ATP-MPO CON FOR \$72,490.	\$714
ORANGE	LOCAL HIGHWAY	ORA131707	0	COAST HIGHWAY CLASS I BIKEWAY/PEDESTRIAN WAY EXTENSION PROJECT PHASE 1 - PROJECT WILL ENCOMPASS THE EXTENSION OF THE TWO WAY BIKEWAY/PEDESTRIAN PATHWAY ALONG COAST HIGHWAY FROM THE CAPISTRANO SURFSIDE INN PEDESTRIAN OVERCROSSING (POC) TO PALISADES DRIVE. CLASS 1 FOR .36 MILES.	\$690
ORANGE	LOCAL HIGHWAY	ORA00809	0	RAYMOND AVE GRADE SEPARATION: CONSTRUCT A GRADE SEPARATION ON RAYMOND AVE AT THE BNSF RR TRACKS. (NON-CAPACITY)	\$112,190
ORANGE	LOCAL HIGHWAY	ORA040602	0	STATE COLLEGE GRADE SEPARATION: CONSTRUCT A GRADE SEPARATION ON STATE COLLEGE BLVD AT THE BNSF RR TRACKS (SANTA FE AVE TO 700 FT SOUTH OF VALENCIA). (NON-CAPACITY)	\$86,004
ORANGE	LOCAL HIGHWAY	ORA113008	0	THE LAKE STREET BICYCLE TREATMENTS AND DOWNTOWN BICYCLE PARK. INSTALL SHARROWS AND BICYCLE SIGNAGE ON LAKE STREET BETWEEN PECAN AVENUE AND ORANGE AVENUE, AND BIKE RACKS ON OR NEARBY MAIN STREET. FOUR SHARROWS ARE PROPOSED ALONG WITH TWO SIGNS, AND APPROXIMATELY 28 BIKE RACKS.	\$47
ORANGE	LOCAL HIGHWAY	ORA120522	0	HUNTINGTON BEACH - ATLANTA AVE WIDENING (FRM HUNTINGTON TO DELEWARE; FRM 2 TO 4 LNS)	\$5,451

TABLE 1 FTIP Projects - Continued

County	System	FTIP ID	Route #	Description	Project Cost (\$1,000's)
ORANGE	LOCAL HIGHWAY	ORA131708	0	UTICA AVENUE BICYCLE BOULEVARD - ADA ACCESSIBILITY, BICYCLE IMPROVEMENTS, AND SIGNAGE.	\$853
ORANGE	LOCAL HIGHWAY	ORA080902	0	PROJECT FEASIBILITY STUDY OF SIX MILES OF NEW ROADWAYS INCLUDING TRABUCO RD, O STREET AND MARINE WAY	\$500
ORANGE	LOCAL HIGHWAY	ORA110602	0	WIDENING OF LAGUNA CANYON / I-405 OVERCROSSING FROM 2 LANES TO 4 LANES	\$10,892
ORANGE	LOCAL HIGHWAY	ORA113009	0	THE PETERS CANYON OFF-STREET BIKEWAY WILL IMPROVE A SEGMENT OF THE BIKEWAY THAT IS 2,150 FEET LONG AND IS LOCATED BETWEEN THE RAILROAD TRACKS AND WALNUT AVENUE; ADJACENT TO THE HARVARD ATHLETIC PARK. THE POLE LIGHTING WILL BE INSTALLED EVERY 70-75 FEET OF THE BIKEWAY; A TOTAL OF 35 POLE LIGHTING WITHIN THE PROJECT SEGMENT.	\$858
ORANGE	LOCAL HIGHWAY	ORA113010	0	THE FREEWAY TRAIL IN IRVINE IS LOCATED NORTH OF THE I-405 FREEWAY AND RUNS PARALLEL TO THE I-405 FREEWAY. THE SEGMENT PROPOSED FOR LIGHTING IMPROVEMENT IS 4,300 FEET LONG AND RUNS FROM THE SAN DIEGO CREEK TO CULVER DRIVE. POLE LIGHTING WILL BE INSTALLED EVERY 70-75 FEET OF BIKEWAY; A TOTAL OF 60 POLE LIGHTING WILL BE INSTALLED WITHIN THE PROJECT SEGMENT.	\$878
ORANGE	LOCAL HIGHWAY	ORA120315	0	IRVINE - SAND CANYON @ I-5 (ADD 3RD AND 4TH NB AND SB THRU LNS ON SND CYN; IMP EB APPROACH ADD 2 LFT TRN LNS, 1 THRU LN, & 1 RT TRN LN)	\$8,441
ORANGE	LOCAL HIGHWAY	ORA120514	0	IRVINE - TRABUCO RD @ SR-133 (ADD NEW ON-RAMPS AND OFF RAMPS AT TRABUCO & SR-133) (PRELIMINARY ENGINEERING/PRE-DESIGN ONLY)	\$106,000
ORANGE	LOCAL HIGHWAY	ORA113011	0	LA HABRA UNION PACIFIC RAILROAD BIKEWAY. ENG FOR UNION PACIFIC RAILROAD RIGHT-OF-WAY BETWEEN LA HABRA WEST CITY LIMITS AND LA HABRA EAST CITY LIMITS. ROW FOR LA HABRA WEST CITY LIMITS TO BEACH BOULEVARD. TOLL CREDIT MATCH: FY15/16 CMAQ CON FOR \$10,552, FY15/16 ATP-MPO CON FOR \$81,235.	\$1,321
ORANGE	LOCAL HIGHWAY	ORA020802	0	SALT CREEK TRAIL ENHANCEMENT PROJECT	\$637
ORANGE	LOCAL HIGHWAY	ORA000173	0	LA PAZ RD (MURILANDS/I-5 TO CHRISANTA DR) WIDENING FROM 4 TO 6 LANES BRIDGE # 55C0215	\$97,416
ORANGE	LOCAL HIGHWAY	ORA082405	0	WIDEN OSO PARKWAY FROM COUNTRY CLUB DRIVE TO INTERSTATE 5 - PROJECT WILL WIDEN BOTH THE EAST BOUND AND WEST BOUND DIRECTIONS FROM THE CURRENT THREE LANES IN EACH DIRECTION TO FOUR LANES IN EACH DIRECTION.	\$11,408
ORANGE	LOCAL HIGHWAY	ORA113013	0	EASTBLUFF DRIVE/FORD ROAD CLASS II BIKE LANE IMPROVEMENT WILL ADD A 1.09 MILE STRIPED BIKE LANE ALONG THE SELECTED PORTION OF EASTBLUFF DRIVE AND CONTINUE IT PAST JAMBOREE ROAD ONTO FORD ROAD.	\$270
ORANGE	LOCAL HIGHWAY	ORA130101	0	NEWPORT BEACH CLASS II BICYCLE LANE (6.237 MILES) AND BICYCLE FACILITIES	\$215
ORANGE	LOCAL HIGHWAY	ORA082401	0	COW CAMP ROAD (4 LANES) FROM ANTONIO TO "I" STREET (SEGMENT 1 OF ANTONIO TO Foothill TRANSPORTATION CORRIDOR)	\$32,320
ORANGE	LOCAL HIGHWAY	ORA113006	0	COYOTE CREEK CLASS I BIKEWAY. MALVERN AVENUE/LA MIRADA BOULEVARD TO HILLSBOROUGH DRIVE FOR A TOTAL LENGTH OF APPROXIMATELY 1.95 MILES.	\$1,521
ORANGE	LOCAL HIGHWAY	ORA120504	0	ORANGE COUNTY - LA PATA AVENUE WIDENING & GAP CLOSURE - ADD 4 LNS (EXISTING LA PATA TERMINUS TO CALLE SALUDA)	\$57,220
ORANGE	LOCAL HIGHWAY	ORA130305	0	LA PATA AVENUE WIDENING & GAP CLOSURE (WIDEN FROM 3 TO 5 LNS (2,700 FT S/O ORTEGA HWY TO RD TERMINUS) PA&ED AND PS&E ONLY (SPLIT FROM ORA120504)	\$10,000
ORANGE	LOCAL HIGHWAY	ORA131705	0	LAMBERT ROAD BIKEWAY PROJECT - THIS PROJECT WILL CONSTRUCT NEW 5-FOOT WIDE CLASS II BIKEWAY LANES ON BOTH DIRECTIONS. CLASS II FOR .44 MILES. TOLL CREDIT MATCH: FY15/16 CMAQ CON FOR \$5,852, FY15/16 ATP-MPO CON FOR \$45,192.	\$445
ORANGE	LOCAL HIGHWAY	ORA020507	0	ORANGE COUNTY COUNCIL OF GOVERNMENTS (OCCOG) - REDUCE ORANGE COUNTY CONGESTION (ROCC) PROGRAM (INCLUDES STUDIES AND PLANNING) CO-LEAD OCTA	\$1,500
ORANGE	LOCAL HIGHWAY	ORA000118	0	SAND CYN RD @ SCRRA TRACKS (BURT RD TO LAGUNA CANYON/OAK CANYON) - RAILROAD GRADE SEPARATION. WIDENS FROM 4 TO 6 LANES. CO LEAD WITH IRVINE	\$64,013
ORANGE	LOCAL HIGHWAY	ORA020823	0	KRAEMER BLVD GRADE SEPARATION: CONSTRUCT A GRADE SEPARATION ON KRAEMER BLVD AT THE BNSF RR TRACKS. ORANGE COUNTY GATEWAY PROJECT. (NON-CAPACITY)	\$66,627
ORANGE	LOCAL HIGHWAY	ORA020824	0	ORANGETHORPE AVE GRADE SEPARATION: CONSTRUCT A GRADE SEPARATION ON ORANGETHORPE AVE AT THE BNSF RR TRACKS. ORANGE COUNTY GATEWAY PROJECT. (NON-CAPACITY)	\$10,495
ORANGE	LOCAL HIGHWAY	ORA020825	0	LAKEVIEW AVE GRADE SEPARATION: CONSTRUCT A GRADE SEPARATION ON LAKEVIEW AVE AT THE BNSF RR TRACKS. ORANGE COUNTY GATEWAY PROJECT. (NON-CAPACITY)	\$95,649

TABLE 1 FTIP Projects - Continued

County	System	FTIP ID	Route #	Description	Project Cost (\$1,000's)
ORANGE	LOCAL HIGHWAY	ORA020826	0	TUSTIN AVE / ROSE DRIVE GRADE SEPARATION; CONSTRUCT A GRADE SEPARATION ON TUSTIN AVE / ROSE DRIVE AT THE BNSF RRR TRACKS. ORANGE COUNTY GATEWAY PROJECT. PHASE I. (NON-CAPACITY)	\$94,271
ORANGE	LOCAL HIGHWAY	ORA02925	0	BNSF RAILWAY LINE (PLACENTIA) ALONG SS OF ORANGETHORPE. GRADE SEPARATION/ CORRIDOR IMPROVEMENTS. (NON-CAPACITY)	\$78,230
ORANGE	LOCAL HIGHWAY	ORA112601	0	I-5/ROUTE 74 INTERCHANGE IMPROVEMENT - LANDSCAPING/REPLACEMENT PLANTING - (PPNO 4102A) (ORA120326 PARENT PROJECT)	\$2,172
ORANGE	LOCAL HIGHWAY	ORA113099	0	GROUPED PROJECTS FOR PAVEMENT RESURFACING AND/OR REHABILITATION. PROJECTS ARE CONSISTENT WITH 40 CFR PART 93.126 EXEMPT TABLES 2 AND TABLES 3 CATEGORIES - PAVEMENT RESURFACING AND/OR REHABILITATION. (SLPP FORMULA GRANT)	\$43,252
ORANGE	LOCAL HIGHWAY	ORA130303	0	STATE COLLEGE GRADE SEPARATION (LOSSAN) - CONSTRUCT AN UNDERCROSSING UNDER THE SCRRRA TRACKS ON STATE COLLEGE BLVD IN THE CITY OF ANAHEIM BETWEEN HOWELL AVE AND KATELLA AVE. (NOT CAPACITY ENHANCING)	\$92,000
ORANGE	LOCAL HIGHWAY	ORA131108	0	2011 CTFP REGIONAL TRAFFIC SIGNAL SYNCHRONIZATION PROGRAM. 102 MILES AND 355 SIGNALIZED INTERSECTIONS ALONG 10 HIGH VOLUME REGIONAL TRAFFIC CORRIDORS.	\$7,600
ORANGE	LOCAL HIGHWAY	ORA131306	0	17TH STREET GRADE SEPARATION (SANTA ANA)-NEW RAIL GRADE SEPARATION ON LOSSAN CORRIDOR (PA&ED PHASE)	\$3,500
ORANGE	LOCAL HIGHWAY	ORA190601	0	PLANNING STUDIES AND PSR'S (SR-55 STUDY 19TH STREET TO INDUSTRIAL WAY IN COSTA MESA)	\$1,130
ORANGE	LOCAL HIGHWAY	ORA131701	0	GOLDEN AVENUE OVER CARBON CANYON CHANNEL - REPLACE 2 TO 4 LANE BRIDGE (BRIDGE # 55C0192)	\$3,087
ORANGE	LOCAL HIGHWAY	ORA113077	0	PACIFIC COAST BIKEWAY ROUTE SIGNAGE AND PARKING EXPANSION IMPROVEMENT PROJECT WILL INSTALL BIKEWAY WAYFINDING SIGNAGE AND ADD BIKEWAY RACKS ALONG THE PACIFIC COAST BIKEWAY ROUTE WITHIN THE CITY OF SAN CLEMENTE.	\$201
ORANGE	LOCAL HIGHWAY	ORA131710	0	SAN JUAN CAPISTRANO BIKEWAY GAP CLOSURE - INCLUDES SEVEN PROJECTS: RANCHO VIEJO ROAD TRAIL TO THE CITY OF MISSION VIEJO'S BIKEWAY SYSTEM FOR .62 OF A MILE, SAN JUAN CREEK ROAD TO COUNTY TRAILS IN THE RANCHO MISSION VIEJO DEVELOPMENT AREA FOR .75 OF A MILE, RANCHO VIEJO ROAD FOR .23 OF A MILE, LA NOVIA AVENUE FOR .21 OF A MILE, CAMINO CAPISTRANO BIKEWAY FOR .8 OF A MILE, DEL OBISPO BIKEWAY FOR .11 OF A MILE, AND ALIPAZ STREET TO SAN JUAN CREEK LEVEE FOR .2 OF A MILE. TOLL CREDIT MATCH: FY15/16 ATP-MPO CON	\$553
ORANGE	LOCAL HIGHWAY	ORA082610	0	SANTA ANA BLVD GRADE SEPARATION -(GARTIO) INITIAL PLANNING AND CONCEPTUAL ENGINEERING PHASE. TO STUDY GRADE SEPARATION OF SANTA ANA BLVD AT OCTA/ METROLINK CROSSING BETWEEN SANTIAGO ST. AND I-5 RAMPS. RELATED TO ORA81621	\$1671
ORANGE	LOCAL HIGHWAY	ORA113018	0	FIRST STREET CLASS II BIKEWAY. CONSTRUCT A .50 MILE SEGMENT OF CLASS II BIKEWAY FROM FIRST STREET FROM HARBOR BOULEVARD TO NEWHOPE AVENUE.	\$143
ORANGE	LOCAL HIGHWAY	ORA113019	0	CHESTNUT AVENUE CLASS II BIKEWAY. CONSTRUCT A .38 MILE SEGMENT OF CHESTNUT AVENUE FROM STANDARD AVENUE TO GRAND AVENUE.	\$429
ORANGE	LOCAL HIGHWAY	ORA113020	0	MAPLE BIKE TRAIL SAFETY ENHANCEMENTS INCLUDES CONSTRUCTING BULB OUTS WITHIN THE EXISTING CURB-TO-CURB STREET WIDTH AT OCCIDENTAL STREET, ST. ANDREWS PLACE AND ST. GERTRUDE PLACE. CLASS 1 BIKEWAY PATH	\$300
ORANGE	LOCAL HIGHWAY	ORA113021	0	NEWHOPE STREET CLASS II BIKEWAY INCLUDES A .74 MILE SEGMENT OF NEWHOPE STREET FROM WESTMINSTER AVENUE TO 5TH STREET. THE PROJECT WILL INCLUDE ASSOCIATED SIGNING/STRIPING, SANDBLASTING, AND BIKEWAY DETECTION.	\$126
ORANGE	LOCAL HIGHWAY	ORA120520	0	SANTA ANA - GRAND AVENUE WIDENING (FRM 1ST TO 4TH; FRM 2 TO 3 LNS)	\$13,537
ORANGE	LOCAL HIGHWAY	ORA120521	0	SANTA ANA - FIRST STREET WIDENING (FRM SUSAN TO FAIRVIEW; FRM 4 TO 6 LNS) BRIDGE 55C0022	\$16,171
ORANGE	LOCAL HIGHWAY	ORA125	0	BRISTOL ST (MEMORY LANE TO 17TH STREET AND 3RD STREET TO ST. ANDREWS PLACE) WIDEN FROM 4 TO 6 LANES. SPLIT PROJECT ORA1500003, ORA1500004, ORA1500005, ORA1500006.	\$75,223
ORANGE	LOCAL HIGHWAY	ORA131709	0	NEWHOPE CIVIC CENTER-GRAND CLASS II BIKE LANE PROJECT- CLASS II 0.45 MILE ON NEWHOPE STREET FROM FIRST STREET TO MCFADDEN AVENUE. CLASS II 0.87 MILE SEGMENT ON CIVIC CENTER DRIVE FROM BRISTOL TO BROADWAY. CLASS II 1.25 MILE SEGMENT ON GRAND AVENUE FROM 21ST STREET TO FAIRHAVEN AVENUE. TOLL CREDITS FY 14/15 CON FOR \$31,349.	\$272
ORANGE	LOCAL HIGHWAY	ORA150003	0	BRISTOL STREET WIDENING FROM WARNER AVENUE TO ST. ANDREW PLACE. WIDEN FROM 4 TO 6 LANES. PHASE IV. SPLIT FROM ORA125	\$12,674
ORANGE	LOCAL HIGHWAY	ORA150004	0	BRISTOL STREET WIDENING FROM CIVIC CENTER DRIVE TO WASHINGTON AVENUE. WIDEN FROM 4 TO 6 LANES. PHASE IIIA. SPLIT FROM ORA125	\$8,169

RIVERSIDE	LOCAL HIGHWAY	RIV110127	0	IN MORENO VALLEY ON GILMAN SPRINGS RD. FROM EUCALYPTUS AVE TO 2,225 FT. S/O VIRGINIA ST.; PAVEMENT RESURFACING, ADJUSTMENT OF UTILITY MANHOLE AND VALVE COVERS, RESETTling SURVEYING MONUMENTS, RECONSTRUCTION OF STORM DRAIN CULVERTS, AND INSTALLATION OF PAVEMENT STRIPING AND MARKERS.	\$800
RIVERSIDE	LOCAL HIGHWAY	RIV110128	0	IN MORENO VALLEY ON HEACOCK ST FROM ALESSANDRO BLVD TO COTTONWOOD AVE.; PAVEMENT RESURFACING, ADJUSTMENT OF UTILITY MANHOLE AND VALVE COVERS, RESETTling SURVEYING MONUMENTS, RECONSTRUCTION OF ACCESS RAMPS TO MEET ADA REQUIREMENTS, AND INSTALLING PAVEMENT STRIPING AND MARKERS.	\$600
RIVERSIDE	LOCAL HIGHWAY	RIV112101	0	IN MORENO VALLEY - NASON ST WIDENING FROM FIR AVE TO ALESSANDRO BLVD. THE PROJECT WILL WIDEN NASON ST FROM 2 TO 4 THROUGH LANES, INCLUDING CURB AND GUTTER, SIDEWALKS, MEDIANS, SIGNAL MODIFICATIONS AND UTILITY WORK.	\$11,200
RIVERSIDE	LOCAL HIGHWAY	RIV130808	0	IN WESTERN RIVERSIDE COUNTY FOR THE CITY OF MORENO VALLEY - GROUPED PROJECTS FOR PAVEMENT RESURFACING AND/OR REHABILITATION - PROJECTS ARE CONSISTENT WITH 40 CFR PART 93.126 EXEMPT TABLES 2 AND TABLE 3 CATEGORIES - PAVEMENT RESURFACING AND/OR REHABILITATION.	\$2,080
RIVERSIDE	LOCAL HIGHWAY	RIV151213	0	IN WESTERN RIVERSIDE COUNTY IN THE CITY OF WILDOMAR - WIDENING OF GRAND AVE (CLINTON KEITH RD TO DAVID BROWN MIDDLE SCHOOL) TO INCLUDE A CLASS II BIKE LANE AND MINIMAL WORK TO INCORPORATE CLASS II/III BIKE LANES ON CLINTON KEITH RD FROM GRAND AVE TO GEORGE AVE. IMPROVEMENTS INCLUDE A TOTAL OF 7,300 LF OF NEW BIKE LANES	\$951
RIVERSIDE	LOCAL HIGHWAY	RIV100102	0	IN WESTERN RIVERSIDE COUNTY IN BEAUMONT: SR79 BYPASS EXT NO. PH II - INSTALL OF A 3-LN PRE-FAB BRIDGES ON THE EASTSIDE OF THE PH I POTRERO BRIDGE SR79 BYPASS EXT. NO., EXTENDING THE POTRERO BLVD 0.675 MI. NO. FROM THE FUTURE SR60/POTRERO FWY IC (RIV050535), TO CONNECT TO THE OAK VALLEY PKWY IN BEAUMONT, INCLUDING THE INSTALL OF A CLASS I MULTI-PURPOSES TRAIL, FLARED INTERSECTION AND TURNING POCKETS.	\$21,846
RIVERSIDE	LOCAL HIGHWAY	RIV140805	0	IN EASTERN RIVERSIDE COUNTY NEAR THE CITY OF BLYTHE - COMPOSITION AND PRINTING OF A BLYTHE AREA OFF HIGHWAY VEHICLE TRAIL MAP	\$29
RIVERSIDE	LOCAL HIGHWAY	RIV060102	0	IN CALIMESA - WIDEN EB COUNTY LN RD FROM 1 TO 2 LNS (I-10 TO 600' E/O CALIMESA BLVD), CONSTRUCT 90 FT. ROUNDABOUT AT INTERSECTION OF CALIMESA BLVD AND COUNTY LN RD. WIDEN ALL ADJACENT CORNERS FOR TRANSITION TO ROUNDABOUT INCLUDING CURB AND GUTTER AS REQUIRED. ADDITIONAL IMPROVEMENTS INCLUDE DRAINAGE AND CONCRETE WORK (SAFETEA-LU-DEMO ID 445, 1316)	\$2,366
RIVERSIDE	LOCAL HIGHWAY	RIV091011	0	IN EASTERN RIVERSIDE COUNTY IN THE COACHELLA VALLEY - DATE PALM DR OVER THE WHITEWATER RIVER; WIDENING OF DATE PALM DR FROM 4 TO 6 LNS (3 LNS IN EA DIR), FROM APPROX. 350 FT S/O THE BRIDGE TO 250 FT N/O THE BRIDGE (VIA ESTRADA TO THE NORTH AND PEREZ RD. TO THE SOUTH), INCLUDING THE CONSTRUCTION OF A RAISED MEDIAN AND SIDEWALK ALONG THE EAST SIDE OF THE PROJECT (BRIDGE NO. 56C0189).	\$18,703
RIVERSIDE	LOCAL HIGHWAY	RIV110501	0	IN EASTERN RIVERSIDE COUNTY IN THE COACHELLA VALLEY - DATE PALM DR WIDENING FROM I-10 TO VARNER RD.; WIDENING OF DATE PALM DR FROM 2 TO 6 LNS (3 LNS IN EA DIR) FROM I-10 TO VARNER RD INCLUDING A BOX CULVERT SPANNING THE LONG CANYON WASH; OTHER IMPROVEMENTS INCLUDE ADDITIONAL TURNING LANES AT INTERSECTION OF DATE PALM DR. & VARNER RD., TRAFFIC SIGNALIZATION, SIDEWALKS, MEDIANS AND BIKE LANES.	\$5,791
RIVERSIDE	LOCAL HIGHWAY	RIV140845	0	IN WESTERN RIVERSIDE CO. FOR THE CITY OF EASTVALE - SRTS AT MULTIPLE SCHOOLS-SIGNALIZED XING & RADAR SPEED DISPLAY; INSTALL A TRAFFIC SIGNAL, RADAR SPEED DISPLAY, CURB & GUTTER, ASPHALT CONCRETE, SIGNS, CROSSWALKS, STRIPING & 10,200 L.F. OF BIKE LANES NEAR EASTVALE, ROSA PARKS, & HARADA ELEM SCHOOLS, RIVER HEIGHTS & RAMIREZ MID SCHOOLS & ROOSEVELT HIGH SCHOOL.	\$479
RIVERSIDE	LOCAL HIGHWAY	RIV151201	0	IN WESTERN RIVERSIDE COUNTY IN THE CITY OF EASTVALE - TRAFFIC SYNCHRONIZATION OF SIX TRAFFIC SIGNALIZED INTERSECTIONS ALONG HAMMER AVENUE FROM SCHLEISMAN ROAD TO EASTVALE GATEWAY	\$384
RIVERSIDE	LOCAL HIGHWAY	RIV071246	0	IN CITY OF COACHELLA - CONSTRUCT NEW (NON-CAPACITY) AVE 52 GRADE SEPARATION OVERHEAD STRUCTURE SPANNING OVER UPRR MAINLINE TRACKS AND GRAPEFRUIT BLVD/HWY 111, FROM SHADY LN TO APPROX 600 FT. E/O INDUSTRIAL WAY/TYLER ST. IMPROVEMENTS INCL: RECONFIG CONNECTION FROM AVE 52 TO GRAPEFRUIT BLVD/HWY 111, BIKE LNS, SIDEWALKS, RETAINING WALLS, RECONSTRUCT TRAFFIC SIGS/DRIVEWAYS, REMOVE EXISTING AT-GRADE CR	\$29,866
RIVERSIDE	LOCAL HIGHWAY	RIV110825	0	IN THE CITY OF COACHELLA - AVE 50 OVER COACHELLA STORMWATER CHANNEL: REPLACEMENT OF A 2-LN LOW WATER X-ING (BRIDGE NO. 00L0055) WITH A 6-LN (3-LNS IN EA DIR) BRIDGE FROM 300-FT W/O APACHE TRAIL TO SR-86S INTERSECTION. OTHER IMPROVEMENTS INCLUDE BIKE LANES/TRAILS, SIDEWALKS, RECONSTRUCT TRAFFIC SIGNAL/DRIVEWAYS, CHANNEL SCOUR PROTECTION, AND REMOVAL OF LOW WATER X-ING AND CULVERTS.	\$29,915
RIVERSIDE	LOCAL HIGHWAY	RIV140816	0	IN EASTERN RIVERSIDE COUNTY FOR THE CITY OF COACHELLA - INSTALL 8.2 MILES OF CLASS II BIKE LANES ON CITY ARTERIALS TO FACILITATE RESIDENTIAL TO COMMERCIAL CONNECTIVITY (\$52.76 OF TC TO MATCH CMAQ IN FY 15/16)(PM 2.5 BENEFITS .816 KG/DAY)	\$320
RIVERSIDE	LOCAL HIGHWAY	RIV140842	0	IN EASTERN RIVERSIDE COUNTY FOR THE CITY OF COACHELLA - ATP IMPROVEMENTS CYCLE 1: ADD 7 MI. OF CLASS II BIKE LANES & CLASS III BIKEWAYS W/ SHARROWS, ASPHALT BIKE PATH, PED XING, & CONSTRUCTION OF 2 MI. OF SIDEWALKS AT DIFFERENT LOCATIONS & LANDSCAPED MEDIANS ALONG AVE 50 & AVE 52 FROM WESTERN CITY LIMITS TO CV LINK. TC USED TO MATCH ATP	\$1,764

TABLE 1 FTIP Projects - Continued

County	System	FTIP ID	Route #	Description	Project Cost (\$1,000's)
RIVERSIDE	LOCAL HIGHWAY	RIV15217	0	IN EASTERN RIVERSIDE COUNTY IN THE CITY OF COACHELLA - WIDENING OF AVENUE 48 FROM 2 TO 6 LANES (1 LN EA DIR TO 3 LNS EA DIR) FROM JACKSON RD TO VAN BUREN ST INCLUDING TRAFFIC SIGNAL MODIFICATIONS, STREET LIGHTING, DRAINAGE IMPROVEMENTS INCLUDING SIDEWALK AND BICYCLE LANES AND LANDSCAPING	\$3,600
RIVERSIDE	LOCAL HIGHWAY	RIV31005	0	IN EASTERN RIVERSIDE COUNTY FOR CVAG. CONSTRUCT IN PHASES A NEW 50 MILE BICYCLE, PEDESTRIAN AND LOW SPEED ELECTRICAL VEHICLE PATH FROM CITY OF DESERT HOT SPRINGS TO THE SALTON SEA ROUGHLY ALONG WHITEWATER RIVER. PH I WILL CONSTRUCT LINK FROM PALM SPRINGS TO COACHELLA. FUTURE PHASES WILL CONSTRUCT LINK FROM DESERT HOT SPRINGS TO PALM SPRINGS AND COACHELLA TO THE SALTON SEA.	\$99,359
RIVERSIDE	LOCAL HIGHWAY	RIV140820	0	IN EASTERN RIVERSIDE COUNTY FOR CVAG. REGIONAL SIGNAL SYNCHRONIZATION PROGRAM THROUGH THE COACHELLA VALLEY INCLUDING BUT NOT LIMITED TO SIGNAL UPGRADES, COMMUNICATION SYSTEMS, HARDWARE AND SOFTWARE.	\$10,828
RIVERSIDE	LOCAL HIGHWAY	RIV010209	0	IN THE CITY OF CORONA - CONSTRUCT FOOTHILL PARKWAY WESTERLY EXTENSION 4 LANE ROAD FROM LINCOLN AVE TO PASEO GRANDE (APPROX 2.5 MILES)	\$67,481
RIVERSIDE	LOCAL HIGHWAY	RIV011240	0	IN CORONA ON EXISTING MCKINLEY ST - CONSTRUCT GRADE SEPARATION AT BNSF RAILROAD CROSSING (PROJECT STUDY REPORT & PRELIMINARY ENVIRONMENTAL ANALYSIS REPORT ACTIVITIES)	\$3,800
RIVERSIDE	LOCAL HIGHWAY	RIV011241	0	IN CORONA ON AUTO CENTER DRIVE - CONSTRUCT 4 LANE OVERCROSSING (GRADE SEPARATION) OVER EXISTING BNSF TRACKS (\$1,240 TOLL CREDITS IN CONST TO MATCH PNRS).	\$32,675
RIVERSIDE	LOCAL HIGHWAY	RIV091001	0	IN THE COACHELLA VALLEY IN THE CITY OF DESERT HOT SPRINGS - INDIAN AVE WIDENING: WIDENING OF INDIAN AVE FROM 2 TO 6 THROUGH LANES (3 IN EA DIR), BETWEEN HWY 62 AND MISSION LAKES BLVD., INCLUDING THE CONSTRUCTION OF AN ALL WEATHER BRIDGE OVER MISSION CREEK (PA&ED).	\$44,000
RIVERSIDE	LOCAL HIGHWAY	RIV130101	0	REHABILITATE APPROXIMATELY 0.5 MILES OF THE PACIFIC COAST TRAIL - FULLERS RIDGE TRAIL BETWEEN SEVEN PINES TRAIL AND DEER SPRINGS TRAIL IN MOUNT SAN JACINTO STATE PARK. CONSTRUCTION ACTIVITIES INCLUDE BRUSHING AND CLEARING, SWITCHBACKS, ARMORING, ROCK RETAINING WALLS, DRAINAGE LENSES, AND TRAIL CONSTRUCTION AND REHABILITATION (PART OF MAP-21 BILL)	\$385
RIVERSIDE	LOCAL HIGHWAY	RIV141202	0	IN WESTERN RIVERSIDE COUNTY FOR THE CITY OF HEMET - GROUPED PROJECTS FOR BICYCLE AND PEDESTRIAN FACILITIES - NON - MOTORIZED: PROJECTS ARE CONSISTENT WITH 40 CFR PART 93.126 EXEMPT TABLES 2 AND TABLE 3 CATEGORIES - BICYCLE AND PEDESTRIAN FACILITIES (BOTH MOTORIZED AND NON-MOTORIZED)	\$3,936
RIVERSIDE	LOCAL HIGHWAY	RIV091006	0	IN EASTERN RIVERSIDE CO. IN THE COACHELLA VALLEY - HWY 111 WIDENING W/IN INDIAN WELLS CITY LIMITS: WIDENING FROM 4 TO 6 THRU LNS (3 LNS IN EA DIR) BTWN THE WCL (570' W/O VILLAGE CTR DR) & EL DORADO DR (RTP ID'S 3A07316 & 3A07257) INCLUDING THE INSTAL OF A RAISED, LANDSCAPE MEDIAN, LEFT TURN PH @ EL DORADO DR, DUAL LEFT TURN PH @ THE SB AND EB COOK ST, RT TURN ONLY LNS AT THE EAST, WEST, AND SB COOK ST.	\$27,788
RIVERSIDE	LOCAL HIGHWAY	RIV091209	0	IN EASTERN RIVERSIDE CO. IN THE COACHELLA VALLEY - HWY 111 WIDENING WITHIN INDIAN WELLS CITY LIMITS: WIDENING FROM 4 TO 6 THRU LNS (3 LNS IN EA DIR) BTWN EL DORADO & EAST CITY LIMITS (W/O WASHINGTON), INCLUDING THE INSTALL OF A RAISED, LANDSCAPE MEDIAN AND RIGHT TURN ONLY LANE AT INDIAN WELLS LN (RTP ID'S 3A07258 & 3A07259).	\$32,779
RIVERSIDE	LOCAL HIGHWAY	RIV091208	0	IN COACHELLA VALLEY IN THE CITY OF INDIO - JACKSON ST TRAFFIC SIGNAL INTERCONNECT AND TRAFFIC SIGNAL INSTALL: INSTALL A NEW TS AT JACKSON ST & MARKET ST/DILLON AVE., & INSTALL OF A WIRELESS INTERCONNECT SYSTEM ON JACKSON ST BTWN AVE. 44 TO THE NO. & AVE. 45 TO THE SO., A DISTANCE OF APPROX. 1 MILE. INTERCONNECT SYSTEM INCLUDES 2 EXIST. TS & 1 NEW TS (\$38 TOLL CREDITS USED FOR CMAQ MATCH IN CONS).	\$367
RIVERSIDE	LOCAL HIGHWAY	RIV111202	0	IN THE CITY OF INDIO - AVE 44 BRIDGE REPLACEMENT: REPLACE EXISTING AVENUE 44 TWO LANE LOW WATER CROSSING OVER THE COACHELLA VALLEY STORMWATER CHANNEL WITH A FOUR LANE BRIDGE (BRIDGE NO. 00LO056), INCLUDING 6 FT SIDEWALK ON EACH SIDE OF THE BRIDGE.	\$19,230
RIVERSIDE	LOCAL HIGHWAY	RIV140819	0	IN EASTERN RIVERSIDE COUNTY FOR THE CITY OF INDIO - FULLY PAVE ABOUT ONE MILE OF UNPAVED CITY ROADS ALONG (4) RESIDENTIAL STREETS IN INDIO, NORTH OF INTERSTATE 10. STREETS TO BE REPAVED ARE: RANCHO LOS CERRITOS DR; PRIMROSE LANE; GALINDO CT; AND SABRINA CT (PM 2.5 BENEFITS 17.92 KG/DAY)	\$1,279
RIVERSIDE	LOCAL HIGHWAY	RIV140848	0	IN EASTERN RIVERSIDE COUNTY IN THE CITY OF INDIO - ANDREW JACKSON ELEM PED IMPROVEMENTS: ON TEN STREETS WITHIN THE ANDREW JACKSON ELEM SCHOOL COMMUNITY, INSTALL SIDEWALKS, UPGRADE PED ACCESS RAMPS AND DRIVEWAY APPROACHES, THREE ENHANCED CROSSWALKS, AND TWO SPEED FEEDBACK SIGNS. TC USED TO MATCH ATP	\$2,581
RIVERSIDE	LOCAL HIGHWAY	RIV151001	0	IN EASTERN RIVERSIDE COUNTY FOR THE CITY OF INDIO - RECONSTRUCT AND IMPROVE HIGHWAY 111 FROM 760 FT WEST OF MADISON ST TO RUBIDOUX ST INCLUDING UPDATING ALL TRAFFIC SIGNALS AND UPDATE ALL SIDEWALKS, RAMPS AND DRIVEWAYS TO CURRENT ADA STANDARDS. WIDEN OF HIGHWAY 111 FROM 4 LANES (2 IN EACH DIR) TO 6 LANES (3 IN EACH DIR).	\$10,920

TABLE 1 FTIP Projects - Continued

County	System	FTIP ID	Route #	Description	Project Cost (\$1,000's)
RIVERSIDE	LOCAL HIGHWAY	RIV21202	0	IN EASTERN RIVERSIDE COUNTY IN THE CITY OF LA QUINTA - ON DUNE PALMS RD; REPLACE 3-LANE LOW WATER CROSSING WITH 4 LANE BRIDGE OVER THE COACHELLA VALLEY STORMWATER CHANNEL, WHITEWATER RIVER - BRIDGE NO.00LO070)	\$17,510
RIVERSIDE	LOCAL HIGHWAY	RIV091005	0	IN MIDWESTERN RIVERSIDE COUNTY IN THE CITY OF LAKE ELSINORE - CONSTRUCTION OF A 6-PHASE TRAFFIC SIGNAL AT THE INTERSECTION OF SR-74 AND GUNNISON AVENUE AND WIDENING OF THE ROUTE TO PROVIDE FOR TWO LEFT TURN LANES.	\$2,450
RIVERSIDE	LOCAL HIGHWAY	RIV11203	0	IN LAKE ELSINORE - TEMESCAL CANYON RD BRIDGE REPLACEMENT/WIDENING; REPLACE TEMESCAL CANYON RD, 2 LANE BRIDGE WITH A 4 LANE BRIDGE OVER TEMESCAL WASH, 0.22 MI. W/O LAKE STREET (BRIDGE NO. 56C00050).	\$19,452
RIVERSIDE	LOCAL HIGHWAY	RIV011210	0	IN MORENO VALLEY/COUNTY - REALIGN RECHE VISTA DR (PERRIS BLVD TO NORTH CITY LIMITS - APPROX. 2,450') & INSTALL SIGNAL (PERRIS/HEACOCK/ RECHE VISTA DR)	\$4,600
RIVERSIDE	LOCAL HIGHWAY	RIV071240	0	IN THE CITY OF MORENO VALLEY - EAST BOUND CACTUS AVE WIDENING BETWEEN VETERANS WAY & HEACOCK; WIDENING OF EAST BOUND CACTUS AVE FROM 2 TO 3 LANES; INCLUDING TRAFFIC SIGNAL MODIFICATIONS WITHIN THE PROJECT REACH, CHANNELIZATION, AND SIGNAL INTERCONNECT SYSTEM (6 SIGNALS).	\$3,241
RIVERSIDE	LOCAL HIGHWAY	RIV080905	0	IN THE CITY OF MORENO VALLEY - WIDEN ALESSANDRO BLVD BETWEEN I-215 AND FREDERICK ST FROM 4 TO 6 LANES.	\$12,401
RIVERSIDE	LOCAL HIGHWAY	RIV080907	0	IN THE CITY OF MORENO VALLEY - WIDEN ALESSANDRO BLVD BETWEEN NASON ST AND GILMAN SPRINGS RD FROM 2 TO 4 LANES; REALIGN ALESSANDRO BLVD WITHIN PROJECT LIMITS BETWEEN THEODORE ST AND GILMAN SPRINGS RD. IMPROVEMENTS INCLUDE MEDIANS, TRAFFIC SIGNALS, CHANNELIZATION, LEFT TURN POCKETS, DEDICATED RIGHT TURN, DRAINAGE, LANDSCAPING, SIDEWALKS, BIKE LANES, AND TRAILS.	\$62,000
RIVERSIDE	LOCAL HIGHWAY	RIV080908	0	IN THE CITY OF MORENO VALLEY - WIDEN GILMAN SPRINGS RD BETWEEN SR-60 AND ALESSANDRO BLVD FROM 2 TO 6 LANES. IMPROVEMENTS INCLUDE MEDIANS, TRAFFIC SIGNALS, CHANNELIZATION, LEFT TURN POCKETS, DEDICATED RIGHT TURN, DRAINAGE, ACCESS ROADS, LANDSCAPING, SIDEWALKS, AND BIKE LANES.	\$41,500
RIVERSIDE	LOCAL HIGHWAY	RIV080909	0	IN THE CITY OF MORENO VALLEY - WIDEN GILMAN SPRINGS RD BETWEEN ALESSANDRO BLVD AND BRIDGE ST FROM 2 TO 6 LANES. IMPROVEMENTS INCLUDE MEDIANS, TRAFFIC SIGNALS, CHANNELIZATION, LEFT TURN POCKETS, DEDICATED RIGHT TURN, DRAINAGE, ACCESS ROADS, LANDSCAPING, SIDEWALKS, AND BIKE LANES.	\$51,000
RIVERSIDE	LOCAL HIGHWAY	RIV080910	0	IN THE CITY OF MORENO VALLEY - WIDEN HEACOCK ST BETWEEN CACTUS AVE AND SAN MICHELE RD FROM 2 TO 4 LANES INCLUDING CURB, GUTTER, SIDEWALK, AND SIGNAL.	\$10,800
RIVERSIDE	LOCAL HIGHWAY	RIV080911	0	IN THE CITY OF MORENO VALLEY - WIDEN HEACOCK ST BETWEEN SAN MICHELE RD AND HARLEY KNOX RD (PERRIS CITY LIMITS), FROM 2 TO 4 LANES; REALIGN HEACOCK ST WITHIN PROJECT LIMITS BETWEEN NANDINA AND OLEANDER; REPLACE BRIDGE OVER PUSD LATERAL B.	\$6,100
RIVERSIDE	LOCAL HIGHWAY	RIV080912	0	IN THE CITY OF MORENO VALLEY - WIDEN BOX SPRINGS RD BETWEEN 500' WEST OF CLARK ST AND DAY ST FROM 2 TO 4 LANES. INCLUDES UTILITY RELOCATION, GRADING, DRAINAGE, CURB, GUTTER, RETAINING WALLS, SIGNAGE, AND STRIPING.	\$3,178
RIVERSIDE	LOCAL HIGHWAY	RIV080915	0	IN THE CITY OF MORENO VALLEY - WIDEN IRONWOOD AVE BETWEEN PERRIS BLVD AND VISTA DE CERROS DR, FROM 2 TO 5 LANES (2 LANES IN EACH DIRECTION AND 1 CENTER TURNING LANE). ADDITIONAL IMPROVEMENTS INCLUDE SIGNAL MODIFICATIONS, LIGHTING, DRAINAGE, CURB, GUTTER, STRIPING, AND SIDEWALK.	\$13,397
RIVERSIDE	LOCAL HIGHWAY	RIV080917	0	IN THE CITY OF MORENO VALLEY - WIDEN MORENO BEACH DR BETWEEN CACTUS AVE AND AUTO MALL DR FROM 2 TO 6 LANES. INCLUDES SIGNALS AT COTTONWOOD AVE, ALESSANDRO BLVD, AND CACTUS AVE.	\$23,000
RIVERSIDE	LOCAL HIGHWAY	RIV080918	0	IN THE CITY OF MORENO VALLEY - WIDEN REDLANDS BLVD BETWEEN SR-60 AND CACTUS AVE FROM 2 TO 4 LANES. IMPROVEMENTS INCLUDE MEDIANS, TRAFFIC SIGNALS, CHANNELIZATION, LEFT TURN POCKETS, DEDICATED RIGHT TURN, DRAINAGE, LANDSCAPING, SIDEWALKS, BIKE LANES, AND TRAILS.	\$18,300
RIVERSIDE	LOCAL HIGHWAY	RIV090908	0	IN MORENO VALLEY, WIDEN THEODORE ST FROM 2 TO 4 LANES FROM ALESSANDRO BLVD TO EUCALYPTUS AVE, INCLUDING TRAFFIC SIGNALS, CHANNELIZATION IMPROVEMENTS, LEFT-TURN POCKETS, DEDICATED RIGHT-TURN LANES, DRAINAGE IMPROVEMENTS, LANDSCAPING, SIDEWALKS, AND BIKE LANES.	\$15,456
RIVERSIDE	LOCAL HIGHWAY	RIV090909	0	IN MORENO VALLEY, WIDEN THEODORE ST FROM 2 TO 4 LANES + 2 AUX LANES FROM EUCALYPTUS AVE TO SR-60 EB RAMPS, INCLUDING MEDIANS, TRAFFIC SIGNALS, CHANNELIZATION IMPROVEMENTS, LEFT-TURN POCKETS, DEDICATED RIGHT-TURN LANES, DRAINAGE IMPROVEMENTS, LANDSCAPING, SIDEWALKS, AND BIKE LANES.	\$4,791

TABLE 1 FTIP Projects - Continued

County	System	FTIP ID	Route #	Description	Project Cost (\$1,000's)
RIVERSIDE	LOCAL HIGHWAY	RIV090910	0	IN MORENO VALLEY, WIDEN THEODORE ST FROM 2 TO 4 LANES FROM SR-60 WB RAMPS TO IRONWOOD AVE, INCLUDING TRAFFIC SIGNALS, CHANNELIZATION IMPROVEMENTS, LEFT-TURN POCKETS, DEDICATED RIGHT-TURN LANES, DRAINAGE IMPROVEMENTS, LANDSCAPING, SIDEWALKS, AND BIKE LANES.	\$4,791
RIVERSIDE	LOCAL HIGHWAY	RIV440849	0	IN WESTERN RIVERSIDE CO. IN THE CITY OF MORENO VALLEY - CITY-WIDE SRTS PED FACILITY IMPROVEMENTS: INSTALL 2,840 FT. OF SIDEWALK GAP CLOSURES, CURBS, GUTTERS, STREET LIGHTS, ADA RAMPS, & STREET WIDENING ON DRACAE AVE, EUCALYPTUS AVE, IRONWOOD AVE, KITCHING ST, SANDY GLADE AVE, AND ELSWORTH ST; NON-INFRASTRUCTURE INCLUDES BIKE/PEDESTAL SAFETY CAMPAIGN & BIKE SAFETY CLASSES. TC USED TO MATCH ATP	\$16,400
RIVERSIDE	LOCAL HIGHWAY	RIV151202	0	IN WESTERN RIVERSIDE COUNTY IN THE CITY OF MORENO VALLEY - DESIGN AND CONSTRUCTION OF ITS, INCLUDING AN ETHERNET FIBER-OPTIC BACKBONE SYSTEM, CCTV CAMERAS AT 26 KEY INTERSECTIONS, AND NEW TRAFFIC SIGNAL CONTROLLERS AT EXISTING 43 SIGNALIZED INTERSECTIONS (CMAQ PM 2.5 BENEFITS: 21 KG/DAY)	\$2,400
RIVERSIDE	LOCAL HIGHWAY	RIV151203	0	IN WESTERN RIVERSIDE COUNTY IN THE CITY OF MORENO VALLEY - INSTALL THREE DYNAMIC MESSAGE SIGNS ALONG ARTERIAL ROUTES APPROACHING INTERSTATE 15 AND STATE ROUTE 60. PROPOSED LOCATIONS INCLUDE: CACTUS AVENUE, ALESSANDRO BOULEVARD AND EUCALYPTUS AVENUE OR DAY STREET.	\$451
RIVERSIDE	LOCAL HIGHWAY	RIV151204	0	IN WESTERN RIVERSIDE COUNTY IN THE CITY OF MORENO VALLEY - DEVELOP PLANS FOR MISSING SEGMENTS OF THE AQUEDUCT TRAIL FOR A CONTINUOUS TRAIL FROM EUCALYPTUS AVENUE TO LAKE PERRIS STATE RECREATIONAL PARK. (PA&ED ONLY)	\$425
RIVERSIDE	LOCAL HIGHWAY	RIV031204	0	IN MURRIETA - CONSTRUCT NEW 2 LANE GUAVA ST. BRIDGE (400') OVER MURRIETA CREEK FROM WASHINGTON AVE TO ADAMS AVE W/ SHOULDERS & ALL REQUIRED APPROACHES (BR#: 56C0162) (\$27,528 TOLL CREDITS UTILIZED FOR R/W IN FY 2010/2011).	\$7,575
RIVERSIDE	LOCAL HIGHWAY	RIV11130	0	IN MURRIETA - WHITEWOOD RD EXTENSION: EXT. OF WHITEWOOD RD FROM JACKSON AVE NO. TO THE INTERSECTION OF MURRIETA HOT SPRINGS RD & WHITEWOOD RD (PA&ED). THE PRECISE LOCATION OF WHITEWOOD RD WILL BE DETERMINED BY AN ALIGNMENT STUDY. THE RD WILL BE IMPROVED TO A 4-LN CROSS-SECTION W/RAISED OR PAINTED MEDIAN (MAJOR ST. DESIGNATION), PROVIDING BETTER TRAFFIC CIRCULATION BTWN TEMECULA & MURRIETA.	\$5,000
RIVERSIDE	LOCAL HIGHWAY	RIV11131	0	IN MURRIETA - KELLER RD. EXTENSION: EXTENSION OF KELLER RD. FROM WHITEWOOD RD (EAST) TO SR79 (WINCHESTER RD). THE PROJECT EXTENSION WILL INCLUDE 4 LANES (2 LNS IN EA DIR), A LEFT TURN LANE, BIKE LANES, AND INSTALLATION OF CURB, GUTTER AND SIDEWALK	\$34,000
RIVERSIDE	LOCAL HIGHWAY	RIV071243	0	IN THE CITY OF PALM DESERT - FREE RIGHT TURN LANE-WB FRED WARING DR TO NB HWY 111; RECONFIGURATION OF A FREE RIGHT TURN LANE AT THE INTERSECTION FROM WEST BOUND FRED WARING DR TO NORTH BOUND HWY 111 (\$61 TOLL CREDITS USED TO MATCH CMAQ IN CONST FY14/15).	\$706
RIVERSIDE	LOCAL HIGHWAY	RIV071255	0	IN THE CITY OF PALM DESERT - MID VALLEY BIKE PATH: CONSTRUCT A 6.5 MILE CLASS 1 BIKE PATH ALONG THE NORTHERN CITY LIMITS BETWEEN S/O WASHINGTON ST. AND N/O MONTEREY AVE.	\$5,800
RIVERSIDE	LOCAL HIGHWAY	RIV031205	0	IN THE CITY OF PALM SPRINGS - WIDEN RAMON RD FROM 4 TO 6 LNS (3 IN EA DIR), FROM EL CIELO RD TO SUNRISE WY., WITH INTERSECTION WIDENING AT EL CIELO RD (ADD WB RT TURN LANE), AT FARRELL DR (ADD SB LEFT TURN LANE), & AT SUNRISE WY (ADD SB LEFT, NB LEFT, AND WB LEFT).	\$4,750
RIVERSIDE	LOCAL HIGHWAY	RIV031206	0	ON S. PALM CANYON DR OVER ARENAS CANYON SOUTH DRAINAGE CHANNEL- REPLACE EXISTING 4 LANE LOW-WATER CROSSING WITH A NEW 4-LANE BRIDGE, INCLUDING DRAINAGE IMPROVEMENTS CONSISTING OF LEVEE CHANNELIZATION (HBR# #: 00L0027).	\$4,875
RIVERSIDE	LOCAL HIGHWAY	RIV071258	0	IN THE CITY OF PALM SPRINGS - TRAFFIC MANAGEMENT CENTER: ADVANCE THE INTERCONNECTED SIGNAL TIMING TO BE UNIFIED CITY-WIDE, COORDINATE THE COMM. EQUIP., BRINGING THEM ALL ONTO THE SAME COMM. PLATFORM FOR THE TRANSMISSION OF COMPLETE DATA & DISSEMINATION OF INFO. TO THE PUBLIC. (\$189 OF TC USED TO MATCH CON IN FY14/15)	\$1869
RIVERSIDE	LOCAL HIGHWAY	RIV090402	0	IN PALM SPGS- PROVIDE ST & SD IMPVTS FOR THE AGUA CALIENTE CULTURAL MUSEUM. IMPVTS INCLUDE: WIDEN HERMOSA DR BTWN TAHQUITZ CANYON WY & ARENAS RD (NON-CAPACITY); CONSTRUCT OFF-SITE PARKING SPACES ALONG E/S OF HERMOSA DR, BTWN TAHQUITZ CANYON WY & ARENAS RD; WIDEN HERMOSA DR TO OP WIDTH BTWN ARENAS & BARISTO RDS (600 FT); & CONSTRUCT SD SYSTEM (LINE 9) EXTEND HERMOSA DR FRM BARISTO CHANNEL TO ARENAS RD.	\$1193
RIVERSIDE	LOCAL HIGHWAY	RIV090405	0	IN THE CITY OF PALM SPRINGS: REPLACE EXISTING 4-LANE LOW WATER CROSSING ON VISTA CHINO AT WHITEWATER RIVER WITH A NEW 4-LANE BRIDGE - BRIDGE NO. 00L0052.	\$95,000
RIVERSIDE	LOCAL HIGHWAY	RIV091205	0	IN COACHELLA VALLEY IN CITY OF PALM SPRINGS - FARRELL DR RIGHT TURN LANE AT VISTA CHINO: CONSTRUCTION OF A SEPARATE RIGHT TURN LANE FOR NB TRAFFIC AT THE INTERSECTION OF FARRELL DR AND VISTA CHINO, INCLUDING RELOCATION AND UPGRADE OF THE TRAFFIC SIGNAL.	\$482

TABLE 1 FTIP Projects - Continued

County	System	FTIP ID	Route #	Description	Project Cost (\$1,000's)
RIVERSIDE	LOCAL HIGHWAY	RIV110124	0	IN THE COACHELLA VALLEY IN THE CITY OF PALM SPRINGS - RAMON RD. WIDENING BETWEEN SAN LUIS REY DR & LANDAU BLVD. - WIDENING OF RAMON RD. FROM A 4-LN ARTERIAL TO A 6-LN ARTERIAL (3-LNS IN EA DIR) BETWEEN SAN LUIS REY DR & LANDAU BLVD., INCLUDING THE WIDENING/REPLACEMENT OF THE WHITEWATER RIVER BRIDGE (BRIDGE NO. 3660287), INCLUDING SEISMIC RETROFIT AND SCOUR COUNTERMEASURES AS NECESSARY.	\$35,401
RIVERSIDE	LOCAL HIGHWAY	RIV20206	0	IN EASTERN RIVERSIDE COUNTY IN PALM SPRINGS - WIDENING OF WEST SAN RAFAEL RD. WIDENING OF WEST SAN RAFAEL RD FROM TWO TO FOUR LANES (2 LANES IN EACH DIRECTION) WITH A CONTINUOUS LEFT TURN LANE FROM N. INDIAN CANYON DR. TO N. VIRGINIA RD.	\$4,500
RIVERSIDE	LOCAL HIGHWAY	RIV40818	0	IN EASTERN RIVERSIDE CO FOR THE CITY OF PALM SPRINGS-CONSTRUCT 9.8 MI. CLASS II & CLASS III BIKE LNS ALONG THE FOLLOWING ST'S: ALONG CROSSLY RD FROM 34TH AVE TO RAMON RD; S PALM CANYON DR FROM MURRAY CANYON DR TO BELARDO RD; SAN RAFAEL DR FROM INDIAN CANYON DR TO SUNRISE WY; INDIAN CANYON DR FROM RACQUET CLUB DR TO SUNRISE PKWY; & VIA ESCUELA FROM SUNRISE WY TO GENE AUTRY TR (PM2.5 BEN. 4.3KG/DAY)	\$475
RIVERSIDE	LOCAL HIGHWAY	RIV990727	0	IN PALM SPRINGS: WIDEN INDIAN CANYON DR FROM 2 TO 6 LANES (3 IN EACH DIRECTION). FROM UPRR OVERCROSSING TO GARNET AVE (HBR#5660025).	\$19,860
RIVERSIDE	LOCAL HIGHWAY	RIV140850	0	IN WESTERN RIVERSIDE CO. IN THE CITY OF PERRIS - MURRIETA RD PED IMPROVEMENTS: INSTALL 1.0 MILE OF SIDEWALK GAPS, CURB & GUTTER ON W-SIDE OF MURRIETA RD W/ CLASS II BIKE LANES IN BOTH DIRECTIONS B/W SAN JACINTO AVE & 1000' NORTH OF NUEVO RD; 10' WIDE BRIDGE OVER METZ FLOOD CONTROL CHANNEL; TRAFFIC SIGNAL AT MURRIETA & NUEVO RDS; NEW SIDEWALK ON DALE ST B/W WILSON & MURRIETA RD. TC TO MATCH ATP	\$1,100
RIVERSIDE	LOCAL HIGHWAY	RIV140851	0	IN WESTERN RIVERSIDE CO. IN THE CITY OF PERRIS - PERRIS VALLEY STORM DRAIN CHANNEL TRAIL: NEW 15-FT WIDE 4.32 MILES OF CONCRETE MULTI-USE TRAIL PARALLEL TO PERRIS VALLEY STORM DRAIN FROM NORTHERN CITY LIMITS TO SAN JACINTO RIVER TRAIL AT KABIAN REGIONAL PARK IN S.WEST CITY LIMITS, INCLUDES LANDSCAPING IRRIGATION, SIGNAGE, CHAIN LINK FENCE AND SPLIT RAIL PVC FENCE. TC USED TO MATCH ATP	\$3,828
RIVERSIDE	LOCAL HIGHWAY	RIV091010	0	IN EASTERN RIVERSIDE COUNTY IN THE COACHELLA VALLEY - MONTEREY AVE WIDENING FROM 4 TO 6 THROUGH LANES (ADDING A 3RD NB & SB THROUGH LANE) FROM HOVLEY LANE WEST TO PARK VIEW DR IN THE CITIES OF RANCHO MIRAGE AND PALM DESERT, INCLUDING TS MODIFICATION, AND SIGNING AND STRIPING IMPROVEMENTS (RTP ID 3A07116 & 3A07128).	\$5,345
RIVERSIDE	LOCAL HIGHWAY	RIV110130	0	IN COACHELLA VALLEY IN RANCHO MIRAGE - WIDENING OF SOUTH BOUND MONTEREY AVE. FROM 2 TO 3 LANES FROM DINAH SHORE DR TO GERALD FORD DR. (APPROX. 3,480 L.F.). OTHER IMPROVEMENTS INCLUDE INSTALLATION OF CURB AND GUTTER, DRAINAGE IMPROVEMENTS (RETENTION BASINS), SIGNING AND STRIPING, AND TRAFFIC SIGNAL MODIFICATION AT GINGER ROGERS RD.	\$1,850
RIVERSIDE	LOCAL HIGHWAY	RIV140814	0	IN EASTERN RIVERSIDE CO FOR THE CITY OF RANCHO MIRAGE-INSTALLATION OF 11,080 L.F. OF FOUR FT. HIGH SAND FENCING ALONG BOB HOPE DR, W/S FROM THE SOUTH END OF AGUA CALIENTE CASINO OVERFLOW PARKING LOT TO DINAH SHORE DR (0.60 MILES) & DINAH SHORE DR, N/S, FROM BOB HOPE DR 1,320 FT. TO THE WEST (0.25 MILES) (PM 2.5 BENEFITS 2.25 KG/DAY)	\$251
RIVERSIDE	LOCAL HIGHWAY	RIV140815	0	IN EASTERN RIVERSIDE CO FOR CITY OF RANCHO MIRAGE-CONSTRUCT FREE RT, PORKCHOP ISLAND & CURB & GUTTER; RELOCATE SIGNAL POLE; REPLACE SIGNAL LOOP; REMOVE & RELOCATE CONCRETE PAVEMENT, SPANDREL, CROSS GUTTER, HANDICAP RAMP & BUS TURNOUT; & INSTALL 15,418 LF OF 4FT. SAND FENCING ALONG RAMON RD FROM LOS ALAMOS RD TO BOB HOPE DR & ALONG DINAH SHORE DR N/S FROM BOB HOPE DR TO MIRIAM WY (PM 2.5 BEN 3.341KG/DAY)	\$966
RIVERSIDE	LOCAL HIGHWAY	RIV011236	0	IN RIV COUNTY & MURRIETA - EXTEND/CONSTRUCT CLINTON KEITH ROAD (3 LANES TOTAL - APPROX 3.4 MILES) WITH 2 BRIDGES FROM ANTELOPE ROAD TO WINCHESTER ROAD (SR79)	\$57,940
RIVERSIDE	LOCAL HIGHWAY	RIV031202	0	I-10 BYPASS SOUTH (FORMERLY RAMSEY ST. EXT.): CONSTRUCT TWO LANES OF ROADWAY TO PROVIDE A BY-PASS/NETWORK FACILITY FOR THE I-10. APPROX. 1/2 MILE S/O I-10 BETWEEN THE EASTERN END OF THE CITY OF BANNING AND APACHE TRAIL IN CABAZON. OTHER IMPROVEMENTS INCLUDE THE CONSTRUCTION OF BRIDGE CROSSINGS AT SMITH CREEK AND SAN GORGONIO RIVER.	\$21,021
RIVERSIDE	LOCAL HIGHWAY	RIV060123	0	IN NORTHWEST RIVERSIDE COUNTY ON CLAY ST FROM APPROX 100' SW OF GENERAL DR TO APPROX 500' N/O LINARES AVE; REPLACE EXISTING 4-LANE (2 LNS IN EACH DIRECTION) AT GRADE R/R X-ING WITH A 4-LN (2 LNS IN EACH DIRECTION - NON-CAPACITY) UNDERCROSSING (UPRR).	\$30,806
RIVERSIDE	LOCAL HIGHWAY	RIV070702	0	NEAR SR60 AND BEAUMONT W/O JCT SR60/I-10: CONSTRUCT NEW 4 LANE (2 LNS EACH DIR) POTRERO BLVD FROM SR 60 SOUTH & EAST TO SR79 (PA&ED/ PRE-DESIGN)	\$800
RIVERSIDE	LOCAL HIGHWAY	RIV071278	0	IN NORTHWEST RIVERSIDE COUNTY ON MAGNOLIA AVE - REPLACE EXISTING 4 LANE (2 LNS IN EA. DIR) R/R X-ING WITH A 4-LN (2 LNS IN EA DIR - NON-CAPACITY) O.C. GRADE SEPARATION ON MAGNOLIA AVE BTWN BUCHANAN AVE. (ON THE EAST) AND LINCOLN STREET (ON THE WEST).	\$51,632
RIVERSIDE	LOCAL HIGHWAY	RIV071285	0	IN THE SOUTH/EAST COACHELLA VALLEY IN EASTERN RIVERSIDE COUNTY, JUST SOUTH OF THE CITY OF COACHELLA ON AVE. 56 (AIRPORT BLVD) - FROM POLK ST TO THE WEST TO ORANGE ST. TO THE EAST OF THE R/R X-ING; REPLACE EXISTING 2 LN (1 LN IN EA DIR) AT GRADE R/R X-ING WITH A 2 LN OC (1 LN IN EA DIR - NON-CAPACITY) ACROSS THE UPRR TRACKS.	\$27,740

TABLE 1 FTIP Projects - Continued

County	System	FTIP ID	Route #	Description	Project Cost (\$1,000's)
RIVERSIDE	LOCAL HIGHWAY	RIV090903	0	IN RIVERSIDE COUNTY ON CA JALCO RD - CA JALCO RD - WIDENING FROM 2 TO 4 THRU LNS (2 IN EA DIR) FROM TEMESCAL CANYON RD TO HARVILL AVE AND FROM 4 TO 6 LANES FROM HARVILL AVE TO I-215, INCLUDING TURN POCKETS AND A BRIDGE RECONSTRUCTION OVER A WATER CROSSING (RTP IDs: 3A04WTT37 AND 3A04WTT38) (PA&ED ONLY) (\$803 IN FY 09/10 AND \$344,011 IN FY 16/17 OF TC USED FOR STPL MATCH IN PA&ED).	\$73,185
RIVERSIDE	LOCAL HIGHWAY	RIV11003	0	IN WESTERN RIVERSIDE COUNTY IN THE CITY OF JURUPA VALLEY - MARKET STREET BRIDGE REPLACEMENT: REPLACE THE EXISTING TWO LANE (ONE LANE IN EACH DIRECTION) MARKET STREET BRIDGE OVER THE SANTA ANA RIVER, 0.4 MILES NORTHWEST OF SR60 WITH A FOUR LANE (TWO LANES IN EACH DIRECTION) BRIDGE. BRIDGE NO. 56C0024	\$40,900
RIVERSIDE	LOCAL HIGHWAY	RIV121203	0	IN EASTERN RIVERSIDE COUNTY IN THE COACHELLA VALLEY - ON AVE 56/AIRPORT DR, REPLACE 2 LANE BRIDGE WITH A 4 LANE BRIDGE OVER WHITEWATER RIVER, 21 MILES E/O HWY 111 (BRIDGE NO.56C0020).	\$15,755
RIVERSIDE	LOCAL HIGHWAY	RIV121204	0	IN WESTERN RIVERSIDE COUNTY IN THE CITY OF NORCO - ON HAMNER AVE OVER SANTA ANA RIVER, 5 MILES N/O OF SIXTH STREET, REPLACE 2 LANE BRIDGE WITH A 6 LANE BRIDGE (BRIDGE NO.56C0446).	\$56,339
RIVERSIDE	LOCAL HIGHWAY	RIV140401	0	IN WESTERN RIVERSIDE COUNTY NEAR THE CITY OF MENIFEE - ON NUEVO ROAD, REHABILITATE AND WIDEN EXISTING 2 LANE BRIDGE TO A 4 LANE BRIDGE OVER SAN JACINTO RIVER 1.2 MILES W/O LAKEVIEW AVENUE. (BRIDGE NO. 56C0004).	\$7,040
RIVERSIDE	LOCAL HIGHWAY	RIV140838	0	IN WESTERN RIVERSIDE CO. FOR THE COUNTY OF RIVERSIDE IN MEAD VALLEY-CLARK ST S/W & INTERSECTION SAFETY IMPROVEMENTS: ON EAST SIDE OF CLARK ST B/W RIDER ST AND CAJALCO RD, CONSTRUCT APPROX. 2,000 L.F. OF CONCRETE SIDEWALK, CURB & GUTTER, PAVEMENT IMPROVEMENTS, NEW CURB RAMPS MEETING LATEST ADA REQS, DRIVEWAY APPROACHES, SIGNS, MARKINGS, & OTHER INCIDENTAL ITEMS TO IMPROVE PEDESTRIAN SAFETY.	\$2,290
RIVERSIDE	LOCAL HIGHWAY	RIV140839	0	IN EASTERN RIVERSIDE CO. FOR THE COUNTY OF RIVERSIDE NEAR DHS-AVENIDA RAMBLA S/W SAFETY IMPROVEMENTS: ON AVENIDA RAMBLA B/W BUBBLING WELLS ELEMENTARY SCHOOL AND CAMINO AVENTURAA AND NORTH SIDE OF CAMINO CAMPESINO B/W AVENIDA RAMBLA AND BUBBLING WELLS RD, CONSTRUCT APPROX. 3,200 L.F. OF SIDEWALK, CURB & GUTTER IMPROVEMENTS, CURB RAMPS, DRIVEWAY APPROACHES, SIGNS, MARKINGS, & OTHER INCIDENTAL ITEMS.	\$356
RIVERSIDE	LOCAL HIGHWAY	RIV140840	0	IN EASTERN RIVERSIDE CO. FOR THE COUNTY OF RIVERSIDE IN MECCA-GRAPEFRUIT BLVD/4TH ST PED & RDWY SAFETY IMPROVEMENTS: ON W/S OF GRAPEFRUIT BLVD B/W 4TH ST & 3,000 FT SOUTH OF 66TH AVE, CONSTRUCT APPROX. 3,500 L.F. OF ASPHALT CONCRETE WALKWAY & 250 L.F. OF CONCRETE S/W, CURB & GUTTER, ADA CURB UPGRADES & WIDENING, TRAFFIC SIGNAL IMPROVEMENTS.	\$2,300
RIVERSIDE	LOCAL HIGHWAY	RIV140846	0	IN WESTERN RIVERSIDE COUNTY FOR THE COUNTY OF RIVERSIDE IN NUEVO-LAKEVIEW AVE S/W SAFETY IMPROVEMENTS: ON LAKEVIEW AVE B/W 10TH ST AND 100-FT NORTH OF 11TH ST, INSTALL 2,600 L.F. OF CONCRETE SIDEWALK, CURB AND GUTTER, PAVEMENT IMPROVEMENTS, ADA COMPLIANT CURB RAMPS, DRIVEWAY APPROACHES, SIGNS AND MARKINGS.	\$878
RIVERSIDE	LOCAL HIGHWAY	RIV140847	0	IN EASTERN RIVERSIDE COUNTY FOR THE COUNTY OF RIVERSIDE IN MECCA - MECCA SIDEWALK & ROADWAY SAFETY IMPROVEMENTS: INSTALL 4,200 L.F. OF CONCRETE SIDEWALK, CURB AND GUTTER, PAVEMENT IMPROVEMENTS, CURB RAMPS, DRIVEWAY APPROACHES, SIGNS AND MARKERS ALONG SIXTH ST., DALE KILLER RD., & BROWN ST.	\$605

County	System	FTIP ID	Route #	Description	Project Cost (\$1,000's)
RIVERSIDE	LOCAL HIGHWAY	RIV041047	0	THROUGHOUT RIVERSIDE COUNTY - GROUPED PROJECTS FOR TRANSPORTATION ENHANCEMENT ACTIVITIES - PROJECTS ARE CONSISTENT WITH 40 CFR PART 93.126 EXEMPT TABLES 2 AND TABLE 3 CATEGORIES - TRANSPORTATION ENHANCEMENT ACTIVITIES (EXCEPT REHABILITATION AND OPERATION OF HISTORIC TRANSPORTATION BUILDINGS, STRUCTURES, OR FACILITIES). \$292 IN TOLL CREDITS WILL BE UTILIZED TO MATCH STPL CONS	\$2,543
RIVERSIDE	LOCAL HIGHWAY	RIV30401	0	THROUGHOUT WESTERN RIVERSIDE COUNTY - GROUPED PROJECTS FOR PAVEMENT RESURFACING AND/OR REHABILITATION - PROJECTS ARE CONSISTENT WITH 40 CFR PART 93.126 EXEMPT TABLES 2 AND TABLE 3 CATEGORIES - PAVEMENT RESURFACING AND/OR REHABILITATION.	\$14,388
RIVERSIDE	LOCAL HIGHWAY	RIV30402	0	THROUGHOUT EASTERN RIVERSIDE COUNTY - GROUPED PROJECTS FOR PAVEMENT RESURFACING AND/OR REHABILITATION - PROJECTS ARE CONSISTENT WITH 40 CFR PART 93.126 EXEMPT TABLES 2 AND TABLE 3 CATEGORIES - PAVEMENT RESURFACING AND/OR REHABILITATION.	\$5,110
RIVERSIDE	LOCAL HIGHWAY	RIV071271	0	IN RIVERSIDE ON STREETER AVENUE: REPLACE EXISTING 4 LANE (2 LNS IN EA DIR) R/R X-ING WITH A 4 LN (2 LNS IN EA DIR - NON-CAPACITY) U.C. GRADE SEPARATION ON STREETER AVE BETWEEN LANTANA STAND BEATTY DR., AND INSTALL APPROX. 1000 FT OF PCC S/W ON EACH SIDE OF STREETER AVENUE WITHIN THE PROJECT LIMITS.	\$36,000
RIVERSIDE	LOCAL HIGHWAY	RIV071272	0	IN RIVERSIDE ON RIVERSIDE AVE: REPLACE EXISTING 4-LANE (2 LNS IN EA DIR) R/R X-ING WITH A 4 LN (2 LNS IN EA DIR - NON-CAPACITY) U.C. G. S. ALONG RIVERSIDE AVE BTWN MERRILL AVE AND 400 FT N/O ELIZABETH ST. ADD IMP INCLUDE INSTALLATION OF APPROX 1100 FT OF PCC S/W ON EACH SIDE OF RIVERSIDE AVE WITHIN THE PROJECT LIMITS (\$791TC IN FY09/10 USED TO MATCH STPL IN R/W)	\$32,154
RIVERSIDE	LOCAL HIGHWAY	RIV071280	0	IN RIVERSIDE ON MARY STREET: REPLACE EXISTING 4 LN (2 LNS IN EA DIR) R/R X-ING WITH A 4 LN (2 LNS IN EA DIR - NON-CAPACITY) U.C. GRADE SEPARATION ON MARY ST BETWEEN MARGUERITE AVE AND INDIANA AVE.	\$38,000
RIVERSIDE	LOCAL HIGHWAY	RIV110116	0	IN RIVERSIDE - QUIET ZONE X-ING IMPROVEMENTS: UPGRADE OF 11 AT-GRADE HWY-RAIL X-INGS & ONE PEDESTRIAN ONLY AT-GRADE X-ING ALONG THE BNSF SAN BERNARDINO SUBD. W/IN THE CITY OF RIVERSIDE. THE IMPROVEMENTS ARE NEEDED TO OPTIMIZE SAFETY AT THE X-INGS AND ALLOW FOR QUIET ZONE TO MITIGATE EXISTING AND PROJECTED TRAIN HORN NOISE IMPACTS.	\$8,000
RIVERSIDE	LOCAL HIGHWAY	RIV11121	0	IN RIVERSIDE ON THIRD STREET: REPLACE EXISTING 4 LANE (2 IN EACH DIRECTION) R/R X-ING WITH A 4-LN (2 LNS IN EA DIR - NON-CAPACITY) U.C. GRADE SEPARATION ON THIRD ST BETWEEN VINE ST AND PARK AVE.	\$28,100
RIVERSIDE	LOCAL HIGHWAY	RIV11208	0	IN RIVERSIDE - MADISON ST GRADE SEPARATION: CONSTRUCT A 4-LN (2 LNS IN EA DIR) NON-CAPACITY ENHANCING MADISON ST/BNSF UNDERPASS BETWEEN INDIANA AVE AND PETERS ST/YSMAEL VILLEGAS ST.	\$38,000
RIVERSIDE	LOCAL HIGHWAY	RIV40641	0	IN WESTERN RIVERSIDE COUNTY FOR CITY OF RIVERSIDE-IOWA AVE & MLK BLVD BIKE IMPROVEMENTS: CONSTRUCT 0.8 MI/10 FT WIDE TWO DIR MULTI-USE PATH ON INSIDE OF MLK BLVD B/W CANYON CREST DR & CHICAGO AVE & WIDENING IOWA AVE B/W MLK BLVD & EVERTON PL INCLUDES GRADING, ASPHALT PAVING, SIGNS & RESTRIPING & INSTALL 6 FT CLASS II BIKE LNS FOR 0.8 MI WITH 2 FT BUFFERS	\$332
RIVERSIDE	LOCAL HIGHWAY	RIV40643	0	IN WESTERN RIVERSIDE COUNTY IN THE CITY OF RIVERSIDE-WELLS/ARLANZA SIDEWALK IMPROVEMENTS: INSTALL ADA RAMPS, DRIVEWAY APPROACHES & 32,730 SQ FT OF SIDEWALK ON ONE SIDE OF FIVE STREETS (CHALLENGER AVE, IVANHOE AVE, KENT AVE, RUTLAND AVE, BABB AVE) SURROUNDING WELLS MIDDLE SCHOOL AND ARLANZA ELEMENTARY SCHOOL. TC USED TO MATCH ATP FUNDS	\$1961
RIVERSIDE	LOCAL HIGHWAY	RIV40644	0	IN WESTERN RIVERSIDE CO. IN THE CITY OF RIVERSIDE - NORTE VISTA SIDEWALK IMPROVEMENTS: INSTALL ADA RAMPS, DRIVEWAY APPROACHES & 94,200 SQ.FT. OF SIDEWALK ON ONE SIDE OF FOUR STREETS (GAYLORD ST, JONES AVE, CHADBOURNE AVE, BUSHNELL AVE) NEAR NORTE VISTA HIGH SCHOOL, ROSEMARY KENNEDY ELEMENTARY SCHOOL, AND TWINHILL ELEMENTARY SCHOOL. TC USED TO MATCH ATP	\$2,833
RIVERSIDE	LOCAL HIGHWAY	RIV40852	0	IN WESTERN RIVERSIDE CO. IN THE CITY OF RIVERSIDE - DOWNTOWN & ADJOINING AREAS BICYCLE AND PED IMPROVEMENTS: 17 MILES OF BIKE LANES, 2,500 FT. OF CONNECTING SIDEWALKS, BIKE STATION AT METROLINK, CONNECTIVITY MAP KIOSKS, TWO NEW HAWK SIGNALS, BIKE STAGING AREA, BIKE SHARE TERMINAL, BIKE CORRALS, BIKE BLVD, PEDESTRIAN SIGNALS, WALKING PATH, ALL-WAY STOP CROSSWALK & NEW SIDEWALK.	\$997
RIVERSIDE	LOCAL HIGHWAY	RIV51205	0	IN WESTERN RIVERSIDE COUNTY IN THE CITY OF RIVERSIDE - INSTALL FIBER-OPTIC SIGNAL INTERCONNECT IMPROVEMENTS ON MARKET ST/MAGNOLIA AVE FROM FIRST ST TO BUCHANAN STAND AND INSTALL MISSING CONDUITS ON MAGNOLIA AVE FROM LA SIERRA AVE TO PIERCE ST UPDATING 49 SIGNALIZED INTERSECTIONS	\$1857
RIVERSIDE	LOCAL HIGHWAY	RIV51206	0	IN WESTERN RIVERSIDE COUNTY IN THE CITY OF RIVERSIDE - PRELIMINARY ENGINEERING TO CONSTRUCT A PEDESTRIAN/BICYCLE BRIDGE ACROSS THE SR-91 CONNECTING THE RIVERSIDE METROLINK STATION TO DOWNTOWN AREA (PA&ED ONLY)	\$751
RIVERSIDE	LOCAL HIGHWAY	RIV51207	0	IN WESTERN RIVERSIDE COUNTY IN THE CITY OF RIVERSIDE - CONSTRUCT A NEW 4.3 MILE WALKING PATH ADJACENT TO SANTA ANA RIVER CLASS I BIKE TRAIL FROM MARTHA MCLEAN ANZA NARROWS PARK TO FAIRMOUNT PARK	\$3,250
RIVERSIDE	LOCAL HIGHWAY	RIV51208	0	IN WESTERN RIVERSIDE COUNTY IN THE CITY OF RIVERSIDE - REALIGN AND RECONSTRUCT A PORTION OF THE SANTA ANA RIVER CLASS I BICYCLE TRAIL BEHIND GRASSY TRAIL DRIVE. THE IMPROVEMENTS INCLUDE GRADING, PAVING, STRIPING AND FENCE RELOCATION	\$223

TABLE 1 FTIP Projects - Continued

County	System	FTIP ID	Route #	Description	Project Cost (\$1,000's)
RIVERSIDE	LOCAL HIGHWAY	RIV151209	0	IN WESTERN RIVERSIDE COUNTY IN THE CITY OF RIVERSIDE - INSTALL UP TO FOUR BICYCLE STATIONS AND PROVIDE FORTY BICYCLES. TEN AT EACH STATION, TO IMPLEMENT A BIKE SHARE PROGRAM IN THE VICINITY OF DOWNTOWN RIVERSIDE, RIVERSIDE METROLINK STATION AND UNIVERSITY OF CALIFORNIA IN RIVERSIDE.	\$303
RIVERSIDE	LOCAL HIGHWAY	RIV151215	0	IN WESTERN RIVERSIDE COUNTY IN THE CITY OF RIVERSIDE - CONSTRUCTION OF SIDEWALK ON ONE SIDE OF BRUCE STREET FROM ADAIR AVE TO LAKE AVE. IMPROVEMENTS INCLUDE A TOTAL OF 2,100 LF OF NEW SIDEWALK	\$403
RIVERSIDE	LOCAL HIGHWAY	RIV151216	0	IN WESTERN RIVERSIDE COUNTY IN THE CITY OF RIVERSIDE - WIDENING OF MAGNOLIA AVENUE WITHIN EXISTING R/W FROM 4 TO 6 LANES (2 EA DIR TO 3 EA DIR) FROM BUCHANAN ST TO BANBURY DRIVE.	\$6,331
RIVERSIDE	LOCAL HIGHWAY	RIV120203	0	IN SAN JACINTO - RAMONA EXP WIDENING PH II: RAMONA EXP WIDENING 2 TO 4 LANES (2 LANES IN EACH DIRECTION) BETWEEN EAGLE RD AND LAKE PARK DRIVE/MAIN ST., INCLUDING LEFT TURN OR LANDSCAPED STRIPED MEDIUM, 5-8 FT OF PAVED SHOULDER, DRAINAGE IMPROVEMENTS AND RELOCATION OF TRAFFIC SIGNAL POLES.	\$7,000
RIVERSIDE	LOCAL HIGHWAY	RIV140856	0	IN WESTERN RIVERSIDE CO. IN THE CITY OF SAN JACINTO - SAFE & ACTIVE SAN JACINTO SRTS: INFRASTRUCTURE INCLUDES 33,275 SQ. FT. OF NEW SIDEWALK, 5,215 SQ. FT. OF EXISTING SIDEWALK UPGRADES, 52,800 SQ. FT. OF BIKE TRAILS WITHIN WALKING DISTANCE TO SCHOOLS. NON-INFRASTRUCTURE INCLUDES PED/BIKE SAFETY EDUCATION, SRTS WORKSHOPS, DEVELOPMENT OF SRTS PLANS FOR EACH SCHOOL, AND OUTREACH.	\$989
RIVERSIDE	LOCAL HIGHWAY	991203	0	EXTEND OVERLAND DRIVE (4 LANES) FROM COMMERCE CENTER DRIVE TO AVENIDA ALVARADO/DIAZ ROAD INTERSECTION INCLUDING CONSTRUCTION OF 4 LANE BRIDGE OVER MURRIETA CREEK (TO BE IMPLEMENTED IN PHASES)	\$19,301
RIVERSIDE	LOCAL HIGHWAY	991206	0	BUTTERFIELD STAGE RD EXTENSIONS: EXTEND MURRIETA HOT SPRINGS RD (4 LNS) FROM BUTTERFIELD STAGE RD TO SERAPINA RD; BUTTERFIELD STAGE RD (4 LNS) FROM RANCHO CALIFORNIA RD TO MURRIETA HOT SPRINGS RD; & NICHOLAS RD (4 LNS) FROM BUTTERFIELD STAGE RD. TO CALLE GIRASOL	\$43,536
RIVERSIDE	LOCAL HIGHWAY	RIV060113	0	CONSTRUCT NEW 4 LANE BRIDGE OVER MURRIETA CREEK (PART OF WESTERN BYPASS CORRIDOR) INCLUDING APPROACHES, CURB & GUTTER, SIDEWALKS, & STORM DRAIN FACILITIES	\$10,366
RIVERSIDE	LOCAL HIGHWAY	RIV060114	0	IN SOUTHWEST TEMECULA: DESIGN AND CONSTRUCT 4 LANE WESTERN BYPASS CORRIDOR (PHASE 1) FROM SR79 SOUTH TO RANCHO CALIFORNIA RD	\$13,500
RIVERSIDE	LOCAL HIGHWAY	RIV140301	0	IN WESTERN RIVERSIDE COUNTY FOR THE CITY OF TEMECULA - CONSTRUCT REMAINING ONE MILE MISSING LINK IN THE SANTA GERTRUDIS CREEK RECREATIONAL MULTI-USE PEDESTRIAN AND BICYCLE TRAIL FROM YNEZ ROAD TO MURRIETA CREEK MULTI-PURPOSE TRAIL	\$7,574
RIVERSIDE	LOCAL HIGHWAY	RIV62029	0	IN SOUTHWEST RIVERSIDE COUNTY IN TEMECULA ON TEMECULA PKWY (FORMERLY SR79) AT LA PAZ ST. ACQUIRE LAND, DESIGN AND CONSTRUCT PARK-AND-RIDE LOT - 157 SPACES. OTHER IMPROVEMENTS INCLUDE THE CONSTRUCTION OF TO BICYCLE LOCKERS, PASSENGER LOAD/UNLOAD ZONE AND ADA ACCESSIBLE PARKING.	\$2,364
RIVERSIDE	LOCAL HIGHWAY	RIV151214	0	IN WESTERN RIVERSIDE COUNTY IN THE CITY OF WILDOMAR - WIDENING OF GRAND AVE (CORYDON RD TO DAVID BROWN MIDDLE SCHOOL) TO INCLUDE A CLASS II BIKE LANES. IMPROVEMENTS INCLUDE A TOTAL OF 12,000 LF OF NEW BIKE LANES	\$1,019
RIVERSIDE	LOCAL HIGHWAY	RIV071288	0	IN EASTERN RIVERSIDE CO. IN THE COACHELLA VALLEY - 66TH AVE GRADE SEPARATION: CONSTRUCT A TWO-LN (1-LN IN EA DIR) 66TH AVE ELEVATED STRUCTURE OVER THE UPRR, HAMMOND RD, AND SH-111, FROM WESTERLY OF LINCOLN ST TO JOHNSON ST ON THE EAST IN THE COMMUNITY OF MECCA. ADD IMPROVEMENTS WILL BE CONSTRUCTED TO TIE BACK INTO THE EXISTING ALIGNMENT.	\$25,250
RIVERSIDE	LOCAL HIGHWAY	RIV050201	0	IN RIVERSIDE COUNTY GROUPED PROJECTS FOR BRIDGE REHABILITATION AND RECONSTRUCTION - HBP PROGRAM; PROJECTS ARE CONSISTENT WITH 40 CFR PART 93.126 EXEMPT TABLE 2 CATEGORIES - WIDENING NARROW PAVEMENTS OR RECONSTRUCTING BRIDGES (NO ADDITIONAL TRAVEL LANES). TC USED TO WATCH HBP FUNDS	\$161,197
RIVERSIDE	LOCAL HIGHWAY	RIV060124	0	IN BANNING ON SUNSET AVE AT I-10 FROM S/O RAMSEY ST TO S/O LINCOLN ST: LOWER SUNSET AVE TO CONSTRUCT NEW 4-LANE UC AT UPRR CROSSING (NON-CAPACITY) AND RECONSTRUCT THE I-10 IC RAMPS TO MEET THE NEW STREET GRADE (SAFE TEA-LU CA438; #1261) (EA33471)	\$34,764
RIVERSIDE	STATE HIGHWAY	RIV131201	10	IN RIVERSIDE COUNTY IN THE CITY OF CALIMESA - RECONSTRUCTION OF EXISTING INTERCHANGE AT I-10/COUNTY LINE WITH TWO 90 FT RADIUS ON/OFF RAMP ROUNDABOUTS. EXTENDING 1300 LINEAR FEET FROM COUNTY LINE LANE TO APPROX. 300 FT. W/O CALIMESA BLVD. THE PROJECT WILL INCLUDE RAMP REALIGNMENT FOR ALL FOUR RAMPS WITH MINOR RAMP WIDENING.	\$15,000
RIVERSIDE	STATE HIGHWAY	RIV060117	10	ON I-10/SINGLETON RD (IC: RECONSTRUCT/WIDEN 2 TO 4 THROUGH LANES (WOODHOUSE TO CALIMESA BLVD). RECONSTRUCT/WIDEN RAMPS - EB ENTRY 1 TO 2 LNS W/ HOV PREFERENTIAL LN, WB EXIT 1 TO 3 LNS, ADD EB EXIT RAMP (3 LNS), WB ENTRY RAMP (2 LNS W/ HOV PREFERENTIAL LN), INCLUDE EXTENDED RAMP ACCEL/DECEL LNS, RELOCATE CALIMESA BLVD/SINGLETON RD INTERSECTION, ADD SB EXTENDED DEDICATED RIGHT-TURN LN (EA: OF980)	\$38,400

TABLE 1 FTIP Projects - Continued

County	System	FTIP ID	Route #	Description	Project Cost (\$1,000's)
RIVERSIDE	STATE HIGHWAY	RIV060116	10	I-10/CHERRY VALLEY BLVD IC: REPLACEMENT OF EXISTING CURVED OVERCROSSING WITH TWO 90 FT. RADIUS ON/OFF RAMP ROUNDABOUTS AND WILL EXTEND 1600 LINEAR FEET FROM ROBERTS ROAD (SOUTH) TO APPROXIMATELY 500 FT E/O CALIMESA BLVD. ASSOCIATED PROJECT IMPROVEMENTS INCLUDE REALIGNMENT OF CALIMESA BLVD AND RAMP REALIGNMENT FOR ALL FOUR RAMP WITH MINOR RAMP WIDENING (CMAQ PM 2.5 BENEFITS PROJECT).	\$15,000
RIVERSIDE	STATE HIGHWAY	RIV060115	10	AT I-10/OAK VALLEY PKWY IC: RECONSTRUCT/WIDEN IC FROM 2 TO 6 THROUGH LANES FROM APPROX 500 FT. W/O DESERT LAWN DR TO GOLF CLUB DR, WIDEN RAMPS - EB ENTRY 1 TO 2 LANES, EB & WB EXIT 1 TO 3 LANES, WB ENTRY 1 TO 3 LANES, ADD NEW EB/WB ENTRY LOOP RAMPS (2 LANES), ENTRY RAMPS INCLUDE HOV PREFERENTIAL LANE, AND RAMPS INCLUDE EXTENDED ACCELERATION/DECELERATION LANE (EA: 06280).	\$25,425
RIVERSIDE	STATE HIGHWAY	RIV071251	10	ON I-10 AT APPROX PM 4117: CONSTRUCT NEW DA VALL DR IC (6 LNS) & RAMPS (2 LNS) FROM VARNER RD TO RAMON RD INCLUDING BRIDGE OVER UPRR AND LONG CYN CREEK CHANNEL, ADD EB/WB AUX LANES (DATE PALM DR IC TO DA VALL & DA VALL TO RAMON RD)	\$69,800
RIVERSIDE	STATE HIGHWAY	RIV031209	10	AT I-10/PORTOLA AVE (B/W MONTEREY IC & COOK IC): CONSTRUCT NEW 6 THRU LANE PORTOLA AVE IC FROM DINAH SHORE DR TO VARNER RD & RAMPS (EB EXIT 2 LNS, WB EXIT 3 LNS, EB & WB ENTRY 2 LNS, WB ENTRY LOOP RAMP 2 LNS, ENTRY INCL HOV LN, WIDENING INCLUDES BRIDGE OVER UPRR & RELOCATE/WIDEN VARNER 2 TO 4 LNS, ADD EB/WB AUX LNS (MONTEREY TO PORTOLA AND PORTOLA TO COOK), EXTEND 4TH WB LANE COOK TO PORTOLA (EA)	\$71,993
RIVERSIDE	STATE HIGHWAY	47520	10	AT I-10/JEFFERSON ST IC: RECONSTRUCT, REALIGN, & WIDEN IC 2 TO 6 LANES (SOUTHERLY OF VARNER RD TO UPRR), WIDEN RAMPS, ADD NEW ENTRY RAMPS, INCLUDING RAMP METERING (NO HOV PREFERENTIAL LANE INCLUDED), ADD ACCEL/DECEL LANES AT WB ENTRY AND EB EXIT (<1/4 MILE), AND ADD DEDICATED RIGHT-TURN LANES. (EA: 47520)	\$60,967
RIVERSIDE	STATE HIGHWAY	RIV071254	10	ON I-10 IN INDIO AT MONROE ST IC: RECONSTRUCT/WIDEN IC FROM 2 TO 6 THROUGH LANES INCLUDING BRIDGE OVER WHITEWATER RIVER CHANNEL FROM AVENUE 42 TO S/O WHITEWATER RIVER CHANNEL, RECONSTRUCT/WIDEN RAMPS 1 TO 2 LANES, AND EXTEND RAMPS WITH ACCELERATION/DECELERATION LANES (EA: 0K730K)	\$47,000
RIVERSIDE	STATE HIGHWAY	RIV071252	10	ON I-10 IN INDIO AT JACKSON ST IC (AT PM 55.575): RECONSTRUCT/WIDEN IC FROM 2 TO 6 THROUGH LANES INCLUDING BRIDGE OVER WHITEWATER RIVER CHANNEL FROM SHOWCASE PKWY TO SOUTH OF WHITEWATER RIVER CHANNEL, RECONSTRUCT/WIDEN RAMPS 1 TO 2 LANES, MODIFY TRAFFIC SIGNALS	\$56,000
RIVERSIDE	STATE HIGHWAY	RIV071253	10	ON I-10 IN INDIO AT GOLF CENTER PKWY IC: RECONSTRUCT/WIDEN IC FROM 4 TO 6 THROUGH LANES INCLUDING BRIDGE OVER WHITEWATER RIVER CHANNEL BETWEEN AVENUE 44 TO S/O WHITEWATER RIVER CHANNEL, RECONSTRUCT/WIDEN RAMPS 1 TO 2 LANES, AND EXTEND RAMPS WITH ACCELERATION/DECELERATION LANES	\$27,000
RIVERSIDE	STATE HIGHWAY	RIV030901	10	ON I-10 IN EASTERN COACHELLA (AT 3.4 MILES E/O DILLON RD & 9.1 MILES W/O CACTUS CITY SRRA): CONSTRUCT NEW 6 THROUGH LANE AVENUE 50 IC (3 LANES EACH DIR, APPROX 600' N/O I-10 AND 1100' S/O I-10), EB EXIT RAMP (3 LANES), WB EXIT RAMP (2 LANES), EB & WB ENTRY RAMPS (2 LANES) & ADD ACC LN 3,800' W/B DIR, WEST OF IC (EA-45210)	\$186,000
RIVERSIDE	STATE HIGHWAY	RIV10302	10	ON I-10 IN THE CITY OF BLYTHE - PROVIDE NEW W/B ON AND W/B OFF RAMPS TO HOBSON WAY APPROX 3,500' W/O EXISTING RAMPS TO RIVIERA DR/ INSPECTION STATION. THE NEW RAMPS WILL REPLACE EXISTING CONNECTION TO RIVIERA DR. \$93 TC UTILIZATION FY 2014/15 FOR STPL CONSTRUCTION FUNDS.	\$4,343
RIVERSIDE	STATE HIGHWAY	RIV031215	15	FRENCH VALLEY PKWY IC/ARTERIAL PHASES: CONSTRUCT 6 LN IC (JEFFERSON TO YNEZ) & RAMPS, NB/SB AUX LN, CD LNS (3 LNS NB&SB) & MODIFY WINCHESTER RD IC (I-215 PM: 8.43-9.75) (EA-43270)	\$187,691
RIVERSIDE	STATE HIGHWAY	RIV62031	15	I-15/SR79 SO. IC: REMOVE SB EXIT RAMP, ADD NEW SB EXIT LOOP RAMP, REALIGN SB EXIT RAMP (2 LNS) W/AUX LN, WIDEN SB ENTRY 1 TO 3, NB EXIT 1 TO 4, NB ENTRY 1 TO 3 & RECON SR79S.	\$45,841
RIVERSIDE	STATE HIGHWAY	RIV080901	15	AT I-15/MURRIETA HOT SPRINGS RD IC - CONSTRUCT NEW NB LOOP ON RAMP AND REALIGN EXISTING NB OFF RAMP (EA: 0J650K)	\$8,100
